THE ADVISORS' INNER CIRCLE FUND III**

May 1, 2024

**Investment Adviser:
PENN MUTUAL ASSET MANAGEMENT, LLC**

This Statement of Additional Information ("SAI") is not a prospectus. This SAI is intended to provide additional information regarding the activities and operations of The Advisors' Inner Circle Fund III (the "Trust"), the Penn Mutual AM Strategic Income Fund (the "Strategic Income Fund") and the Penn Mutual AM 1847 Income Fund (the "1847 Income Fund") (each, a "Fund" and collectively, the "Funds"). This SAI is incorporated by reference into and should be read in conjunction with the Funds' prospectus dated May 1, 2024, as it may be amended from time to time (the "Prospectus"). Capitalized terms not defined herein are defined in the Prospectus. The most recent Annual Report for the Funds, which includes the Funds' audited financial statements dated December 31, 2023, is incorporated by reference into this SAI. Shareholders may obtain copies of the Prospectus or Annual or Semi-Annual Reports free of charge by writing to the Funds at Penn Mutual AM Funds, P.O. Box 219009, Kansas City, MO 64121-9009 (Express Mail Address: Penn Mutual AM Funds, c/o SS&C Global Investor & Distribution Solutions, Inc., 430 West 7th Street, Kansas City, MO 64105), or calling the Funds toll-free at 877-PMA-MLLC (877-762-6552).

THE TRUST

General. Each Fund is a separate series of the Trust. The Trust is an open-end investment management company established under Delaware law as a Delaware statutory trust under a Declaration of Trust dated December 4, 2013, as amended September 10, 2020 (the “Declaration of Trust”). The Declaration of Trust permits the Trust to offer separate series (“funds”) of shares of beneficial interest (“shares”). The Trust reserves the right to create and issue shares of additional funds. Each fund is a separate mutual fund or exchange traded fund (“ETF”), and each share of each fund represents an equal proportionate interest in that fund. All consideration received by the Trust for shares of any fund, and all assets of such fund, belong solely to that fund and would be subject to any liabilities related thereto. Each fund of the Trust pays its (i) operating expenses, including fees of its service providers, expenses of preparing prospectuses, proxy solicitation material and reports to shareholders, costs of custodial services and registering its shares under federal and state securities laws, pricing and insurance expenses, brokerage costs, interest charges, taxes, and organization expenses and (ii) pro rata share of the fund’s other expenses, including audit and legal expenses. Expenses attributable to a specific fund shall be payable solely out of the assets of that fund. Expenses not attributable to a specific fund are allocated across all of the funds on the basis of relative net assets. The other funds of the Trust are described in one or more separate statements of additional information.

Voting Rights. Each shareholder of record is entitled to one vote for each share held on the record date for the meeting. Each Fund will vote separately on matters relating solely to it. As a Delaware statutory trust, the Trust is not required, and does not intend, to hold annual meetings of shareholders. Approval of shareholders will be sought, however, for certain changes in the operation of the Trust and for the election of members of the Board of Trustees of the Trust (each, a “Trustee” and collectively, the “Trustees” or the “Board”) under certain circumstances. Under the Declaration of Trust, the Trustees have the power to liquidate each Fund without shareholder approval. While the Trustees have no present intention of exercising this power, they may do so if any Fund fails to reach a viable size within a reasonable amount of time or for such other reasons as may be determined by the Board.

In addition, a Trustee may be removed by the remaining Trustees or by shareholders at a special meeting called upon written request of shareholders owning at least 10% of the outstanding shares of the Trust. In the event that such a meeting is requested, the Trust will provide appropriate assistance and information to the shareholders requesting the meeting.

Any series of the Trust may reorganize or merge with one or more other series of the Trust or of another investment company. Any such reorganization or merger shall be pursuant to the terms and conditions specified in an agreement and plan of reorganization authorized and approved by the Trustees and entered into by the relevant series in connection therewith. In addition, such reorganization or merger may be authorized by vote of a majority of the Trustees then in office and, to the extent permitted by applicable law and the Declaration of Trust, without the approval of shareholders of any series.

DESCRIPTION OF PERMITTED INVESTMENTS

Each Fund’s investment objective and principal investment strategies are described in the Prospectus. Each Fund is classified as a “diversified” investment company under the Investment Company Act of 1940, as amended (the “1940 Act”). This means that with respect to 75% of its total assets, a Fund may not purchase securities of any issuer (other than obligations of, or guaranteed by, the U.S. government or its agencies or instrumentalities, or securities of other investment companies) if, as a result, more than 5% of the Fund’s total assets would be invested in the securities of such issuer, or more than 10% of the issuer’s voting securities would be held by the Fund. Under applicable federal securities laws, the diversification of a mutual fund’s holdings is measured at the time a fund purchases a security. If a Fund holds securities that perform well on a relative basis, the value of those securities could appreciate such that the value of the Fund’s securities that constitute more than 5% of the Fund’s total assets, in the aggregate, might exceed 25% of the Fund’s total assets. In these circumstances, the Adviser might determine that it is in the best interests of the Fund’s shareholders not to reduce one or more of the Fund’s holdings in securities that constitute more than 5% of the Fund’s total assets. If the Adviser makes such a determination, the Fund’s holdings in such securities would continue to exceed 25% of the Fund’s total assets, and the Fund would not purchase any additional shares of securities that constituted more than 5% of the Fund’s total assets. The Fund would continue to qualify as a diversified fund under applicable federal securities laws. If more than 25% of a Fund’s assets were invested, in the aggregate, in securities of issuers that individually represented more than 5% of the Fund’s total assets, the Fund would be subject to the risk that its performance could be disproportionately affected by the performance of such securities.

The following information supplements, and should be read in conjunction with, the Prospectus. The following are descriptions of the permitted investments and investment practices of the Funds and the associated risk factors. The Funds may invest in any of the following instruments or engage in any of the following investment practices unless this investment or activity is inconsistent with or is not permitted by a Fund's stated investment policies, including those stated below.

American Depositary Receipts (“ADRs”). ADRs, as well as other “hybrid” forms of ADRs, including European Depositary Receipts (“EDRs”) and Global Depositary Receipts (“GDRs”), are certificates evidencing ownership of shares of a foreign issuer. Depositary receipts are securities that evidence ownership interests in a security or a pool of securities that have been deposited with a “depository” and may be sponsored or unsponsored. These certificates are issued by depository banks and generally trade on an established market in the United States or elsewhere. The underlying shares are held in trust by a custodian bank or similar financial institution in the issuer's home country. The depository bank may not have physical custody of the underlying securities at all times and may charge fees for various services, including forwarding dividends and interest and corporate actions. ADRs are alternatives to directly purchasing the underlying foreign securities in their national markets and currencies. However, ADRs continue to be subject to many of the risks associated with investing directly in foreign securities.

For ADRs, the depository is typically a U.S. financial institution and the underlying securities are issued by a foreign issuer. For other depositary receipts, the depository may be a foreign or a U.S. entity, and the underlying securities may have a foreign or a U.S. issuer. Depositary receipts will not necessarily be denominated in the same currency as their underlying securities. Generally, ADRs are issued in registered form, denominated in U.S. dollars, and designed for use in the U.S. securities markets. Other depositary receipts, such as GDRs and EDRs, may be issued in bearer form and denominated in other currencies, and are generally designed for use in securities markets outside the U.S. While the two types of depositary receipt facilities (unsponsored or sponsored) are similar, there are differences regarding a holder's rights and obligations and the practices of market participants. A depository may establish an unsponsored facility without participation by (or acquiescence of) the underlying issuer; typically, however, the depository requests a letter of non-objection from the underlying issuer prior to establishing the facility. Holders of unsponsored depositary receipts generally bear all the costs of the facility. The depository usually charges fees upon deposit and withdrawal of the underlying securities, the conversion of dividends into U.S. dollars or other currency, the disposition of non-cash distributions, and the performance of other services.

Sponsored depositary receipt facilities are created in generally the same manner as unsponsored facilities, except that sponsored depositary receipts are established jointly by a depository and the underlying issuer through a deposit agreement. The deposit agreement sets out the rights and responsibilities of the underlying issuer, the depository, and the depositary receipt holders. With sponsored facilities, the underlying issuer typically bears some of the costs of the depositary receipts (such as dividend payment fees of the depository), although most sponsored depositary receipts agree to distribute notices of shareholders meetings, voting instructions, and other shareholder communications and information to the depository receipt holders at the underlying issuer's request. The depository of an unsponsored facility frequently is under no obligation to distribute shareholder communications received from the issuer of the deposited security or to pass through, to the holders of the receipts, voting rights with respect to the deposited securities.

For purposes of a Fund's investment policies, investments in depositary receipts will be deemed to be investments in the underlying securities. Thus, a depositary receipt representing ownership of common stock will be treated as common stock. Depositary receipts do not eliminate all of the risks associated with directly investing in the securities of foreign issuers.

Investments in the securities of foreign issuers may subject a Fund to investment risks that differ in some respects from those related to investments in securities of U.S. issuers. These risks include future adverse political and economic developments, possible imposition of withholding taxes on income, possible seizure, nationalization or expropriation of foreign deposits, possible establishment of exchange controls or taxation at the source or greater fluctuation in value due to changes in exchange rates. Foreign issuers of securities often engage in business practices different from those of domestic issuers of similar securities, and there may be less information publicly available about foreign issuers. In addition, foreign issuers are, generally speaking, subject to less government supervision and regulation and different accounting treatment than are those in the United States.

Equity Securities. Equity securities represent ownership interests in a company or partnership and consist of common stocks, preferred stocks, warrants and rights to acquire common stock, securities convertible into common stock, and investments in master limited partnerships ("MLPs"). Investments in equity securities in general are subject to market risks that may cause their prices to fluctuate over time. Fluctuations in the value of equity securities in which a Fund invests will cause the net asset value ("NAV") of the Fund to fluctuate. The Funds may purchase equity securities traded on global securities exchanges or the over-the-counter market. Equity securities are described in more detail below:

- **Common Stock.** Common stock represents an equity or ownership interest in an issuer. In the event an issuer is liquidated or declares bankruptcy, the claims of owners of bonds and preferred stock take precedence over the claims of those who own common stock.
- **Preferred Stock.** Preferred stock represents an equity or ownership interest in an issuer that pays dividends at a specified rate and that has precedence over common stock in the payment of dividends. In the event an issuer is liquidated or declares bankruptcy, the claims of owners of bonds take precedence over the claims of those who own preferred and common stock.
- **Alternative Entity Securities.** Alternative entity securities are the securities of entities that are formed as limited partnerships, limited liability companies, business trusts or other non-corporate entities that are similar to common or preferred stock of corporations.
- **Exchange-Traded Funds ("ETFs").** An ETF is a fund whose shares are bought and sold on a securities exchange as if it were a single security. An ETF holds a portfolio of securities designed to track a particular market segment or index. Some examples of ETFs are SPDRs[®], DIAMONDSSM, NASDAQ 100 Index Tracking StockSM ("QQQsSM"), and iShares[®]. A Fund could purchase an ETF to temporarily gain exposure to a portion of the U.S. or foreign market while awaiting an opportunity to purchase securities directly. Similarly, a Fund may establish a short position in an ETF to gain inverse exposure to a portion of the U.S. or foreign markets. The risks of owning an ETF generally reflect the risks of owning the securities comprising the index which an index ETF is designed to track or the other holdings of an active or index ETF, although lack of liquidity in an ETF could result in it being more volatile than the tracked index or underlying holdings, and ETFs have management fees that increase their costs versus the costs of owning the underlying holdings directly. See also "Securities of Other Investment Companies" below.

- **Rights and Warrants.** A right is a privilege granted to existing shareholders of a corporation to subscribe to shares of a new issue of common stock before it is issued. Rights normally have a short life, usually two to four weeks, are freely transferable and entitle the holder to buy the new common stock at a lower price than the public offering price. Warrants are securities that are usually issued together with a debt security or preferred stock and that give the holder the right to buy proportionate amount of common stock at a specified price. Warrants are freely transferable and are traded on major exchanges. Unlike rights, warrants normally have a life that is measured in years and entitles the holder to buy common stock of a company at a price that is usually higher than the market price at the time the warrant is issued. Corporations often issue warrants to make the accompanying debt security more attractive.

An investment in warrants and rights may entail greater risks than certain other types of investments. Generally, rights and warrants do not carry the right to receive dividends or exercise voting rights with respect to the underlying securities, and rights and warrants do not represent any rights in the assets of the issuer. In addition, their value does not necessarily change with the value of the underlying securities, and they cease to have value if they are not exercised on or before their expiration date. Investing in rights and warrants increases the potential profit or loss to be realized from the investment as compared with investing the same amount in the underlying securities.

- **Convertible Securities.** Convertible securities are bonds, debentures, notes, preferred stocks or other securities that may be converted or exchanged (by the holder or by the issuer) into shares of the underlying common stock (or cash or securities of equivalent value) at a stated exchange ratio. A convertible security may also be called for redemption or conversion by the issuer after a particular date and under certain circumstances (including a specified price) established upon issue. If a convertible security held by a Fund is called for redemption or conversion, the Fund could be required to tender it for redemption, convert it into the underlying common stock, or sell it to a third party.

Convertible securities generally have less potential for gain or loss than common stocks. Convertible securities generally provide yields higher than the underlying common stocks, but generally lower than comparable non-convertible securities. Because of this higher yield, convertible securities generally sell at a price above their “conversion value,” which is the current market value of the stock to be received upon conversion. The difference between this conversion value and the price of convertible securities will vary over time depending on changes in the value of the underlying common stocks and interest rates. When the underlying common stocks decline in value, convertible securities will tend not to decline to the same extent because of the interest or dividend payments and the repayment of principal at maturity for certain types of convertible securities. However, securities that are convertible other than at the option of the holder generally do not limit the potential for loss to the same extent as securities convertible at the option of the holder. When the underlying common stocks rise in value, the value of convertible securities may also be expected to increase. At the same time, however, the difference between the market value of convertible securities and their conversion value will narrow, which means that the value of convertible securities will generally not increase to the same extent as the value of the underlying common stocks. Because convertible securities may also be interest-rate sensitive, their value may increase as interest rates fall and decrease as interest rates rise. Convertible securities are also subject to credit risk, and are often lower-quality securities.

General Risks of Investing in Stocks. While investing in stocks allows investors to participate in the benefits of owning a company, such investors must accept the risks of ownership. Unlike bondholders, who have preference to a company’s earnings and cash flow, preferred stockholders, followed by common stockholders in order of priority, are entitled only to the residual amount after a company meets its other obligations. For this reason, the value of a company’s stock will usually react more strongly to actual or perceived changes in the company’s financial condition or prospects than its debt obligations. Stockholders of a company that fares poorly can lose money.

Stock markets tend to move in cycles with short or extended periods of rising and falling stock prices. The value of a company's stock may fall because of:

- Factors that directly relate to that company, such as decisions made by its management or lower demand for the company's products or services;
- Factors affecting an entire industry, such as increases in production costs; and
- Changes in general financial market conditions that are relatively unrelated to the company or its industry, such as changes in interest rates, currency exchange rates, or inflation rates.

Because preferred stock is generally junior to debt securities and other obligations of the issuer, deterioration in the credit quality of the issuer will cause greater changes in the value of a preferred stock than in a more senior debt security with similar stated yield characteristics.

Real Estate Investment Trusts ("REITs"). A U.S. REIT is a corporation or business trust (that would otherwise be taxed as a corporation) which meets the definitional requirements of the Internal Revenue Code of 1986, as amended (the "Code"). The Code permits a qualifying REIT to deduct from taxable income the dividends paid, thereby effectively eliminating corporate level federal income tax. To meet the definitional requirements of the Code, a REIT must, among other things: invest substantially all of its assets in interests in real estate (including mortgages and other REITs), cash and government securities; derive most of the REIT's income from rents from real property or interest on loans secured by mortgages on real property; and distribute annually 90% or more of the REIT's otherwise taxable income to shareholders. Although the REIT structure originated in the U.S., a number of countries around the world have adopted, or are considering adopting, similar REIT and REIT-like structures.

REITs are sometimes informally characterized as Equity REITs and Mortgage REITs. An Equity REIT invests primarily in the fee ownership or leasehold ownership of land and buildings; a Mortgage REIT invests primarily in mortgages on real property, which may secure construction, development or long-term loans.

REITs in which a Fund invests may be affected by changes in underlying real estate values, which may have an exaggerated effect to the extent that REITs in which the Fund invests may concentrate investments in particular geographic regions or property types. Additionally, rising interest rates may cause investors in REITs to demand a higher annual yield from future distributions, which may in turn decrease market prices for equity securities issued by REITs. Rising interest rates also generally increase the costs of obtaining financing, which could cause the value of the Fund's investments to decline. During periods of declining interest rates, certain Mortgage REITs may hold mortgages that the mortgagors elect to prepay, which prepayment may diminish the yield on securities issued by such Mortgage REITs. In addition, Mortgage REITs may be affected by the ability of borrowers to repay when due the debt extended by the REIT and Equity REITs may be affected by the ability of tenants to pay rent.

Certain REITs have relatively small market capitalization, which may tend to increase the volatility of the market price of securities issued by such REITs. Furthermore, REITs are dependent upon specialized management skills, have limited diversification and, therefore, are subject to risks inherent in operating and financing a limited number of projects. By investing in REITs indirectly through a Fund, a shareholder will bear not only his proportionate share of the expenses of the Fund, but also, indirectly, similar expenses of the REITs. REITs depend generally on their ability to generate cash flow to make distributions to shareholders.

In addition to these risks, Equity REITs may be affected by changes in the value of the underlying property owned by the trusts, while Mortgage REITs may be affected by the quality of any credit extended. Further, Equity and Mortgage REITs are dependent upon management skills and generally may not be diversified. Equity and Mortgage REITs are also subject to heavy cash flow dependency defaults by borrowers and self-liquidation. In addition, Equity and Mortgage REITs could possibly fail to qualify for tax free pass-through of income under the Code or to maintain their exemptions from registration under the 1940 Act. The above factors may also adversely affect a borrower's or a lessee's ability to meet its obligations to the REIT. In the event of default by a borrower or lessee, the REIT may experience delays in enforcing its rights as a mortgagee or lessor and may incur substantial costs associated with protecting its investments.

Micro, Small, and Medium Capitalization Issuers. Investing in equity securities of micro, small, and medium capitalization companies often involves greater risk than is customarily associated with investments in larger capitalization companies. This increased risk may be due to the greater business risks of smaller size, limited markets and financial resources, narrow product lines, and frequent lack of depth of management. The securities of micro and smaller companies are often traded in the over-the-counter market and even if listed on a national securities exchange may not be traded in volumes typical for that exchange. Consequently, the securities of micro and smaller companies are less likely to be liquid, may have limited market stability, and may be subject to more abrupt or erratic market movements than securities of larger, more established growth companies or the market averages in general.

Initial Public Offerings ("IPOs"). A Fund may invest a portion of its assets in securities of companies offering shares in IPOs. IPOs may have a magnified performance impact on a fund with a small asset base. A Fund may hold IPO shares for a very short period of time, which may increase the turnover of the Fund's portfolio and may lead to increased expenses for the Fund, such as commissions and transaction costs. By selling IPO shares, a Fund may realize taxable gains it will subsequently distribute to shareholders. In addition, the market for IPO shares can be speculative and/or inactive for extended periods of time. The limited number of shares available for trading in some IPOs may make it more difficult for a Fund to buy or sell significant amounts of shares without an unfavorable impact on prevailing prices. Holders of IPO shares can be affected by substantial dilution in the value of their shares, by sales of additional shares and by concentration of control in existing management and principal shareholders.

A Fund's investment in IPO shares may include the securities of unseasoned companies (companies with less than three years of continuous operations), which presents risks considerably greater than common stocks of more established companies. These companies may have limited operating histories and their prospects for profitability may be uncertain. These companies may be involved in new and evolving businesses and may be vulnerable to competition and changes in technology, markets and economic conditions. These companies may be more dependent on key managers and third parties and may have limited product lines.

Master Limited Partnerships. MLPs are limited partnerships or limited liability companies, whose partnership units or limited liability interests are listed and traded on a U.S. securities exchange, and are treated as publicly-traded partnerships for federal income tax purposes. To qualify to be treated as a partnership for tax purposes, an MLP must receive at least 90% of its income from qualifying sources as set forth in section 7704(d) of the Code. These qualifying sources include activities such as the exploration, development, mining, production, processing, refining, transportation, storage and marketing of mineral or natural resources. To the extent that an MLP's interests are concentrated in a particular industry or sector, such as the energy sector, the MLP will be negatively impacted by economic events adversely impacting that industry or sector.

MLPs that are formed as limited partnerships generally have two classes of owners, the general partner and limited partners, while MLPs that are formed as limited liability companies generally have two analogous classes of owners, the managing member and the members. For purposes of this section, references to general partners also apply to managing members and references to limited partners also apply to members.

The general partner is typically owned by a major energy company, an investment fund, the direct management of the MLP or is an entity owned by one or more of such parties. The general partner may be structured as a private or publicly-traded corporation or other entity. The general partner typically controls the operations and management of the MLP through an equity interest of as much as 2% in the MLP plus, in many cases, ownership of common units and subordinated units. A holder of general partner interests can be liable under certain circumstances for amounts greater than the amount of the holder's investment in the general partner interest. General partner interests are not publicly-traded and generally cannot be converted into common units. The general partner interest can be redeemed by the MLP if the MLP unitholders choose to remove the general partner, typically with a supermajority vote by limited partner unitholders.

Limited partners own the remainder of the MLP through ownership of common units and have a limited role in the MLP's operations and management. Common units are listed and traded on U.S. securities exchanges, with their value fluctuating predominantly based on prevailing market conditions and the success of the MLP. Unlike owners of common stock of a corporation, owners of common units have limited voting rights and have no ability annually to elect directors. In the event of liquidation, common units have preference over subordinated units, but not over debt or preferred units, to the remaining assets of the MLP.

MLPs are typically structured such that common units and general partner interests have first priority to receive quarterly cash distributions up to an established minimum amount ("minimum quarterly distributions" or "MQD"). Common and general partner interests also accrue arrearages in distributions to the extent the MQD is not paid. Once common and general partner interests have been paid, subordinated units receive distributions of up to the MQD; however, subordinated units do not accrue arrearages. Distributable cash in excess of the MQD paid to both common and subordinated units is distributed to both common and subordinated units generally on a pro rata basis. The general partner also is eligible to receive incentive distributions if the general partner operates the business in a manner which results in distributions paid per common unit surpassing specified target levels. As the general partner increases cash distributions to the limited partners, the general partner receives an increasingly higher percentage of the incremental cash distributions. A common arrangement provides that the general partner can reach a tier where the general partner receives 50% of every incremental dollar paid to common and subordinated unit holders. These incentive distributions encourage the general partner to streamline costs, increase capital expenditures and acquire assets in order to increase the partnership's cash flow and raise the quarterly cash distribution in order to reach higher tiers. These results benefit all security holders of the MLP.

Foreign Securities. Foreign securities include equity securities of foreign entities, obligations of foreign branches of U.S. banks and of foreign banks, including, without limitation, European Certificates of Deposit, European Time Deposits, European Bankers' Acceptances, Canadian Time Deposits, Europaper and Yankee Certificates of Deposit, and investments in Canadian Commercial Paper and foreign securities. These instruments have investment risks that differ in some respects from those related to investments in obligations of U.S. domestic issuers. These risks include future adverse political and economic developments, the possible imposition of withholding taxes on interest or other income, possible seizure, nationalization, or expropriation of foreign deposits, the possible establishment of exchange controls or taxation at the source, greater fluctuations in value due to changes in exchange rates, or the adoption of other foreign governmental restrictions which might adversely affect the payment of principal and interest on such obligations. Such investments may also entail higher custodial fees and sales commissions than domestic investments. Foreign issuers of securities or obligations are often subject to accounting treatment and engage in business practices different from those respecting domestic issuers of similar securities or obligations. Foreign branches of U.S. banks and foreign banks may be subject to less stringent reserve requirements than those applicable to domestic branches of U.S. banks.

Investments in Emerging Markets. Investing in emerging markets involves additional risks and special considerations not typically associated with investing in other more established economies or markets. These risks may include: (i) increased risk of nationalization or expropriation of assets or confiscatory taxation; (ii) greater social, economic and political uncertainty, including war; (iii) higher dependence on exports and the corresponding importance of international trade; (iv) greater volatility, less liquidity and smaller capitalization of markets; (v) greater volatility in currency exchange rates; (vi) greater risk of inflation; (vii) greater controls on foreign investment and limitations on realization of investments, repatriation of invested capital and on the ability to exchange local currencies for U.S. dollars; (viii) increased likelihood of governmental involvement in and control over the economy; (ix) governmental decisions to cease support of economic reform programs or to impose centrally planned economies; (x) differences in auditing and financial reporting standards which may result in the unavailability of material information about issuers; (xi) less extensive regulation of the markets; (xii) longer settlement periods for transactions and less reliable clearance and custody arrangements; (xiii) less developed corporate laws regarding fiduciary duties of officers and directors and the protection of investors; (xiv) certain considerations regarding the maintenance of a Fund's securities with local brokers and securities depositories; and (xv) the imposition of withholding or other taxes on dividends, interest, capital gains, other income, or gross sale or disposition proceeds.

Repatriation of investment income, assets, and the proceeds of sales by foreign investors may require governmental registration and/or approval in some emerging market countries. A Fund could be adversely affected by delays in or a refusal to grant any required governmental registration or approval for such repatriation or by withholding taxes imposed by emerging market countries on interest or dividends paid on securities held by the Fund or gains from the disposition of these securities.

In emerging markets, there is often less government supervision and regulation of business and industry practices, stock exchanges, over-the-counter markets, brokers, dealers, counterparties and issuers than in other more established markets. Any regulatory supervision that is in place may be subject to manipulation or control. Some emerging market countries do not have mature legal systems comparable to those of more developed countries. Moreover, the process of legal and regulatory reform may not be proceeding at the same pace as market developments, which could result in investment risk. Legislation to safeguard the rights of private ownership may not yet be in place in certain areas, and there may be the risk of conflict among local, regional and national requirements. In certain cases, the laws and regulations governing investments in securities may not exist or may be subject to inconsistent or arbitrary appreciation or interpretation. Both the independence of judicial systems and their immunity from economic, political or nationalistic influences remain largely untested in many countries. A Fund may also encounter difficulties in pursuing legal remedies or in obtaining and enforcing judgments in local courts.

Eurobonds. A Eurobond is a fixed-income security denominated in U.S. dollars or another currency and sold to investors outside of the country whose currency is used. Eurobonds may be issued by government or corporate issuers and are typically underwritten by banks and brokerage firms from numerous countries. While Eurobonds typically pay principal and interest in Eurodollars or U.S. dollars held in banks outside of the United States, Eurobonds may pay principal and interest in other currencies.

Sovereign Debt Obligations. Sovereign debt obligations are issued or guaranteed by foreign governments or their agencies. Sovereign debt may be in the form of conventional securities or other types of debt instruments such as loans or loan participations. Governmental entities responsible for repayment of the debt may be unable or unwilling to repay principal and pay interest when due, and may require renegotiation or reschedule of debt payments. In addition, prospects for repayment of principal and payment of interest may depend on political as well as economic factors. Although some sovereign debt, such as Brady Bonds, is collateralized by U.S. government securities, repayment of principal and payment of interest is not guaranteed by the U.S. government.

Foreign Agency Debt Obligations. A Fund may invest in uncollateralized bonds issued by agencies, subdivisions or instrumentalities of foreign governments. Bonds issued by these foreign government agencies, subdivisions or instrumentalities are generally backed only by the creditworthiness and reputation of the entities issuing the bonds and may not be backed by the full faith and credit of the foreign government. Moreover, a foreign government that explicitly provides its full faith and credit to a particular entity may be, due to changed circumstances, unable or unwilling to provide that support. A foreign agency's operations and financial condition are influenced by the foreign government's economic and other policies. Changes to the financial condition or credit rating of a foreign government may cause the value of debt issued by that particular foreign government's agencies, subdivisions or instrumentalities to decline. During periods of economic uncertainty, the trading of foreign agency bonds may be less liquid while market prices may be more volatile than prices of other bonds. Additional risks associated with foreign agency investing include differences in accounting, auditing and financial reporting standards; adverse changes in investment or exchange control regulations; political instability; and potential restrictions on the flow of international capital.

Obligations of Supranational Entities. Supranational entities are entities established through the joint participation of several governments, and include the Asian Development Bank, World Bank, African Development Bank, European Economic Community, European Investment Bank, and the Nordic Investment Bank. The governmental members, or "stockholders," usually make initial capital contributions to the supranational entity and, in many cases, are committed to make additional capital contributions if the supranational entity is unable to repay its borrowings. There is no guarantee that one or more stockholders of a supranational entity will continue to make any necessary additional capital contributions. If such contributions are not made, the entity may be unable to pay interest or repay principal on its debt securities, and a Fund may lose money on these investments.

Investment Funds. Some emerging countries currently prohibit direct foreign investment in the securities of their companies. Certain emerging countries, however, permit indirect foreign investment in the securities of companies listed and traded on their stock exchanges through investment funds that these emerging countries have specifically authorized. Investments in these investment funds are subject to the provisions of the 1940 Act. If a Fund invests in these investment funds, shareholders will bear not only their proportionate share of the expenses (including operating expenses and the fees of the Adviser), but also will indirectly bear similar expenses of the underlying investment funds. In addition, these investment funds may trade at a premium over NAV.

Risks of Foreign Securities:

Foreign securities, foreign currencies, and securities issued by U.S. entities with substantial foreign operations may involve significant risks in addition to the risks inherent in U.S. investments.

Political and Economic Factors. Local political, economic, regulatory, or social instability, military action or unrest, or adverse diplomatic developments may affect the value of foreign investments. Listed below are some of the more important political and economic factors that could negatively affect an investment in foreign securities:

- The economies of foreign countries may differ from the economy of the United States in such areas as growth of GNP, rate of inflation, capital reinvestment, resource self-sufficiency, budget deficits, and national debt;
- Foreign governments sometimes participate to a significant degree, through ownership interests or regulation, in their respective economies. Actions by these governments could significantly influence the market prices of securities and payment of dividends;
- The economies of many foreign countries are dependent on international trade and their trading partners and these foreign countries could be severely affected if their trading partners were to enact protective trade barriers and economic conditions;
- The internal policies of a particular foreign country may be less stable than in the United States. Other countries face significant external political risks, such as possible claims of sovereignty by other countries or tense and sometimes hostile border clashes;
- A foreign government may act adversely to the interests of U.S. investors, including expropriation or nationalization of assets, confiscatory taxation and other restrictions on U.S. investment. A country may restrict or control foreign investments in its securities markets. These restrictions could limit a Fund's ability to invest in a particular country or make it very expensive for the Fund to invest in that country. Some countries require prior governmental approval or limit the types or amount of securities or companies in which a foreigner can invest. Other countries may restrict the ability of foreign investors to repatriate their investment income and capital gains; and
- Periodic U.S. Government restrictions on investments in issuers from certain foreign countries may result in a Fund having to sell such prohibited securities at inopportune times. Such prohibited securities may have less liquidity as a result of such U.S. Government designation and the market price of such prohibited securities may decline, which may cause the Fund to incur losses.

Given the increasing interdependence among global economies and markets, conditions in one country, region or market might adversely affect financial conditions or issuers in other countries, regions or markets. For example, on January 31, 2020, the United Kingdom (the "UK") formally withdrew from the EU (commonly referred to as "Brexit"). Following a transition period, the UK and the EU signed a post-Brexit trade agreement governing their future economic relationship on December 30, 2020. This agreement became effective on a provisional basis on January 1, 2021 and formally entered into force on May 1, 2021. While the full impact of Brexit is unknown, Brexit has already resulted in volatility in European and global markets. The effects of Brexit on the UK and EU economies and the broader global economy could be significant, resulting in negative impacts, such as business and trade disruptions, increased volatility and illiquidity, and potentially lower economic growth of markets in the UK, EU and globally, which could negatively impact the value of a Fund's investments. Brexit could also lead to legal uncertainty and politically divergent national laws and regulations while the new relationship between the UK and EU is further defined and the UK determines which EU laws to replace or replicate. Additionally, depreciation of the British pound sterling and/or the euro in relation to the U.S. dollar following Brexit could adversely affect Fund investments denominated in the British pound sterling and/or the euro, regardless of the performance of the investment.

In addition, on February 24, 2022, Russian military forces invaded Ukraine, significantly amplifying already existing geopolitical tensions among Russia, Ukraine, Europe, NATO, and the West. Following Russia's actions, various countries, including the U.S., Canada, the United Kingdom, Germany, and France, as well as the European Union, issued broad-ranging economic sanctions against Russia. The sanctions consist of the prohibition of trading in certain Russian securities and engaging in certain private transactions, the prohibition of doing business with certain Russian corporate entities, large financial institutions, officials and oligarchs, and the freezing of Russian assets. The extent and duration of the war in Ukraine and the longevity and severity of sanctions remain unknown, but they could have a significant adverse impact on the European economy as well as the price and availability of certain commodities, including oil and natural gas, throughout the world. These sanctions, and the resulting disruption of the Russian economy, may cause volatility in other regional and global markets and may negatively impact the performance of various sectors and industries, as well as companies in other countries, which could have a negative effect on the performance of a Fund, even if the Fund does not have direct exposure to securities of Russian issuers.

Whether or not a Fund invests in securities of issuers located in Europe or with significant exposure to European issuers or countries, these events could negatively affect the value and liquidity of the Fund's investments due to the interconnected nature of the global economy and capital markets.

Information and Supervision. There is generally less publicly-available information about foreign companies than companies based in the United States. For example, there are often no reports and ratings published about foreign companies comparable to the ones written about U.S. companies. Foreign companies are typically not subject to uniform accounting, auditing and financial reporting standards, practices and requirements comparable to those applicable to U.S. companies. The lack of comparable information makes investment decisions concerning foreign companies more difficult and less reliable than those concerning domestic companies.

Stock Exchange and Market Risk. The Adviser anticipates that in most cases an exchange or over-the-counter market located outside of the United States will be the best available market for foreign securities. Foreign stock markets, while growing in volume and sophistication, are generally not as developed as the markets in the United States. Foreign stock markets tend to differ from those in the United States in a number of ways.

Foreign stock markets:

- are generally more volatile than, and not as developed or efficient as, those in the United States;
- have substantially less volume;
- trade securities that tend to be less liquid and experience rapid and erratic price movements;
- have generally higher commissions and are subject to set minimum rates, as opposed to negotiated rates;
- employ trading, settlement, and custodial practices less developed than those in U.S. markets; and
- may have different settlement practices, which may cause delays and increase the potential for failed settlements.

Foreign markets may offer less protection to shareholders than U.S. markets because:

- foreign accounting, auditing, and financial reporting requirements may render a foreign corporate balance sheet more difficult to understand and interpret than one subject to U.S. law and standards;
- adequate public information on foreign issuers may not be available, and it may be difficult to secure dividends and information regarding corporate actions on a timely basis;
- in general, there is less overall governmental supervision and regulation of securities exchanges, brokers, and listed companies than in the United States;
- over-the-counter markets tend to be less regulated than stock exchange markets and, in certain countries, may be totally unregulated;

- economic or political concerns may influence regulatory enforcement and may make it difficult for shareholders to enforce their legal rights; and
- restrictions on transferring securities within the United States or to U.S. persons may make a particular security less liquid than foreign securities of the same class that are not subject to such restrictions.

Foreign Currency Risk. While the Funds denominate their NAV in U.S. dollars, the securities of foreign companies are frequently denominated in foreign currencies. Thus, a change in the value of a foreign currency against the U.S. dollar will result in a corresponding change in value of securities denominated in that currency. Some of the factors that may impair the investments denominated in a foreign currency are:

- It may be expensive to convert foreign currencies into U.S. dollars and vice versa;
- Complex political and economic factors may significantly affect the values of various currencies, including the U.S. dollar, and their exchange rates;
- Government intervention may increase risks involved in purchasing or selling foreign currency options, forward contracts and futures contracts, since exchange rates may not be free to fluctuate in response to other market forces;
- There may be no systematic reporting of last sale information for foreign currencies or regulatory requirement that quotations available through dealers or other market sources be firm or revised on a timely basis;
- Available quotation information is generally representative of very large round-lot transactions in the inter-bank market and thus may not reflect exchange rates for smaller odd-lot transactions (less than \$1 million) where rates may be less favorable; and
- The inter-bank market in foreign currencies is a global, around-the-clock market. To the extent that a market is closed while the markets for the underlying currencies remain open, certain markets may not always reflect significant price and rate movements.

Taxes. Certain foreign governments levy withholding taxes on dividend and interest income. Although in some countries it is possible for the Funds to recover a portion of these taxes, the portion that cannot be recovered will reduce the income the Funds receive from their investments.

Money Market Securities. Money market securities include: short-term U.S. government securities; custodial receipts evidencing separately traded interest and principal components of securities issued by the U.S. Treasury; commercial paper rated in the highest short-term rating category by a nationally recognized statistical ratings organization (“NRSRO”), such as S&P Global Ratings (“S&P”) or Moody’s Investor Services, Inc. (“Moody’s”), or determined by the Adviser to be of comparable quality at the time of purchase; short-term bank obligations (certificates of deposit, time deposits and bankers’ acceptances) of U.S. commercial banks with assets of at least \$1 billion as of the end of their most-recent fiscal-year; and repurchase agreements involving these securities. Each of these money market securities are described below. For a description of ratings, see “Appendix A – Description of Ratings” to this SAI.

Structured Notes

The Funds may invest in a broad category of instruments known as “structured notes.” These instruments are debt obligations issued by industrial corporations, financial institutions or governmental or international agencies. Traditional debt obligations typically obligate the issuer to repay the principal plus a specified rate of interest. Structured notes, by contrast, obligate the issuer to pay amounts of principal or interest that are determined by reference to changes in some external factor or factors, or the principal and interest rate may vary from the stated rate because of changes in these factors. For example, the issuer’s obligations could be determined by reference to changes in the value of a commodity (such as gold or oil) or commodity index, a foreign currency, an index of securities (such as the S&P 500 Index) or an interest rate (such as the U.S. Treasury bill rate). In some cases, the issuer’s obligations are determined by reference to changes over time in the difference (or “spread”) between two or more external factors (such as the U.S. prime lending rate and the total return of the stock market in a particular country, as measured by a stock index). In some cases, the issuer’s obligations may fluctuate inversely with changes in an external factor or factors (for example, if the U.S. prime lending rate goes up, the issuer’s interest payment obligations are reduced). In some cases, the issuer’s obligations may be determined by some multiple of the change in an external factor or factors (for example, three times the change in the U.S. Treasury bill rate). In some cases, the issuer’s obligations remain fixed (as with a traditional debt instrument) so long as an external factor or factors do not change by more than the specified amount (for example, if the value of a stock index does not exceed some specified maximum), but if the external factor or factors change by more than the specified amount, the issuer’s obligations may be sharply reduced.

Structured notes can serve many different purposes in the management of a Fund. For example, these notes can be used to increase a Fund's exposure to changes in the value of assets that the Fund would not ordinarily purchase directly (such as currencies traded in a market that is not open to U.S. investors). These notes also can be used to hedge the risks associated with other investments a Fund holds. For example, if a structured note has an interest rate that fluctuates inversely with general changes in a country's stock market index, the value of the structured note would generally move in the opposite direction to the value of holdings of stocks in that market, thus moderating the effect of stock market movements on the value of the Fund's portfolio as a whole.

Structured notes involve special risks. As with any debt obligation, structured notes involve the risk that the issuer will become insolvent or otherwise default on its payment obligations. This risk is in addition to the risk that the issuer's obligations (and thus the value of a Fund's investment) will be reduced because of adverse changes in the external factor or factors to which the obligations are linked. The value of structured notes will in many cases be more volatile (that is, will change more rapidly or severely) than the value of traditional debt instruments. Volatility will be especially high if the issuer's obligations are determined by reference to some multiple of the change in the external factor or factors. Many structured notes have limited or no liquidity, so that a Fund would be unable to dispose of the investment prior to maturity. As with all investments, successful use of structured notes depends in significant part on the accuracy of the Adviser's analysis of the issuer's creditworthiness and financial prospects, and of the Adviser's forecast as to changes in relevant economic and financial market conditions and factors. In instances where the issuer of a structured note is a foreign entity, the usual risks associated with investments in foreign securities (described above) apply. Structured notes may be considered derivative securities.

U.S. Government Securities. The Funds may invest in U.S. government securities. Securities issued or guaranteed by the U.S. government or its agencies or instrumentalities include U.S. Treasury securities, which are backed by the full faith and credit of the U.S. Treasury and which differ only in their interest rates, maturities, and times of issuance. U.S. Treasury bills have initial maturities of one-year or less; U.S. Treasury notes have initial maturities of one to ten years; and U.S. Treasury bonds generally have initial maturities of greater than ten years. U.S. Treasury notes and bonds typically pay coupon interest semi-annually and repay the principal at maturity. Certain U.S. government securities are issued or guaranteed by agencies or instrumentalities of the U.S. government including, but not limited to, obligations of U.S. government agencies or instrumentalities such as the Federal National Mortgage Association ("Fannie Mae"), the Government National Mortgage Association ("Ginnie Mae"), the Small Business Administration, the Federal Farm Credit Administration, the Federal Home Loan Banks, Banks for Cooperatives (including the Central Bank for Cooperatives), the Federal Land Banks, the Federal Intermediate Credit Banks, the Tennessee Valley Authority, the Export-Import Bank of the United States, the Commodity Credit Corporation, the Federal Financing Bank, the Student Loan Marketing Association, the National Credit Union Administration, and the Federal Agricultural Mortgage Corporation ("Farmer Mac").

Some obligations issued or guaranteed by U.S. government agencies and instrumentalities, including, for example, Ginnie Mae pass-through certificates, are supported by the full faith and credit of the U.S. Treasury. Other obligations issued by or guaranteed by federal agencies, such as those securities issued by Fannie Mae, are supported by the discretionary authority of the U.S. government to purchase certain obligations of the federal agency. Additionally, some obligations are issued by or guaranteed by federal agencies, such as those of the Federal Home Loan Banks, which are supported by the right of the issuer to borrow from the U.S. Treasury. While the U.S. government provides financial support to such U.S. government-sponsored federal agencies, no assurance can be given that the U.S. government will always do so, since the U.S. government is not so obligated by law. Guarantees of principal by U.S. government agencies or instrumentalities may be a guarantee of payment at the maturity of the obligation so that in the event of a default prior to maturity there might not be a market and thus no means of realizing on the obligation prior to maturity. Guarantees as to the timely payment of principal and interest do not extend to the value or yield of these securities nor to the value of the Funds' shares.

On September 7, 2008, the U.S. Treasury announced a federal takeover of Fannie Mae and the Federal Home Loan Mortgage Corporation ("Freddie Mac"), placing the two federal instrumentalities in conservatorship. Under the takeover, the U.S. Treasury agreed to acquire \$1 billion of senior preferred stock of each instrumentality and obtained warrants for the purchase of common stock of each instrumentality (the "Senior Preferred Stock Purchase Agreement" or "Agreement"). Under the Agreement, the U.S. Treasury pledged to provide up to \$200 billion per instrumentality as needed, including the contribution of cash capital to the instrumentalities in the event their liabilities exceed their assets. This was intended to ensure that the instrumentalities maintain a positive net worth and meet their financial obligations, preventing mandatory triggering of receivership. On December 24, 2009, the U.S. Treasury announced that it was amending the Agreement to allow the \$200 billion cap on the U.S. Treasury's funding commitment to increase as necessary to accommodate any cumulative reduction in net worth through the end of 2012. The unlimited support the U.S. Treasury extended to the two companies expired at the beginning of 2013 – Fannie Mae's support is now capped at \$125 billion and Freddie Mac has a limit of \$149 billion.

On August 17, 2012, the U.S. Treasury announced that it was again amending the Agreement to terminate the requirement that Fannie Mae and Freddie Mac each pay a 10 percent annual dividend. Instead, the companies will transfer to the U.S. Treasury on a quarterly basis all profits earned during a quarter that exceed a capital reserve amount. The capital reserve amount was \$3 billion in 2013, and decreased by \$600 million in each subsequent year through 2017. It is believed that this amendment put Fannie Mae and Freddie Mac in a better position to service their debt because it eliminated the need for the companies to have to borrow from the U.S. Treasury to make fixed dividend payments. As part of the new terms, Fannie Mae and Freddie Mac also will be required to reduce their investment portfolios over time. On December 21, 2017, the U.S. Treasury announced that it was again amending the Agreement to reinstate the \$3 billion capital reserve amount. On September 30, 2019, the U.S. Treasury announced that it was further amending the Agreement, now permitting Fannie Mae and Freddie Mac to retain earnings beyond the \$3 billion capital reserves previously allowed through the 2017 amendment. Fannie Mae and Freddie Mac are now permitted to maintain capital reserves of \$25 billion and \$20 billion, respectively.

Fannie Mae and Freddie Mac are the subject of several continuing class action lawsuits and investigations by federal regulators over certain accounting, disclosure or corporate governance matters, which (along with any resulting financial restatements) may adversely affect the guaranteeing entities. Importantly, the future of the entities is in serious question as the U.S. government reportedly is considering multiple options, ranging from nationalization, privatization, consolidation, or abolishment of the entities.

U.S. Treasury Obligations. U.S. Treasury obligations consist of direct obligations of the U.S. Treasury, including Treasury bills, notes and bonds, and separately-traded interest and principal component parts of these obligations, including those transferable through the Federal book-entry system known as Separate Trading of Registered Interest and Principal of Securities ("STRIPS"). The STRIPS program lets investors hold and trade the individual interest and principal components of eligible Treasury notes and bonds as separate securities. Under the STRIPS program, the principal and interest components are separately issued by the U.S. Treasury at the request of depository financial institutions, which then trade the component parts separately.

Inflation Protected Securities. The Funds may invest in inflation protected securities, which are fixed-income securities whose value is periodically adjusted according to the rate of inflation. These securities may be issued by U.S. and foreign governments and corporations. Two structures are common. The U.S. Treasury and some other issuers utilize a structure that accrues inflation into the principal value of the bond. Most other issuers pay out the Consumer Price Index ("CPI") accruals as part of a semiannual coupon. Inflation protected securities issued by the U.S. Treasury have maturities of approximately five, ten or thirty years, although it is possible that securities with other maturities will be issued in the future. The U.S. Treasury securities pay interest on a semi-annual basis equal to a fixed percentage of the inflation adjusted principal amount. If the periodic adjustment rate measuring inflation falls, the principal value of inflation protected bonds will be adjusted downward, and consequently the interest payable on these securities (calculated with respect to a smaller principal amount) will be reduced. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed by the U.S. Treasury in the case of U.S. Treasury inflation indexed bonds, even during a period of deflation. However, the current market value of the bonds is not guaranteed and will fluctuate. The Funds also may invest in other U.S. and foreign inflation related bonds that may or may not provide a similar guarantee. If a guarantee of principal is not provided, the adjusted principal value of the bond to be repaid at maturity may be less than the original principal amount.

The value of inflation protected bonds is expected to change in response to changes in real interest rates. Real interest rates in turn are tied to the relationship between nominal interest rates and the rate of inflation. Therefore, if the rate of inflation rises at a faster rate than nominal interest rates, real interest rates might decline, leading to an increase in value of inflation protected bonds. In contrast, if nominal interest rates increase at a faster rate than inflation, real interest rates might rise, leading to a decrease in value of inflation protected bonds. While these securities are expected to be protected from long-term inflationary trends, short-term increases in inflation may lead to a decline in value. If interest rates rise due to reasons other than inflation (for example, due to changes in currency exchange rates), investors in these securities may not be protected to the extent that the increase is not reflected in the bond's inflation measure. The periodic adjustment of U.S. inflation protected bonds is tied to the non-seasonally adjusted U.S. City Average All Items Consumer Price Index for All Urban Consumers ("CPI-U"), published monthly by the U.S. Bureau of Labor Statistics. The CPI-U is a measurement of changes in the cost of living, made up of components such as housing, food, transportation and energy. Inflation indexed bonds issued by a foreign government are generally adjusted to reflect a comparable inflation index calculated by that government.

There can be no assurance that the CPI-U or any foreign inflation index will accurately measure the real rate of inflation in the prices of goods and services. Moreover, there can be no assurance that the rate of inflation in a foreign country will be correlated to the rate of inflation in the United States. Any increase in principal for an inflation protected security resulting from inflation adjustments is considered by the Internal Revenue Service ("IRS") to be taxable income in the year it occurs. A Fund's distributions to shareholders include interest income and the income attributable to principal adjustments, both of which will be taxable to shareholders. The tax treatment of the income attributable to principal adjustments may result in the situation where a Fund needs to make its required annual distributions to shareholders in amounts that exceed the cash received. As a result, the Fund may need to liquidate certain investments when it is not advantageous to do so. Also, if the principal value of an inflation protected security is adjusted downward due to deflation, amounts previously distributed in the taxable year may be characterized in some circumstances as a return of capital.

Municipal Securities. Municipal securities, including municipal bonds and municipal notes, consist of: (i) debt obligations issued by or on behalf of public authorities to obtain funds to be used for various public facilities, for refunding outstanding obligations, for general operating expenses and for lending such funds to other public institutions and facilities; and (ii) certain private activity and industrial development bonds issued by or on behalf of public authorities to obtain funds to provide for the construction, equipment, repair or improvement of privately-operated facilities.

Municipal bonds are debt obligations issued to obtain funds for various public purposes. Municipal bonds include general obligation bonds, revenue or special obligation bonds, private activity and industrial development bonds, moral obligation bonds and participation interests in municipal bonds. General obligation bonds are backed by the taxing power of the issuing municipality. Revenue or special obligation bonds are backed by the revenues of a project or facility, such as tolls from a toll bridge. Private activity or industrial development bonds are issued by or on behalf of public authorities to raise money to finance various privately-owned or -operated facilities for business and manufacturing, housing, sports and pollution control. These bonds are also used to finance public facilities such as airports, mass transit systems, ports, parking or sewage or solid waste disposal facilities and certain other facilities. The payment of the principal and interest on such bonds is dependent solely on the ability of the facility's user to meet its financial obligations and the pledge, if any, of real and personal property financed as security for such payment. Moral obligation bonds are normally issued by special purpose authorities. Moral obligation bonds are not backed by the full faith and credit of the issuing municipality, but generally are backed by the agreement of the issuing authority to request appropriations from the municipality's legislative body. Certificates of participation represent an interest in an underlying obligation or commitment, such as an obligation issued in connection with a leasing arrangement.

Municipal notes consist of general obligation notes, tax anticipation notes (notes sold to finance working capital needs of the issuer in anticipation of receiving taxes on a future date), revenue anticipation notes (notes sold to provide needed cash prior to receipt of expected non-tax revenues from a specific source), bond anticipation notes, tax and revenue anticipation notes, certificates of indebtedness, demand notes, and construction loan notes. The maturities of the instruments at the time of issue will generally range from three months to one year.

Commercial Paper. Commercial paper is the term used to designate unsecured short-term promissory notes issued by corporations and other entities. Maturities on these issues vary from a few to 270 days.

Investment Grade Fixed-Income Securities. Fixed-income securities are considered investment grade if they are rated in one of the four highest rating categories by an NRSRO, or, if not rated, are determined to be of comparable quality by the Adviser. See "Appendix A - Description of Ratings" for a description of the bond rating categories of several NRSROs. Ratings of each NRSRO represent its opinion of the safety of principal and interest payments (and not the market risk) of bonds and other fixed-income securities it undertakes to rate at the time of issuance. Ratings are not absolute standards of quality and may not reflect changes in an issuer's creditworthiness. Fixed-income securities rated BBB- or Baa3 lack outstanding investment characteristics, and have speculative characteristics as well. Securities rated Baa3 by Moody's or BBB- by S&P or higher are considered by those rating agencies to be "investment grade" securities, although Moody's considers securities rated in the Baa category to have speculative characteristics. While issuers of bonds rated BBB by S&P are considered to have adequate capacity to meet their financial commitments, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity to pay interest and principal for debt in this category than debt in higher rated categories. In the event a security owned by a Fund is downgraded below investment grade, the Adviser will review the situation and take appropriate action with regard to the security, including the actions discussed below.

Lower-rated Securities. Lower-rated bonds or non-investment grade bonds are commonly referred to as “junk bonds” or high-yield/high-risk securities. Lower-rated securities are defined as securities rated below the fourth highest rating category by an NRSRO. These obligations are speculative and may be in default.

Fixed-income securities are subject to the risk of an issuer’s ability to meet principal and interest payments on the obligation (credit risk), and may also be subject to price volatility due to such factors as interest rate sensitivity, market perception of the creditworthiness of the issuer and general market liquidity (market risk). Lower-rated or unrated (*i.e.*, high-yield) securities are more likely to react to developments affecting market and credit risk than are more highly rated securities, which primarily react to movements in the general level of interest rates. Yields and market values of high-yield securities will fluctuate over time, reflecting not only changing interest rates but the market’s perception of credit quality and the outlook for economic growth. When economic conditions appear to be deteriorating, medium to lower-rated securities may decline in value due to heightened concern over credit quality, regardless of prevailing interest rates. Investors should carefully consider the relative risks of investing in high-yield securities and understand that such securities are not generally meant for short-term investing.

Adverse economic developments can disrupt the market for high-yield securities, and severely affect the ability of issuers, especially highly leveraged issuers, to service their debt obligations or to repay their obligations upon maturity, which may lead to a higher incidence of default on such securities. In addition, the secondary market for high-yield securities may not be as liquid as the secondary market for more highly rated securities. As a result, the Adviser could find it more difficult to sell these securities or may be able to sell the securities only at prices lower than if such securities were highly liquid. Furthermore, a Fund may experience difficulty in valuing certain securities at certain times. Prices realized upon the sale of such lower-rated or unrated securities, under these circumstances, may be less than the prices used in calculating the Fund’s net asset value. Prices for high-yield securities may also be affected by legislative and regulatory developments.

Lower-rated or unrated fixed-income obligations also present risks based on payment expectations. If an issuer calls the obligations for redemption, a Fund may have to replace the security with a lower yielding security, resulting in a decreased return for investors. If a Fund experiences unexpected net redemptions, it may be forced to sell its higher rated securities, resulting in a decline in the overall credit quality of the Fund’s investment portfolio and increasing the exposure of the Fund to the risks of high-yield securities.

Debt Securities. Corporations and governments use debt securities to borrow money from investors. Most debt securities promise a variable or fixed rate of return and repayment of the amount borrowed at maturity. Some debt securities, such as zero-coupon bonds, do not pay current interest and are purchased at a discount from their face value.

Types of Debt Securities:

Corporate Bonds. Corporations issue bonds and notes to raise money for working capital or for capital expenditures such as plant construction, equipment purchases and expansion. In return for the money loaned to the corporation by investors, the corporation promises to pay investors interest, and repay the principal amount of the bond or note.

Mortgage-Backed Securities. Mortgage-backed securities are interests in pools of mortgage loans that various governmental, government-related and private organizations assemble as securities for sale to investors. Unlike most debt securities, which pay interest periodically and repay principal at maturity or on specified call dates, mortgage-backed securities make monthly payments that consist of both interest and principal payments. In effect, these payments are a “pass-through” of the monthly payments made by the individual borrowers on their mortgage loans, net of any fees paid to the issuer or guarantor of such securities. Since homeowners usually have the option of paying either part or all of the loan balance before maturity, the effective maturity of a mortgage-backed security is often shorter than is stated.

Governmental entities, private insurers and mortgage poolers may insure or guarantee the timely payment of interest and principal of these pools through various forms of insurance or guarantees, including individual loan, title, pool and hazard insurance and letters of credit. The Adviser will consider such insurance and guarantees and the creditworthiness of the issuers thereof in determining whether a mortgage-related security meets its investment quality standards. It is possible that the private insurers or guarantors will not meet their obligations under the insurance policies or guarantee arrangements.

Although the market for these securities is becoming increasingly liquid, securities issued by certain private organizations may not be readily marketable.

Commercial Mortgage-Backed Securities ("CMBS"). CMBS are generally multi-class or pass-through securities backed by a mortgage loan or a pool of mortgage loans secured by commercial property, such as industrial and warehouse properties, office buildings, retail space and shopping malls, multifamily properties and cooperative apartments. The commercial mortgage loans that underlie CMBS are generally not amortizing or not fully amortizing; that is, at their maturity date, repayment of the remaining principal balance or "balloon" is due and is repaid through the attainment of an additional loan or sale of the property.

Risks of Mortgage-Backed Securities. Yield characteristics of mortgage-backed securities differ from those of traditional debt securities in a variety of ways, the most-significant differences of mortgage-backed securities are:

- Payments of interest and principal are more frequent (usually monthly); and
- Falling interest rates generally cause individual borrowers to pay off their mortgage earlier than expected, which results in prepayments of principal on the securities, thus forcing a Fund to reinvest the money at a lower interest rate.

In addition to risks associated with changes in interest rates, a variety of economic, geographic, social, and other factors, such as the sale of the underlying property, refinancing or foreclosure, can cause investors to repay the loans underlying a mortgage-backed security sooner than expected. If the prepayment rates increase, a Fund may have to reinvest its principal at a rate of interest that is lower than the rate on existing mortgage-backed securities.

Asset-Backed Securities. These securities are interests in pools of a broad range of assets other than mortgages, such as automobile loans, computer leases and credit card receivables. As with mortgage-backed securities, these securities are pass-through. In general, the collateral supporting these securities is of shorter maturity than mortgage loans and is less likely to experience substantial prepayments with interest rate fluctuations, but may still be subject to prepayment risk.

Asset-backed securities present certain risks that are not presented by mortgage-backed securities. Primarily, these securities may not have the benefit of any security interest in the related assets, which raises the possibility that recoveries on repossessed collateral may not be available to support payments on these securities. For example, credit card receivables are generally unsecured and the debtors are entitled to the protection of a number of state and federal consumer credit laws, many of which allow debtors to reduce their balances by offsetting certain amounts owed on the credit cards. Most issuers of asset-backed securities backed by automobile receivables permit the servicers of such receivables to retain possession of the underlying obligations. If the servicer were to sell these obligations to another party, there is a risk that the purchaser would acquire an interest superior to that of the holders of the related asset-backed securities. Due to the quantity of vehicles involved and requirements under state laws, asset-backed securities backed by automobile receivables may not have a proper security interest in all of the obligations backing such receivables.

To lessen the effect of failures by obligors on underlying assets to make payments, the entity administering the pool of assets may agree to ensure the receipt of payments on the underlying pool occurs in a timely fashion (“liquidity protection”). In addition, asset-backed securities may obtain insurance, such as guarantees, policies or letters of credit obtained by the issuer or sponsor from third parties, for some or all of the assets in the pool (“credit support”). Delinquency or loss more than that anticipated or failure of the credit support could adversely affect the return on an investment in such a security.

The Funds may also invest in residual interests in asset-backed securities, which consist of the excess cash flow remaining after making required payments on the securities and paying related administrative expenses. The amount of residual cash flow resulting from a particular issue of asset-backed securities depends in part on the characteristics of the underlying assets, the coupon rates on the securities, prevailing interest rates, the amount of administrative expenses, and the actual prepayment experience on the underlying assets.

Mortgage Dollar Rolls. Mortgage “dollar rolls” or “covered rolls,” are transactions in which a Fund sells securities (usually mortgage-backed securities) and simultaneously contracts to repurchase typically in 30 or 60 days, substantially similar, but not identical, securities on a specified future date. The Funds may invest in mortgage dollar rolls. During the roll period, a Fund forgoes principal and interest paid on these securities. The Fund is compensated by the difference between the current sales price and the forward price for the future purchase (often referred to as the “drop”) as well as by the interest earned on the cash proceeds of the initial sale. At the end of the roll commitment period, the Fund may or may not take delivery of the securities it has contracted to purchase. Mortgage dollar rolls may be renewed prior to cash settlement and initially may involve only a firm commitment agreement by the Fund to buy a security. A “covered roll” is a specific type of mortgage dollar roll for which there is an offsetting cash position or cash equivalent securities position that matures on or before the forward settlement date of the mortgage dollar roll transaction. As used herein the term “mortgage dollar roll” refers to mortgage dollar rolls that are not “covered rolls.” If the broker-dealer to whom a Fund sells the security becomes insolvent, the Fund’s right to repurchase the security may be restricted. Other risks involved in entering into mortgage dollar rolls include the risk that the value of the security may change adversely over the term of the mortgage dollar roll and that the security a Fund is required to repurchase may be worth less than the security that the Fund originally held.

Mortgage Pass-Through Securities. The Funds may invest in mortgage pass-through securities. In the basic mortgage pass-through structure, mortgages with similar issuer, term and coupon characteristics are collected and aggregated into a “pool” consisting of multiple mortgage loans. The pool is assigned a CUSIP number and undivided interests in the pool are traded and sold as pass-through securities. The holder of the security is entitled to a pro rata share of principal and interest payments (including unscheduled prepayments) from the pool of mortgage loans.

An investment in a specific pool of pass-through securities requires an analysis of the specific prepayment risk of mortgages within the covered pool (since mortgagors typically have the option to prepay their loans). The level of prepayments on a pool of mortgage securities is difficult to predict and can impact the subsequent cash flows and value of the mortgage pool. In addition, when trading specific mortgage pools, precise execution, delivery and settlement arrangements must be negotiated for each transaction. These factors combine to make trading in mortgage pools somewhat cumbersome.

Most transactions in mortgage pass-through securities occur through the use of “to-be-announced” or “TBA transactions.” “TBA” refers to a commonly used mechanism for the forward settlement of U.S. agency mortgage pass-through securities, and not to a separate type of mortgage-backed security. TBA transactions generally are conducted in accordance with widely-accepted guidelines which establish commonly observed terms and conditions for execution, settlement and delivery. In a TBA transaction, the buyer and seller decide on general trade parameters, such as agency, settlement date, par amount, and price. The actual pools delivered generally are determined two days prior to settlement date. The Funds may use TBA transactions in several ways. For example, a Fund may enter into TBA agreements and “roll over” such agreements prior to the settlement date stipulated in such agreements. This type of TBA transaction is sometimes known as a “TBA roll.” In a “TBA roll” a Fund generally will sell the obligation to purchase the pools stipulated in the TBA agreement prior to the stipulated settlement date and will enter into a new TBA agreement for future delivery of pools of mortgage pass-through securities. In addition, a Fund may enter into TBA agreements and settle these transactions on the stipulated settlement date by accepting actual receipt or delivery of the pools of mortgage pass-through securities stipulated in the TBA agreement.

Default by or bankruptcy of a counterparty to a TBA transaction would expose a Fund to possible loss because of adverse market action, expenses or delays in connection with the purchase or sale of the pools of mortgage pass-through securities specified in the TBA transaction. To minimize this risk, the Funds will enter into TBA transactions only with established counterparties (such as major broker-dealers) and the Adviser will monitor the creditworthiness of such counterparties. A Fund’s use of “TBA rolls” may cause the Fund to experience higher portfolio turnover, higher transaction costs and to pay higher capital gain distributions to shareholders (which may be taxable) than other funds.

Collateralized Mortgage Obligations. The Funds may invest in collateralized mortgage obligations (“CMOs”), which are mortgage-backed securities (“MBS”) that are collateralized by mortgage loans or mortgage pass-through securities, and multi-class pass-through securities, which are equity interests in a trust composed of mortgage loans or other MBS. Unless the context indicates otherwise, the discussion of CMOs below also applies to multi-class pass through securities.

CMOs may be issued by governmental or government-related entities or by private entities, such as banks, savings and loan institutions, private mortgage insurance companies, mortgage bankers and other secondary market traders. CMOs are issued in multiple classes, often referred to as “tranches,” with each tranche having a specific fixed or floating coupon rate and stated maturity or final distribution date. Under the traditional CMO structure, the cash flows generated by the mortgages or mortgage pass-through securities in the collateral pool are used to first pay interest and then pay principal to the holders of the CMOs. Subject to the various provisions of individual CMO issues, the cash flow generated by the underlying collateral (to the extent that the collateral exceeds the amount required to pay the stated interest) is used to retire the bonds.

The principal and interest on the underlying collateral may be allocated among the several tranches of a CMO in innumerable ways including “interest only” and “inverse interest only” tranches. In a common CMO structure, the tranches are retired sequentially in the order of their respective stated maturities or final distribution dates (as opposed to the pro-rata return of principal found in traditional pass-through obligations). The fastest-pay tranches would initially receive all principal payments. When those tranches are retired, the next tranches in the sequence receive all of the principal payments until they are retired. The sequential retirement of bond groups continues until the last tranche is retired. Accordingly, the CMO structure allows the issuer to use cash flows of long maturity, monthly-pay collateral to formulate securities with short, intermediate, and long final maturities and expected average lives and risk characteristics.

The primary risk of CMOs is the uncertainty of the timing of cash flows that results from the rate of prepayments on the underlying mortgages serving as collateral and from the structure of the particular CMO transaction (that is, the priority of the individual tranches). An increase or decrease in prepayment rates (resulting from a decrease or increase in mortgage interest rates) may cause the CMOs to be retired substantially earlier than their stated maturities or final distribution dates and will affect the yield and price of CMOs. In addition, if the collateral securing CMOs or any third-party guarantees are insufficient to make payments, a Fund could sustain a loss. The prices of certain CMOs, depending on their structure and the rate of prepayments, can be volatile. Some CMOs may also not be as liquid as other types of mortgage securities. As a result, it may be difficult or impossible to sell the securities at an advantageous time or price.

Privately-issued CMOs are arrangements in which the underlying mortgages are held by the issuer, which then issues debt collateralized by the underlying mortgage assets. These securities may be backed by mortgage insurance, letters of credit, or other credit enhancing features. Although payment of the principal of, and interest on, the underlying collateral securing privately issued CMOs may be guaranteed by the U.S. Government or its agencies and instrumentalities, these CMOs represent obligations solely of the private issuer and are not insured or guaranteed by the U.S. Government, its agencies and instrumentalities or any other person or entity. Privately-issued CMOs are subject to prepayment risk due to the possibility that prepayments on the underlying assets will alter the cash flow. Yields on privately-issued CMOs have been historically higher than the yields on CMOs backed by mortgages guaranteed by U.S. government agencies and instrumentalities. The risk of loss due to default on privately issued CMOs, however, is historically higher since the U.S. Government has not guaranteed them.

New types of CMO tranches have evolved. These include floating rate CMOs, planned amortization classes, accrual bonds, and CMO residuals. These newer structures affect the amount and timing of principal and interest received by each tranche from the underlying collateral. For example, an inverse interest-only class CMO entitles holders to receive no payments of principal and to receive interest at a rate that will vary inversely with a specified index or a multiple thereof. Under certain of these newer structures, given classes of CMOs have priority over others with respect to the receipt of prepayments on the mortgages. Therefore, depending on the type of CMOs in which a Fund invests, the investment may be subject to a greater or lesser risk of prepayment than other types of MBS.

Stripped Mortgage-Backed Securities. The Funds may invest in stripped mortgage-backed securities (“SMBS”). SMBS are derivative multi-class mortgage securities. SMBS may be issued by agencies or instrumentalities of the U.S. Government, or by private originators of, or investors in, mortgage loans, including savings and loan associations, mortgage banks, commercial banks, investment banks, and special purpose entities of the foregoing. SMBS are usually structured with two classes that receive different proportions of the interest and principal distributions on a pool of mortgage assets. A common type of SMBS will have one class receiving some of the interest and most of the principal from the mortgage assets, while the other class will receive most of the interest and the remainder of the principal. In the most-extreme case, one class will receive all of the interest (the “IO” class), while the other class will receive the entire principal (the principal-only or “PO” class). The yield to maturity on an IO class is extremely sensitive to the rate of principal payments (including pre-payments) on the related underlying mortgage assets, and a rapid rate of principal payments may have a material adverse effect on a Fund's yield to maturity from these securities. If the underlying mortgage assets experience greater than anticipated pre-payments of principal, a Fund may fail to recoup some or all of its initial investment in these securities even if the security is in one of the highest rating categories. Conversely, PO classes tend to increase in value if prepayments are greater than anticipated and decline if prepayments are slower than anticipated. The secondary market for SMBS may be more volatile and less liquid than that for other mortgage-backed securities, potentially limiting a Fund's ability to buy or sell those securities at any particular time.

Government National Mortgage Association. Ginnie Mae is the principal governmental guarantor of mortgage-related securities. Ginnie Mae is a wholly-owned corporation of the U.S. government within the Department of Housing and Urban Development. Securities issued by Ginnie Mae are treasury securities, which means the full faith and credit of the U.S. government backs these securities. Ginnie Mae guarantees the timely payment of principal and interest on securities issued by institutions approved by Ginnie Mae and backed by pools of Federal Housing Administration-insured or Veterans Administration-guaranteed mortgages. Ginnie Mae does not guarantee the market value or yield of mortgage-backed securities or the value of a Fund's shares. To buy Ginnie Mae securities, a Fund may have to pay a premium over the maturity value of the underlying mortgages, which the Fund may lose if prepayment occurs.

Federal National Mortgage Association. Fannie Mae is a government-sponsored corporation owned entirely by private stockholders. Fannie Mae is regulated by the Secretary of Housing and Urban Development. Fannie Mae purchases conventional mortgages from a list of approved sellers and service providers, including state and federally-chartered savings and loan associations, mutual savings banks, commercial banks, and credit unions and mortgage bankers. Securities issued by Fannie Mae are agency securities, which means Fannie Mae, but not the U.S. government, guarantees their timely payment of principal and interest.

Federal Home Loan Mortgage Corporation. Freddie Mac is stockholder-owned corporation established by the U.S. Congress to create a continuous flow of funds to mortgage lenders. Freddie Mac supplies lenders with the money to make mortgages and packages the mortgages into marketable securities. The system is designed to create a stable mortgage credit system and reduce the rates paid by homebuyers. Freddie Mac, not the U.S. government, guarantees timely payment of principal and interest.

Commercial Banks, Savings and Loan Institutions, Private Mortgage Insurance Companies, Mortgage Bankers and other Secondary Market Issuers. Commercial banks, savings and loan institutions, private mortgage insurance companies, mortgage bankers, and other secondary-market issuers also create pass-through pools of conventional mortgage loans. In addition to guaranteeing the mortgage-related security, such issuers may service and/or have originated the underlying mortgage loans. Pools created by these issuers generally offer a higher rate of interest than pools created by Ginnie Mae, Fannie Mae and Freddie Mac because these pools are not guaranteed by a government agency.

Senior Loans and Bank Loans. Senior loans and bank loans typically are arranged through private negotiations between a borrower and several financial institutions or a group of lenders which are represented by one or more lenders acting as agent. The agent is often a commercial bank that originates the loan and invites other parties to join the lending syndicate. The agent will be primarily responsible for negotiating the loan agreement and will have responsibility for the documentation and ongoing administration of the loan on behalf of the lenders after completion of the loan transaction. A Fund can invest in a senior loan or bank loan either as a direct lender or through an assignment or participation.

When a Fund acts as a direct lender, it will have a direct contractual relationship with the borrower and may participate in structuring the loan, may enforce compliance by the borrower with the terms of the loan agreement and may have voting, consent, and set-off rights under the loan agreement.

Loan assignments are investments in all or a portion of certain senior loans or bank loans purchased from the lenders or from other third parties. The purchaser of an assignment typically will acquire direct rights against the borrower under the loan. While the purchaser of an assignment typically succeeds to all the rights and obligations of the assigning lender under the loan agreement, because assignments are arranged through private negotiations between potential assignees and assignors, or other third parties whose interests are being assigned, the rights and obligations acquired by a Fund may differ from and be more limited than those held by the assigning lender.

A holder of a loan participation typically has only a contractual right with the seller of the participation and not with the borrower or any other entities interpositioned between the seller of the participation and the borrower. As such, the purchaser of a loan participation assumes the credit risk of the seller of the participation, and any intermediary entities between the seller and the borrower, in addition to the credit risk of the borrower. When a Fund holds a loan participation, it will have the right to receive payments of principal, interest and fees to which it may be entitled only from the seller of the participation and only upon receipt of the seller of such payments from the borrower or from any intermediary parties between the seller and the borrower. Additionally, the Fund will generally have no right to enforce compliance by the borrower with the terms of the loan agreement, will have no voting, consent, or set-off rights under the loan agreement and may not directly benefit from the collateral supporting the loan although lenders that sell participations generally are required to distribute liquidation proceeds received by the lenders pro rata among the holders of these participations. In the event of the bankruptcy or insolvency of the borrower, a loan participation may be subject to certain defenses that can be asserted by the borrower as a result of improper conduct by the seller or intermediary. If the borrower fails to pay principal and interest when due, the Fund may be subject to greater delays, expenses, and risks than those that would have been involved if the Fund had purchased a direct obligation of this borrower.

Direct loans, assignments, and loan participations may be considered liquid, as determined by the Adviser based on criteria approved by the Board.

A Fund may have difficulty disposing of bank loans because, in certain cases, the market for these instruments is not highly liquid. The lack of a highly liquid secondary market may have an adverse impact on the value of such instruments and on the Fund's ability to dispose of the bank loan in response to a specific economic event, such as deterioration in the creditworthiness of the borrower. Furthermore, transactions in many loans settle on a delayed basis, and the Fund may not receive the proceeds from the sale of a loan for a substantial period of time after the sale. As a result, those proceeds will not be available to make additional investments or to meet the Fund's redemption obligations. To the extent that extended settlement creates short-term liquidity needs, a Fund may satisfy these needs by holding additional cash or selling other investments (potentially at an inopportune time, which could result in losses to the Fund).

Bank loans may not be considered "securities," and purchasers, such as a Fund, therefore, may not be entitled to rely on the anti-fraud protections of the federal securities laws.

The Adviser may from time to time have the opportunity to receive material, non-public information ("Confidential Information") about the borrower, including financial information and related documentation regarding the borrower that is not publicly available. Pursuant to applicable policies and procedures, the Adviser may (but is not required to) seek to avoid receipt of Confidential Information from the borrower so as to avoid possible restrictions on its ability to purchase and sell investments on behalf of a Fund and other clients to which this Confidential Information relates (e.g., publicly-traded securities issued by the borrower). In such circumstances, the Fund (and other clients of the Adviser) may be disadvantaged in comparison to other investors, including with respect to the price the Fund pays or receives when it buys or sells a bank loan. Further, the Adviser's ability to assess the desirability of proposed consents, waivers or amendments with respect to certain bank loans may be compromised if it is not privy to available Confidential Information. The Adviser also may determine to receive this Confidential Information in certain circumstances under its applicable policies and procedures. If the Adviser intentionally or unintentionally comes into possession of Confidential Information, it may be unable, potentially for a substantial period of time, to purchase or sell publicly-traded securities to which this Confidential Information relates.

Repurchase Agreements. The Funds may enter into repurchase agreements with financial institutions. A repurchase agreement is an agreement under which a Fund acquires a fixed-income security (generally a security issued by the U.S. government or an agency thereof, a banker's acceptance, or a certificate of deposit) from a commercial bank, broker, or dealer, and simultaneously agrees to resell this security to the seller at an agreed upon price and date (normally, the next business day). Because the security purchased constitutes collateral for the repurchase obligation, a repurchase agreement may be considered a loan that is collateralized by the security purchased. The acquisition of a repurchase agreement may be deemed to be an acquisition of the underlying securities as long as the obligation of the seller to repurchase the securities is collateralized fully. The Funds follow certain procedures designed to minimize the risks inherent in such agreements. These procedures include effecting repurchase transactions only with creditworthy financial institutions whose condition will be continually monitored by the Adviser. The repurchase agreements entered into by the Funds will provide that the underlying collateral at all times shall have a value at least equal to 102% of the resale price stated in the agreement and consist only of securities permissible under Section 101(47)(A)(i) of the Bankruptcy Code (the Adviser monitors compliance with this requirement). Under all repurchase agreements entered into by the Funds, the custodian or its agent must take possession of the underlying collateral. In the event of a default or bankruptcy by a selling financial institution, a Fund will seek to liquidate such collateral. However, the exercising of a Fund's right to liquidate such collateral could involve certain costs or delays and, to the extent that proceeds from any sale upon a default of the obligation to repurchase were less than the repurchase price, the Fund could suffer a loss. The Funds may also enter into "tri-party" repurchase agreements. In "tri-party" repurchase agreements, an unaffiliated third party custodian maintains accounts to hold collateral for a Fund and its counterparties and, therefore, the Fund may be subject to the credit risk of those custodians. The investments of the Funds in repurchase agreements, at times, may be substantial when, in the view of the Adviser, liquidity or other considerations so warrant.

Reverse Repurchase Agreements. Reverse repurchase agreements are transactions in which a Fund sells portfolio securities to financial institutions, such as banks and broker-dealers, and agrees to repurchase these securities at a mutually agreed-upon date and price that is higher than the original sale price. Reverse repurchase agreements are similar to a fully collateralized borrowing by a Fund.

Reverse repurchase agreements involve risks. Reverse repurchase agreements are a form of leverage, and the use of reverse repurchase agreements by a Fund may increase the Fund's volatility. Reverse repurchase agreements are also subject to the risk that the other party to the reverse repurchase agreement will be unable or unwilling to complete the transaction as scheduled, which may result in losses to a Fund. Reverse repurchase agreements also involve the risk that the market value of the securities sold by a Fund may decline below the price at which it is obligated to repurchase the securities. In addition, when a Fund invests the proceeds it receives in a reverse repurchase transaction, there is a risk that those investments may decline in value. In this circumstance, the Fund could be required to sell other investments in order to meet its obligations to repurchase the securities.

The Derivatives Rule (as defined below) permits the Funds to enter into reverse repurchase agreements and similar financing transactions, notwithstanding the limitation on the issuance of senior securities in Section 18 of the 1940 Act. The Derivatives Rule permits the Funds to elect whether to treat a reverse repurchase agreement as a borrowing, subject to the asset coverage requirements of Section 18 of the 1940 Act, or as a derivatives transaction under the Derivatives Rule.

Securities of Other Investment Companies. The Funds may invest in shares of other investment companies, to the extent permitted by applicable law, subject to certain restrictions. These investment companies typically incur fees that are separate from those fees incurred directly by a Fund. A Fund's purchase of such investment company securities results in the layering of expenses, such that shareholders would indirectly bear a proportionate share of the operating expenses of such investment companies, including advisory fees, in addition to paying the Fund's expenses.

Generally, the federal securities laws limit the extent to which a Fund can invest in securities of other investment companies, subject to certain exceptions. For example, Section 12(d)(1)(A) of the 1940 Act prohibits a fund from (i) acquiring more than 3% of the voting shares of any one investment company, (ii) investing more than 5% of its total assets in any one investment company, and (iii) investing more than 10% of its total assets in all investment companies combined, including its ETF investments.

The Funds may rely on Section 12(d)(1)(F) of the 1940 Act, which provides an exemption from Section 12(d)(1) that allows a Fund to invest all of its assets in other registered funds, including ETFs, if, among other conditions, the Fund, together with its affiliates, acquires no more than 3% of the outstanding voting stock of any acquired fund. The Funds may also rely on Rule 12d1-4 under the 1940 Act. Rule 12d1-4 permits a Fund to invest in other investment companies beyond the statutory limits, subject to certain conditions specified in the Rule including, among other conditions, that the Fund and its advisory group will not control (individually or in the aggregate) an acquired fund (e.g., hold more than 25% of the outstanding voting securities of an acquired fund that is a registered open-end management investment company). In addition, a Fund may be able to rely on certain other rules under the 1940 Act to invest in shares of money market funds or other investment companies beyond the statutory limits noted above, but subject to certain conditions.

For hedging or other purposes, a Fund may invest in investment companies that seek to track the composition and/or performance of specific indexes or portions of specific indexes. Certain of these investment companies, known as ETFs, are traded on a securities exchange. (See “Exchange-Traded Funds” above). The market prices of index-based investments will fluctuate in accordance with changes in the underlying portfolio securities of the investment company and also due to supply and demand of the investment company’s shares on the exchange upon which the shares are traded. Index-based investments may not replicate or otherwise match the composition or performance of their specified index due to transaction costs, among other things.

The Funds may invest in investment companies that are not registered with the SEC or in privately placed securities of investment companies (which may or may not be registered), such as hedge funds and offshore funds. Unregistered funds are largely exempt from the regulatory requirements that apply to registered investment companies. As a result, unregistered funds may have a greater ability to make investments, or use investment techniques, that offer a higher potential investment return (for example, leveraging), but which may carry high risk. Unregistered funds, while not regulated by the SEC like registered funds, may be indirectly supervised by the financial institutions (e.g., commercial and investment banks) that may provide the unregistered funds with loans or other sources of capital. Investments in unregistered funds may be difficult to sell, which could cause a Fund to lose money when selling an interest in an unregistered fund. For example, many hedge funds require their investors to hold their investments for at least one year.

Derivatives. Derivatives are financial instruments whose value is based on an underlying asset (such as a stock or a bond), an underlying economic factor (such as an interest rate) or a market benchmark. Unless otherwise stated in the Prospectus, the Funds may use derivatives for a number of purposes including managing risk, gaining exposure to various markets in a cost-efficient manner, reducing transaction costs, remaining fully invested and speculating. The Funds may also invest in derivatives with the goal of protecting itself from broad fluctuations in market prices, interest rates or foreign currency exchange rates (a practice known as “hedging”). When hedging is successful, a Fund will have offset any depreciation in the value of its portfolio securities by the appreciation in the value of the derivative position. Although techniques other than the sale and purchase of derivatives could be used to control the exposure of the Funds to market fluctuations, the use of derivatives may be a more effective means of hedging this exposure. In the future, to the extent this use is consistent with the Funds’ investment objectives and is legally permissible, the Funds may use instruments and techniques that are not presently contemplated, but that may be subsequently developed.

There can be no assurance that a derivative strategy, if employed, will be successful. Because many derivatives have a leverage or borrowing component, adverse changes in the value or level of the underlying asset, reference rate or index can result in a loss substantially greater than the amount invested in the derivative itself.

Rule 18f-4 under the 1940 Act. Rule 18f-4 under the 1940 Act (the “Derivatives Rule”) provides a comprehensive framework for the use of derivatives by registered investment companies. The Derivatives Rule permits a registered investment company, subject to various conditions described below, to enter into derivatives transactions and certain other transactions notwithstanding the restrictions on the issuance of “senior securities” under Section 18 of the 1940 Act. Section 18 of the 1940 Act, among other things, prohibits open-end funds, including the Funds, from issuing or selling any “senior security,” other than borrowing from a bank (subject to a requirement to maintain 300% “asset coverage”).

Registered investment companies that don’t qualify as “limited derivatives users” as defined below, are required by the Derivatives Rule to, among other things, (i) adopt and implement a derivatives risk management program (“DRMP”) and new testing requirements; (ii) comply with a relative or absolute limit on fund leverage risk calculated based on value-at-risk (“VaR”); and (iii) comply with new requirements related to Board and U.S. Securities and Exchange Commission (the “SEC”) reporting. The DRMP is administered by a “derivatives risk manager,” who is appointed by the Board and periodically reviews the DRMP and reports to the Board.

The Derivatives Rule provides an exception from the DRMP, VaR limit and certain other requirements for a registered investment company that limits its “derivatives exposure” to no more than 10% of its net assets (as calculated in accordance with the Derivatives Rule) (a “limited derivatives user”), provided that the registered investment company establishes appropriate policies and procedures reasonably designed to manage derivatives risks, including the risk of exceeding the 10% “derivatives exposure” threshold.

The requirements of the Derivatives Rule may limit a Fund’s ability to engage in derivatives transactions as part of its investment strategies. These requirements may also increase the cost of a Fund’s investments and cost of doing business, which could adversely affect the value of the Fund’s investments and/or the performance of the Fund. The rule also may not be effective to limit a Fund’s risk of loss. In particular, measurements of VaR rely on historical data and may not accurately measure the degree of risk reflected in a Fund’s derivatives or other investments. There may be additional regulation of the use of derivatives transactions by registered investment companies, which could significantly affect their use. The ultimate impact of the regulations remains unclear. Additional regulation of derivatives transactions may make them more costly, limit their availability or utility, otherwise adversely affect their performance or disrupt markets.

CFTC Regulations. Pursuant to rules adopted under the Commodity Exchange Act (“CEA”) by the Commodity Futures Trading Commission (“CFTC”), a Fund must either operate within certain guidelines and restrictions with respect to the Fund’s use of futures, options on such futures, commodity options and certain swaps, or the Adviser will be subject to registration with the CFTC as a “commodity pool operator” (“CPO”).

Consistent with the CFTC’s regulations, the Adviser, on behalf of the Funds, has filed a notice of exclusion from the definition of the term CPO under the CEA pursuant to CFTC Rule 4.5 with respect to the Funds’ operations. Therefore, the Funds are not subject to regulation as commodity pools under the CEA and the Adviser is not subject to registration or regulation as a CPO under the CEA with respect to the Funds. As a result, the Funds will be limited in their ability to use futures, options on such futures, commodity options and certain swaps. Complying with the limitations may restrict the Adviser’s ability to implement the Funds’ investment strategies and may adversely affect the Funds’ performance.

Types of Derivatives:

Futures. A futures contract is an agreement between two parties whereby one party agrees to sell and the other party agrees to buy a specified amount of a financial instrument at an agreed upon price and time. The financial instrument underlying the contract may be a stock, stock index, bond, bond index, interest rate, foreign exchange rate or other similar instrument. Agreeing to buy the underlying financial instrument is called buying a futures contract or taking a long position in the contract. Likewise, agreeing to sell the underlying financial instrument is called selling a futures contract or taking a short position in the contract.

Futures contracts are traded in the United States on commodity exchanges or boards of trade (known as “contract markets”) approved for such trading and regulated by the CFTC. These contract markets standardize the terms, including the maturity date and underlying financial instrument, of all futures contracts.

Unlike other securities, the parties to a futures contract do not have to pay for or deliver the underlying financial instrument until some future date (the delivery date). Contract markets require both the purchaser and seller to deposit “initial margin” with a futures broker, known as a futures commission merchant or custodian bank, when they enter into the contract. Initial margin deposits are typically equal to a percentage of the contract’s value. Initial margin is similar to a performance bond or good faith deposit on a contract and is returned to the depositing party upon termination of the futures contract if all contractual obligations have been satisfied. After parties to the transaction open a futures contract, the parties must compare the purchase price of the contract to the contract’s daily market value. If the value of the futures contract changes in such a way that a party’s position declines, that party must make additional “variation margin” payments so that the margin payment is adequate. On the other hand, the value of the contract may change in such a way that there is excess margin on deposit, possibly entitling the party that has a gain to receive all or a portion of this amount. This process is known as “marking to the market.” Variation margin does not represent a borrowing or loan by a party, but instead is a settlement between the party and the futures broker of the amount one party would owe the other if the futures contract terminated. In computing daily NAV, each party marks to market its open futures positions.

Although the terms of a futures contract call for the actual delivery of and payment for the underlying security, in many cases the parties may close the contract early by taking an opposite position in an identical contract. If the sale price upon closing out the contract is less than the original purchase price, the party closing out the contract will realize a loss. If the sale price upon closing out the contract is more than the original purchase price, the party closing out the contract will realize a gain. Conversely, if the purchase price upon closing out the contract is more than the original sale price, the party closing out the contract will realize a loss. If the purchase price upon closing out the contract is less than the original sale price, the party closing out the contract will realize a gain.

A Fund may incur commission expenses when it opens or closes a futures position.

Options. An option is a contract between two parties for the purchase and sale of a financial instrument for a specified price (known as the “strike price” or “exercise price”) at any time during the option period. Unlike a futures contract, an option grants a right (not an obligation) to buy or sell a financial instrument. Generally, a seller of an option can grant a buyer two kinds of rights: a “call” (the right to buy the security) or a “put” (the right to sell the security). Options have various types of underlying instruments, including specific securities, indices of securities prices, foreign currencies, interest rates and futures contracts. Options may be traded on an exchange (exchange-traded options) or may be customized agreements between the parties (over-the-counter or “OTC” options). As with futures, a financial intermediary, known as a clearing corporation, financially backs exchange-traded options. However, OTC options have no such intermediary and are subject to the risk that the counterparty will not fulfill its obligations under the contract. The principal factors affecting the market value of an option include supply and demand, interest rates, the current market value of the underlying instrument relative to the exercise price of the option, the volatility of the underlying instrument, and the time remaining until the option expires.

▪ **Purchasing Put and Call Options**

When a Fund purchases a put option, it buys the right to sell the instrument underlying the option at a fixed strike price. In return for this right, the Fund pays the current market price for the option (known as the “option premium”). A Fund may purchase put options to offset or hedge against a decline in the market value of its securities (“protective puts”) or to benefit from a decline in the price of securities that it does not own. A Fund would ordinarily realize a gain if, during the option period, the value of the underlying securities decreased below the exercise price sufficiently to cover the premium and transaction costs. However, if the price of the underlying instrument does not fall enough to offset the cost of purchasing the option, a put buyer would lose the premium and related transaction costs.

Call options are similar to put options, except that a Fund obtains the right to purchase, rather than sell, the underlying instrument at the option’s strike price. A Fund would normally purchase call options in anticipation of an increase in the market value of securities it owns or wants to buy. A Fund would ordinarily realize a gain if, during the option period, the value of the underlying instrument exceeded the exercise price plus the premium paid and related transaction costs. Otherwise, the Fund would realize either no gain or a loss on the purchase of the call option.

The purchaser of an option may terminate its position by:

- Allowing it to expire and losing its entire premium;
- Exercising the option and either selling (in the case of a put option) or buying (in the case of a call option) the underlying instrument at the strike price; or
- Closing it out in the secondary market at its current price.

▪ **Selling (Writing) Put and Call Options**

When a Fund writes a call option it assumes an obligation to sell specified securities to the holder of the option at a fixed strike price if the option is exercised at any time before the expiration date. Similarly, when a Fund writes a put option it assumes an obligation to purchase specified securities from the option holder at a fixed strike price if the option is exercised at any time before the expiration date. The Fund may terminate its position in an exchange-traded put option before exercise by buying an option identical to the one it has written. Similarly, the Fund may cancel an OTC option by entering into an offsetting transaction with the counterparty to the option.

A Fund could try to hedge against an increase in the value of securities it would like to acquire by writing a put option on those securities. If security prices rise, the Fund would expect the put option to expire and the premium it received to offset the increase in the security’s value. If security prices remain the same over time, the Fund would hope to profit by closing out the put option at a lower price. If security prices fall, the Fund may lose an amount of money equal to the difference between the value of the security and the premium it received. Writing covered put options may deprive a Fund of the opportunity to profit from a decrease in the market price of the securities it would like to acquire.

The characteristics of writing call options are similar to those of writing put options, except that call writers expect to profit if prices remain the same or fall. A Fund could try to hedge against a decline in the value of securities it already owns by writing a call option. If the price of that security falls as expected, the Fund would expect the option to expire and the premium it received to offset the decline of the security's value. However, the Fund must be prepared to deliver the underlying instrument in return for the strike price, which may deprive it of the opportunity to profit from an increase in the market price of the securities it holds.

The Funds are permitted to write only "covered" options. At the time of selling a call option, a Fund may cover the option by owning, among other things:

- The underlying security (or securities convertible into the underlying security without additional consideration), index, interest rate, foreign currency or futures contract;
- A call option on the same security or index with the same or lesser exercise price;
- Cash or liquid securities equal to at least the market value of the optioned securities, interest rate, foreign currency, or futures contract; or
- In the case of an index, the portfolio of securities that corresponds to the index.

At the time of selling a put option, a Fund may cover the option by, among other things:

- Entering into a short position in the underlying security;
- Purchasing a put option on the same security, index, interest rate, foreign currency, or futures contract with the same or greater exercise price; or
- Maintaining the entire exercise price in liquid securities.

- **Options on Securities Indices**

Options on securities indices are similar to options on securities, except that the exercise of securities index options requires cash settlement payments and does not involve the actual purchase or sale of securities. In addition, securities index options are designed to reflect price fluctuations in a group of securities or segment of the securities market rather than price fluctuations in a single security.

- **Options on Credit Default Swaps**

An option on a credit default swap ("CDS") gives the holder the right to enter into a CDS at a specified future date and under specified terms in exchange for a purchase price or premium. The writer of the option bears the risk of any unfavorable move in the value of the CDS relative to the market value on the exercise date, while the purchaser may allow the option to expire unexercised.

- **Options on Futures**

An option on a futures contract provides the holder with the right to buy a futures contract (in the case of a call option) or sell a futures contract (in the case of a put option) at a fixed time and price. Upon exercise of the option by the holder, the contract market clearing house establishes a corresponding short position for the writer of the option (in the case of a call option) or a corresponding long position (in the case of a put option). If the option is exercised, the parties will be subject to the futures contracts. In addition, the writer of an option on a futures contract is subject to initial and variation margin requirements on the option position. Options on futures contracts are traded on the same contract market as the underlying futures contract.

The buyer or seller of an option on a futures contract may terminate the option early by purchasing or selling an option of the same series (*i.e.*, the same exercise price and expiration date) as the option previously purchased or sold. The difference between the premiums paid and received represents the trader's profit or loss on the transaction.

A Fund may purchase put and call options on futures contracts instead of selling or buying futures contracts. The Fund may buy a put option on a futures contract for the same reasons it would sell a futures contract. It also may purchase such a put option in order to hedge a long position in the underlying futures contract. A Fund may buy a call option on a futures contract for the same purpose as the actual purchase of a futures contract, such as in anticipation of favorable market conditions.

A Fund may write a call option on a futures contract to hedge against a decline in the prices of the instrument underlying the futures contracts. If the price of the futures contract at expiration were below the exercise price, the Fund would retain the option premium, which would offset, in part, any decline in the value of its portfolio securities.

The writing of a put option on a futures contract is similar to the purchase of the futures contracts, except that, if the market price declines, a Fund would pay more than the market price for the underlying instrument. The premium received on the sale of the put option, less any transaction costs, would reduce the net cost to the Fund.

- **Options on Foreign Currencies**

A put option on a foreign currency gives the purchaser of the option the right to sell a foreign currency at the exercise price until the option expires. A call option on a foreign currency gives the purchaser of the option the right to purchase the currency at the exercise price until the option expires. The Funds may purchase or write put and call options on foreign currencies for the purpose of hedging against changes in future currency exchange rates.

The Funds may use foreign currency options given the same circumstances under which it could use forward foreign currency exchange contracts. For example, a decline in the U.S. dollar value of a foreign currency in which a Fund's securities are denominated would reduce the U.S. dollar value of the securities, even if their value in the foreign currency remained constant. In order to hedge against such a risk, the Fund may purchase a put option on the foreign currency. If the value of the currency then declined, the Fund could sell the currency for a fixed amount in U.S. dollars and thereby offset, at least partially, the negative effect on its securities that otherwise would have resulted. Conversely, if a Fund anticipates a rise in the U.S. dollar value of a currency in which securities to be acquired are denominated, the Fund may purchase call options on the currency in order to offset, at least partially, the effects of negative movements in exchange rates. If currency exchange rates do not move in the direction or to the extent anticipated, the Funds could sustain losses on transactions in foreign currency options.

- **Combined Positions**

The Funds may purchase and write options in combination with each other, or in combination with futures or forward contracts or swap agreements, to adjust the risk and return characteristics of the overall position. For example, a Fund could construct a combined position whose risk and return characteristics are similar to selling a futures contract by purchasing a put option and writing a call option on the same underlying instrument. Alternatively, a Fund could write a call option at one strike price and buy a call option at a lower price to reduce the risk of the written call option in the event of a substantial price increase. Because combined options positions involve multiple trades, they result in higher transaction costs and may be more difficult to open and close out.

Forward Foreign Currency Exchange Contracts. A forward foreign currency contract involves an obligation to purchase or sell a specific amount of currency at a future date or date range at a specific price. In the case of a cancelable forward contract, the holder has the unilateral right to cancel the contract at maturity by paying a specified fee. Forward foreign currency exchange contracts differ from foreign currency futures contracts in certain respects. Unlike futures contracts, forward contracts:

- Do not have standard maturity dates or amounts (i.e., the parties to the contract may fix the maturity date and the amount);
- Are typically traded directly between currency traders (usually large commercial banks) and their customers in the inter-bank markets, as opposed to on exchanges regulated by the CFTC (note, however, that under definitions adopted by the CFTC and SEC, many non-deliverable foreign currency forwards will be considered swaps for certain purposes, including determination of whether such instruments must be traded on exchanges and centrally cleared);
- Do not require an initial margin deposit; and
- May be closed by entering into a closing transaction with the currency trader who is a party to the original forward contract, as opposed to with a commodities exchange.

▪ **Foreign Currency Hedging Strategies**

A “settlement hedge” or “transaction hedge” is designed to protect a Fund against an adverse change in foreign currency values between the date a security is purchased or sold and the date on which payment is made or received. Entering into a forward contract for the purchase or sale of the amount of foreign currency involved in an underlying security transaction for a fixed amount of U.S. dollars “locks in” the U.S. dollar price of the security. A Fund may also use forward contracts to purchase or sell a foreign currency when it anticipates purchasing or selling securities denominated in foreign currency, even if it has not yet selected the specific investments.

A Fund may use forward contracts to hedge against a decline in the value of existing investments denominated in foreign currency. Such a hedge, sometimes referred to as a “position hedge,” would tend to offset both positive and negative currency fluctuations, but would not offset changes in security values caused by other factors. The Fund could also hedge the position by selling another currency expected to perform similarly to the currency in which the Fund’s investment is denominated. This type of hedge, sometimes referred to as a “proxy hedge,” could offer advantages in terms of cost, yield, or efficiency, but generally would not hedge currency exposure as effectively as a direct hedge into U.S. dollars. Proxy hedges may result in losses if the currency used to hedge does not perform similarly to the currency in which the hedged securities are denominated.

Transaction and position hedging do not eliminate fluctuations in the underlying prices of the securities that a Fund owns or intends to purchase or sell. They simply establish a rate of exchange that one can achieve at some future point in time. Additionally, these techniques tend to minimize the risk of loss due to a decline in the value of the hedged currency and to limit any potential gain that might result from the increase in value of such currency.

A Fund may enter into forward contracts to shift its investment exposure from one currency into another. These transactions may call for the delivery of one foreign currency in exchange for another foreign currency, including currencies in which its securities are not then denominated. This may include shifting exposure from U.S. dollars to a foreign currency, or from one foreign currency to another foreign currency. This type of strategy, sometimes known as a “cross-hedge,” will tend to reduce or eliminate exposure to the currency that is sold, and increase exposure to the currency that is purchased. Cross-hedges may protect against losses resulting from a decline in the hedged currency but will cause the Fund to assume the risk of fluctuations in the value of the currency it purchases. Cross-hedging transactions also involve the risk of imperfect correlation between changes in the values of the currencies involved.

It is difficult to forecast with precision the market value of portfolio securities at the expiration or maturity of a forward or futures contract. Accordingly, a Fund may have to purchase additional foreign currency on the spot (cash) market if the market value of a security it is hedging is less than the amount of foreign currency it is obligated to deliver. Conversely, the Fund may have to sell on the spot market some of the foreign currency it received upon the sale of a security if the market value of such security exceeds the amount of foreign currency it is obligated to deliver.

Participation Notes (“P-Notes”). P-Notes are participation interest notes that are issued by banks or broker-dealers and are designed to offer a return linked to a particular underlying equity, debt, currency, or market. When purchasing a P-Note, the posting of margin is not required because the full cost of the P-Note (plus commission) is paid at the time of purchase. When the P-Note matures, the issuer will pay to, or receive from, the purchaser the difference between the nominal value of the underlying instrument at the time of purchase and that instrument’s value at maturity. Investments in P-Notes involve the same risks associated with a direct investment in the underlying foreign companies or foreign securities markets that these seek to replicate.

In addition, there can be no assurance that the trading price of P-Notes will equal the underlying value of the foreign companies or foreign securities markets that they seek to replicate. The holder of a P-Note that is linked to a particular underlying security is entitled to receive any dividends paid in connection with an underlying security or instrument. However, the holder of a P-Note does not receive voting rights as it would if it directly owned the underlying security or instrument. P-Notes are generally traded over-the-counter. P-Notes constitute general unsecured contractual obligations of the banks or broker-dealers that issue them. There is also counterparty risk associated with these investments because a Fund is relying on the creditworthiness of such counterparty and has no rights under a P-Note against the issuer of the underlying security. In addition, a Fund will incur transaction costs as a result of investment in P-Notes.

Swap Agreements. A swap agreement is a financial instrument that typically involves the exchange of cash flows between two parties on specified dates (settlement dates), where the cash flows are based on agreed-upon prices, rates, indices, etc. The nominal amount on which the cash flows are calculated is called the notional amount. Swap agreements are individually negotiated and structured to include exposure to a variety of different types of investments or market factors, such as interest rates, foreign currency rates, mortgage securities, corporate borrowing rates, security prices, or inflation rates.

Swap agreements may increase or decrease the overall volatility of the investments of a Fund and its share price. The performance of swap agreements may be affected by a change in the specific interest rate, currency, or other factors that determine the amounts of payments due to and from the Fund. If a swap agreement calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if the counterparty’s creditworthiness declined, the value of a swap agreement would be likely to decline, potentially resulting in losses.

Generally, swap agreements have a fixed maturity date that will be agreed upon by the parties. The agreement can be terminated before the maturity date under certain circumstances, such as default by one of the parties or insolvency, among others, and can be transferred by a party only with the prior written consent of the other party. A Fund may be able to eliminate its exposure under a swap agreement either by assignment or by other disposition, or by entering into an offsetting swap agreement with the same party or a similarly creditworthy party. If the counterparty is unable to meet its obligations under the contract, declares bankruptcy, defaults or becomes insolvent, a Fund may not be able to recover the money it expected to receive under the swap agreement. The Funds will not enter into any swap agreement unless the Adviser believes that the counterparty to the transaction is creditworthy.

A swap agreement can be a form of leverage, which can magnify the Funds' gains or losses.

- **Equity Swaps**

In a typical equity swap, one party agrees to pay another party the return on a stock, stock index, or basket of stocks in return for a specified interest rate. By entering into an equity index swap, for example, the index receiver can gain exposure to stocks making up the index of securities without actually purchasing those stocks. Equity index swaps involve not only the risk associated with investment in the securities represented in the index, but also the risk that the performance of such securities, including dividends, will not exceed the return on the interest rate that a Fund will be committed to pay.

- **Total Return Swaps**

Total return swaps are contracts in which one party agrees to make payments of the total return from a reference instrument—which may be a single asset, a pool of assets or an index of assets—during a specified period, in return for payments equal to a fixed or floating rate of interest or the total return from another underlying reference instrument. The total return includes appreciation or depreciation on the underlying asset, plus any interest or dividend payments. Payments under the swap are based upon an agreed upon principal amount but, since the principal amount is not exchanged, it represents neither an asset nor a liability to either counterparty, and is referred to as notional. Total return swaps are marked to market daily using different sources, including quotations from counterparties, pricing services, brokers or market makers. The unrealized appreciation or depreciation related to the change in the valuation of the notional amount of the swap is combined with the amount due to a Fund at termination or settlement. The primary risks associated with total return swaps are credit risks (if the counterparty fails to meet its obligations) and market risk (if there is no liquid market for the swap or unfavorable changes occur to the underlying reference instrument).

- **Interest Rate Swaps**

Interest rate swaps are financial instruments that involve the exchange of one type of interest rate for another type of interest rate cash flow on specified dates in the future. Some of the different types of interest rate swaps are “fixed-for-floating rate swaps,” “termed basis swaps,” and “index amortizing swaps.” Fixed-for floating rate swaps involve the exchange of fixed interest rate cash flows for floating rate cash flows. Termed basis swaps entail cash flows to both parties based on floating interest rates, where the interest rate indices are different. Index amortizing swaps are typically fixed-for-floating rate swaps where the notional amount changes if certain conditions are met.

As with a traditional investment in a debt security, a Fund could lose money by investing in an interest rate swap if interest rates change adversely. For example, if a Fund enters into a swap where it agrees to exchange a floating rate of interest for a fixed rate of interest, the Fund may have to pay more money than it receives. Similarly, if a Fund enters into a swap where it agrees to exchange a fixed rate of interest for a floating rate of interest, the Fund may receive less money than it has agreed to pay.

- **Currency Swaps**

A currency swap is an agreement between two parties in which one party agrees to make interest rate payments in one currency and the other promises to make interest rate payments in another currency. A Fund may enter into a currency swap when it has one currency and desires a different currency. Typically, the interest rates that determine the currency swap payments are fixed, although occasionally one or both parties may pay a floating rate of interest. Unlike an interest rate swap, however, the principal amounts are exchanged at the beginning of the agreement and returned at the end of the agreement. Changes in foreign exchange rates and changes in interest rates, as described above, may negatively affect currency swaps.

- **Inflation Swaps**

Inflation swaps are fixed-maturity, over-the-counter derivatives where one party pays a fixed rate in exchange for payments tied to an inflation index, such as the Consumer Price Index. The fixed rate, which is set by the parties at the initiation of the swap, is often referred to as the “breakeven inflation” rate and generally represents the current difference between treasury yields and Treasury Inflation Protected Securities yields of similar maturities at the initiation of the swap agreement. Inflation swaps are typically designated as “zero coupon,” where all cash flows are exchanged at maturity. The value of an inflation swap is expected to fluctuate in response to changes in the relationship between nominal interest rates and the rate of inflation. An inflation swap can lose value if the realized rate of inflation over the life of the swap is less than the fixed market implied inflation rate (the breakeven inflation rate) the investor agreed to pay at the initiation of the swap.

- **Credit Default Swaps**

A credit default swap is an agreement between a “buyer” and a “seller” for credit protection. The credit default swap agreement may have as reference obligations one or more securities that are not then held by a Fund. The protection buyer is generally obligated to pay the protection seller an upfront payment and/or a periodic stream of payments over the term of the agreement until a credit event on a reference obligation has occurred. If no default occurs, the seller would keep the stream of payments and would have no payment obligations. If a credit event occurs, the seller generally must pay the buyer the full notional amount (the “par value”) of the swap.

- **Caps, Collars and Floors**

Caps and floors have an effect similar to buying or writing options. In a typical cap or floor agreement, one party agrees to make payments only under specified circumstances, usually in return for payment of a fee by the other party. For example, the buyer of an interest rate cap obtains the right to receive payments to the extent that a specified interest rate exceeds an agreed-upon level. The seller of an interest rate floor is obligated to make payments to the extent that a specified interest rate falls below an agreed-upon level. An interest rate collar combines elements of buying a cap and selling a floor.

- **Swaptions**

Swaptions are privately-negotiated option-based derivative products that give the holder the right to enter into a swap. A Fund may use a swaption in addition to or in lieu of a swap involving a similar rate or index.

Risks of Derivatives:

While transactions in derivatives may reduce certain risks, these transactions themselves entail certain other risks. For example, unanticipated changes in interest rates, securities prices or currency exchange rates may result in a poorer overall performance of a Fund than if it had not entered into any derivatives transactions. Derivatives may magnify a Fund's gains or losses, causing it to make or lose substantially more than it invested.

When used for hedging purposes, increases in the value of the securities a Fund holds or intends to acquire should offset any losses incurred with a derivative. Purchasing derivatives for purposes other than hedging could expose the Fund to greater risks.

Use of derivatives involves transaction costs, which may be significant, and may also increase the amount of taxable income to shareholders.

Correlation of Prices. The Funds' ability to hedge their securities through derivatives depends on the degree to which price movements in the underlying index or instrument correlate with price movements in the relevant securities. In the case of poor correlation, the price of the securities a Fund is hedging may not move in the same amount, or even in the same direction as the hedging instrument. The Adviser will try to minimize this risk by investing in only those contracts whose behavior it expects to correlate with the behavior of the portfolio securities it is trying to hedge. However, if the Adviser's prediction of interest and currency rates, market value, volatility or other economic factors is incorrect, a Fund may lose money, or may not make as much money as it expected.

Derivative prices can diverge from the prices of their underlying instruments, even if the characteristics of the underlying instruments are very similar to the derivative. Listed below are some of the factors that may cause such a divergence:

- Current and anticipated short-term interest rates, changes in volatility of the underlying instrument, and the time remaining until expiration of the contract;
- A difference between the derivatives and securities markets, including different levels of demand, how the instruments are traded, the imposition of daily price fluctuation limits, or discontinued trading of an instrument; and
- Differences between the derivatives, such as different margin requirements, different liquidity of these markets, and the participation of speculators in such markets.

Derivatives based upon a narrower index of securities, such as those of a particular industry group, may present greater risk than derivatives based on a broad market index. Since narrower indices are made up of a smaller number of securities, these indices are more susceptible to rapid and extreme price fluctuations because of changes in the value of those securities.

While currency futures and options values are expected to correlate with exchange rates, these values may not reflect other factors that affect the value of the investments of the Funds. A currency hedge, for example, should protect a yen-denominated security from a decline in the yen, but will not protect the Funds against a price decline resulting from deterioration in the issuer's creditworthiness. Because the value of the Funds' foreign-denominated investments changes in response to many factors other than exchange rates, it may not be possible to match the amount of currency options and futures to the value of the Funds' investments precisely over time.

Lack of Liquidity. Before a futures contract or option is exercised or expires, a Fund can terminate it only by entering into a closing purchase or sale transaction. Moreover, a Fund may close out a futures contract only on the exchange the contract was initially traded. Although the Funds intend to purchase options and futures only where there appears to be an active market, there is no guarantee that such a liquid market will exist. If there is no secondary market for the contract, or the market is illiquid, a Fund may not be able to close out its position. In an illiquid market, a Fund may:

- Have to sell securities to meet its daily margin requirements at a time when it is disadvantageous to do so;
- Have to purchase or sell the instrument underlying the contract;
- Not be able to hedge its investments; and/or
- Not be able to realize profits or limit its losses.

Derivatives may become illiquid (*i.e.*, difficult to sell at a desired time and price) under a variety of market conditions. For example:

- An exchange may suspend or limit trading in a particular derivative instrument, an entire category of derivatives or all derivatives, which sometimes occurs because of increased market volatility;
- Unusual or unforeseen circumstances may interrupt normal operations of an exchange;
- The facilities of the exchange may not be adequate to handle current trading volume;
- Equipment failures, government intervention, insolvency of a brokerage firm or clearing house, or other occurrences may disrupt normal trading activity; or
- Investors may lose interest in a particular derivative or category of derivatives.

Management Risk. Successful use of derivatives by the Funds is subject to the ability of the Adviser to forecast stock market and interest rate trends. If the Adviser incorrectly predicts stock market and interest rate trends, the Funds may lose money by investing in derivatives. For example, if a Fund were to write a call option based on the Adviser's expectation that the price of the underlying security would fall, but the price were to rise instead, the Fund could be required to sell the security upon exercise at a price below the current market price. Similarly, if a Fund were to write a put option based on the Adviser's expectation that the price of the underlying security would rise, but the price were to fall instead, the Fund could be required to purchase the security upon exercise at a price higher than the current market price.

Pricing Risk. At times, market conditions might make it hard to value some investments. For example, if a Fund has valued its securities too high, shareholders may end up paying too much for Fund shares when they buy into the Fund. If a Fund underestimates its price, shareholders may not receive the full market value for their Fund shares when they sell.

Margin. Because of the low margin deposits required upon the opening of a derivative position, such transactions involve an extremely high degree of leverage. Consequently, a relatively-small price movement in a derivative may result in an immediate and substantial loss (as well as gain) to a Fund and it may lose more than it originally invested in the derivative.

If the price of a futures contract changes adversely, a Fund may have to sell securities at a time when it is disadvantageous to do so to meet its minimum daily margin requirement. A Fund may lose its margin deposits if a broker-dealer with whom it has an open futures contract or related option becomes insolvent or declares bankruptcy.

Volatility and Leverage. The Funds' use of derivatives may have a leveraging effect. Leverage generally magnifies the effect of any increase or decrease in value of an underlying asset and results in increased volatility, which means the Funds will have the potential for greater gains, as well as the potential for greater losses, than if the Funds does not use derivative instruments that have a leveraging effect. The prices of derivatives are volatile (*i.e.*, these prices may change rapidly, substantially and unpredictably) and are influenced by a variety of factors, including:

- Actual and anticipated changes in interest rates;
- Fiscal and monetary policies; and
- National and international political events.

Most exchanges limit the amount by which the price of a derivative can change during a single trading day. Daily trading limits establish the maximum amount that the price of a derivative may vary from the settlement price of that derivative at the end of trading on the previous day. Once the price of a derivative reaches that value, the Funds may not trade that derivative at a price beyond that limit. The daily limit governs only price movements during a given day and does not limit potential gains or losses. Derivative prices have occasionally moved to the daily limit for several consecutive trading days, preventing prompt liquidation of the derivative.

Government Regulation. The regulation of derivatives markets in the U.S. is a rapidly-changing area of law and is subject to modification by government and judicial action. For example, the Dodd-Frank Wall Street Reform and Consumer Protection Act, signed into law in 2010, granted significant new authority to the SEC and the CFTC to impose comprehensive regulations on the over-the-counter and cleared derivatives markets. These regulations include, but are not limited to, mandatory clearing of certain derivatives and requirements relating to disclosure, margin and trade reporting. The law and regulations may negatively impact the Funds by increasing transaction and/or regulatory compliance costs, limiting the availability of certain derivatives or otherwise adversely affecting the value or performance of the derivatives the Funds trade.

In addition, the SEC adopted the Derivatives Rule on October 28, 2020. Since its compliance date of August 19, 2022, the Derivatives Rule has replaced prior SEC and staff guidance with an updated, comprehensive framework for registered funds' use of derivatives. See "Derivatives – Rule 18f-4 under the 1940 Act" above for additional information on the requirements imposed on registered funds by the Derivatives Rule. Complying with the Derivatives Rule may increase the cost of the Funds' investments and cost of doing business, which could adversely affect investors. Other potentially adverse regulatory obligations can develop suddenly and without notice.

Illiquid Investments. Illiquid investments are investments that a Fund reasonably expects cannot be sold or disposed of in current market conditions in seven calendar days or less without the sale or disposition significantly changing the market value of the investment. Because of their illiquid nature, illiquid investments must be priced at fair value as determined in good faith by the Adviser, subject to Board oversight. Despite these good-faith efforts to determine fair value prices, a Fund's illiquid investments are subject to the risk that the investment's fair value price may differ from the actual price which the Fund may ultimately realize upon its sale or disposition. Difficulty in selling illiquid investments may result in a loss or may be costly to a Fund. Under the oversight of the Board, the Adviser determines the liquidity of the Funds' investments. A Fund may not acquire an illiquid investment if immediately after the acquisition, the Fund would have invested more than 15% of its net assets in illiquid investments that are assets.

Securities Lending. A Fund may lend portfolio securities to brokers, dealers and other financial organizations that meet capital and other credit requirements or other criteria established by the Board. These loans, if and when made, may not exceed 33-1/3% of the total asset value of the Fund (including the loan collateral). The Funds will not lend portfolio securities to the Adviser or its affiliates unless permissible under the 1940 Act and the rules and promulgations thereunder. Loans of portfolio securities will be fully collateralized by cash, letters of credit, or U.S. government securities, and the collateral will be maintained in an amount equal to at least 100% of the current market value of the loaned securities by marking to market daily. Any gain or loss in the market price of the securities loaned that might occur during the term of the loan would be for the account of a Fund.

A Fund may pay a part of the interest earned from the investment of collateral, or other fee, to an unaffiliated third party for acting as the Fund's securities lending agent, but will bear all of any losses from the investment of collateral.

By lending its securities, a Fund may increase its income by receiving payments from the borrower that reflect the amount of any interest or any dividends payable on the loaned securities as well as by either investing cash collateral received from the borrower in short-term instruments or obtaining a fee from the borrower when U.S. government securities or letters of credit are used as collateral. Investing cash collateral subjects a Fund to market risk. A Fund remains obligated to return all collateral to the borrower under the terms of its securities lending arrangements, even if the value of investments made with the collateral decline. Accordingly, if the value of a security in which the cash collateral has been invested declines, the loss would be borne by a Fund, and the Fund may be required to liquidate other investments in order to return collateral to the borrower at the end of the loan. A Fund will adhere to the following conditions whenever its portfolio securities are loaned: (i) the Fund must receive at least 100% cash collateral or equivalent securities of the type discussed above from the borrower; (ii) the borrower must increase such collateral whenever the market value of the securities rises above the level of such collateral; (iii) the Fund must be able to terminate the loan on demand; (iv) the Fund must receive reasonable interest on the loan, as well as any dividends, interest or other distributions on the loaned securities and any increase in market value; (v) the Fund may pay only reasonable fees in connection with the loan (which fees may include fees payable to the lending agent, the borrower, the Fund's administrator and the custodian); and (vi) voting rights on the loaned securities may pass to the borrower, provided, however, that if a material event adversely affecting the investment occurs, the Fund must terminate the loan and regain the right to vote the securities. In these instances, the Adviser will vote the securities in accordance with its proxy voting policies and procedures. The Board has adopted procedures reasonably designed to ensure that the foregoing criteria will be met. Loan agreements involve certain risks in the event of default or insolvency of the borrower, including possible delays or restrictions upon a Fund's ability to recover the loaned securities or dispose of the collateral for the loan, which could give rise to loss because of adverse market action, expenses and/or delays in connection with the disposition of the underlying securities.

Restricted Securities. The Funds may purchase restricted securities. Restricted securities are securities that may not be sold freely to the public absent registration under the Securities Act of 1933, as amended (the "1933 Act"), or an exemption from registration. Institutional markets for restricted securities have developed as a result of the promulgation of Rule 144A under the 1933 Act, which provides a "safe harbor" from 1933 Act registration requirements for qualifying sales to institutional investors. When Rule 144A restricted securities present an attractive investment opportunity and meet other selection criteria, a Fund may make these investments whether or not these securities are "illiquid" depending on the market that exists for the particular security. The Board has delegated the responsibility for determining the liquidity of Rule 144A restricted securities that the Funds may invest in to the Adviser.

Short Sales. The Funds may engage in short sales that are either "uncovered" or "against the box." A short sale is "against the box" if at all times during which the short position is open, a Fund owns at least an equal amount of the securities or securities convertible into, or exchangeable without further consideration for, securities of the same issue as the securities that are sold short. A short sale against the box is a taxable transaction to a Fund with respect to the securities that are sold short.

Uncovered short sales are transactions under which the Funds sell a security it does not own. To complete such a transaction, a Fund must borrow the security to make delivery to the buyer. A Fund then is obligated to replace the security borrowed by purchasing the security at the market price at the time of the replacement. The price at such time may be more or less than the price at which the security was sold by the Fund. Until the security is replaced, the Fund is required to pay the lender amounts equal to any dividends or interest that accrue during the period of the loan. To borrow the security, the Fund also may be required to pay a premium, which would increase the cost of the security sold. The proceeds of the short sale will be retained by the broker, to the extent necessary to meet margin requirements, until the short position is closed out.

When-Issued, Delayed-Delivery and Forward-Delivery Transactions. A when-issued security is one whose terms are available and for which a market exists, but which has not been issued. In a forward delivery transaction, a Fund contracts to purchase securities for a fixed price at a future date beyond customary settlement time. "Delayed-delivery" refers to securities transactions on the secondary market where settlement occurs in the future. In each of these transactions, the parties fix the payment obligation and the interest rate that they will receive on the securities at the time the parties enter the commitment; however, they do not pay money or deliver securities until a later date. Typically, no income accrues on securities a Fund has committed to purchase before the securities are delivered. A Fund will enter into these types of transactions only with the intention of actually acquiring the securities, but may sell these securities before the settlement date.

A Fund may use when-issued, delayed-delivery and forward delivery transactions to secure what it considers an advantageous price and yield at the time of purchase. When a Fund engages in when-issued, delayed-delivery or forward delivery transactions, it relies on the other party to consummate the sale. If the other party fails to complete the sale, the Fund may miss the opportunity to obtain the security at a favorable price or yield.

When purchasing a security on a when-issued, delayed-delivery, or forward delivery basis, a Fund assumes the rights and risks of ownership of the security, including the risk of price and yield changes. At the time of settlement, the market value of the security may be more or less than the purchase price. The yield available in the market when the delivery takes place also may be higher than those obtained in the transaction itself. Because the Fund does not pay for the security until the delivery date, these risks are in addition to the risks associated with its other investments.

The Derivatives Rule permits a Fund to enter into when-issued or delayed delivery basis securities notwithstanding the limitation on the issuance of senior securities in Section 18 of the 1940 Act, provided that the Fund intends to physically settle the transaction and the transaction will settle within 35 days of its trade date. If a when-issued or delayed delivery basis security entered into by a Fund does not satisfy those requirements, the Fund would need to comply with the Derivatives Rule with respect to its when issued or delayed delivery transactions, which are considered derivatives transactions under the Derivatives Rule. See "Derivatives – Rule 18f-4 under the 1940 Act" above.

Special Risks of Cyber Attacks. As with any entity that conducts business through electronic means in the modern marketplace, the Funds, and their service providers, may be susceptible to operational and information security risks resulting from cyber attacks. Cyber attacks include, among other behaviors, stealing or corrupting data maintained online or digitally, denial of service attacks on websites, the unauthorized monitoring, release, misuse, loss, destruction or corruption of confidential information, unauthorized access to relevant systems, compromises to networks or devices that the Funds and their service providers use to service the Funds' operations, ransomware, operational disruption or failures in the physical infrastructure or operating systems that support the Funds and their service providers, or various other forms of cyber security breaches. Cyber attacks affecting the Funds or the Adviser, the Funds' distributor, custodian, or any other of the Funds' intermediaries or service providers may adversely impact the Funds and their shareholders, potentially resulting in, among other things, financial losses or the inability of Fund shareholders to transact business. For instance, cyber attacks may interfere with the processing of shareholder transactions, impact a Fund's ability to calculate its NAV, cause the release of private shareholder information or confidential business information, impede trading, subject the Fund to regulatory fines or financial losses, and/or cause reputational damage. The Funds also may incur additional costs for cyber security risk management purposes designed to mitigate or prevent the risk of cyber attacks. These costs may be ongoing because threats of cyber attacks are constantly evolving as cyber attackers become more sophisticated and their techniques become more complex. Similar types of cyber security risks are also present for issuers of securities in which the Funds may invest, which could result in material adverse consequences for these issuers and may cause the Funds' investments in such companies to lose value. There can be no assurance that the Funds, the Funds' service providers, or the issuers of the securities in which the Funds invest will not suffer losses relating to cyber attacks or other information security breaches in the future.

LIBOR Replacement Risk. The Funds may be exposed to financial instruments that recently transitioned from, or continue to be tied to, the London Interbank Offered Rate (“LIBOR”) to determine payment obligations, financing terms, hedging strategies or investment value. Such instruments may include bank loans, derivatives, floating rate securities, and other assets or liabilities. The United Kingdom’s Financial Conduct Authority (“FCA”), which regulates LIBOR, has ceased publishing all LIBOR settings on a representative basis. In April 2023, however, the FCA announced that some USD LIBOR settings will continue to be published under a synthetic methodology until September 30, 2024 for certain legacy contracts.

The Secured Overnight Financing Rate (“SOFR”), which is a broad measure of the cost of borrowing cash overnight collateralized by U.S. Treasury securities in the repurchase agreement market, has been used increasingly on a voluntary basis in new instruments and transactions. Under U.S. regulations that implement a statutory fallback mechanism to replace LIBOR, benchmark rates based on SOFR have replaced LIBOR in different categories of financial contracts.

Neither the effect of the LIBOR transition process nor its ultimate success can yet be known. While some existing LIBOR-based instruments may contemplate a scenario where LIBOR is no longer available by providing for an alternative rate-setting methodology, there may be significant uncertainty regarding the effectiveness of any such alternative methodologies to replicate LIBOR. Not all existing LIBOR-based instruments may have alternative rate-setting provisions and there remains uncertainty regarding the willingness and ability of issuers to add alternative rate-setting provisions in certain existing instruments. Parties to contracts, securities, or other instruments using LIBOR may disagree on transition rates or the application of transition regulation, potentially resulting in uncertainty of performance and the possibility of litigation. The Funds may have instruments linked to other interbank offered rates that may also cease to be published in the future.

General Market and Geopolitical Risk. Some countries and regions in which a Fund invests have experienced war (including Russia’s military invasion of Ukraine), terrorism, social unrest, government defaults, government shutdowns, economic uncertainty, sanctions or the threat of sanctions, natural and environmental disasters, the spread of infectious illness, widespread disease or other public health issues such as pandemics and epidemics (including those caused by COVID-19), and/or systemic market dislocations (including due to events outside of such countries or regions). Such events have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally. Whether or not a Fund invests in securities of issuers located in countries impacted by such events, these and other events could negatively affect the value and liquidity of the Fund’s investments due to the interconnected nature of the global economy and capital markets, which in turn could negatively impact the Fund’s performance and cause losses on your investment in the Fund.

INVESTMENT LIMITATIONS

Fundamental Policies

The following investment limitations are fundamental policies of each Fund that cannot be changed without approval by the vote of a majority of the outstanding shares of such Fund. The phrase “majority of the outstanding shares” means the vote of (i) 67% or more of a Fund’s shares present at a meeting, if more than 50% of the outstanding shares of the Fund are present or represented by proxy, or (ii) more than 50% of the Fund’s outstanding shares, whichever is less.

1. Each Fund may purchase securities of an issuer, except if such purchase would cause the Fund to fail to satisfy the diversification requirement for a diversified management company under the 1940 Act, the rules or regulations thereunder or any exemption therefrom, as such statute, rules or regulations may be amended or interpreted from time to time.
2. Each Fund may not concentrate investments in a particular industry or group of industries, as concentration is defined under the 1940 Act, the rules and regulations thereunder or any exemption therefrom, as such statute, rules or regulations may be amended or interpreted from time to time, except that the Fund may invest without limitation in securities issued or guaranteed by the U.S. government, its agencies or instrumentalities and repurchase agreements involving such securities or tax-exempt obligations of state or municipal governments and their political subdivisions.
3. Each Fund may borrow money or issue senior securities (as defined under the 1940 Act), except as prohibited under the 1940 Act, the rules and regulations thereunder or any exemption therefrom, as such statute, rules or regulations may be amended or interpreted from time to time.
4. Each Fund may make loans, except as prohibited under the 1940 Act, the rules and regulations thereunder or any exemption therefrom, as such statute, rules or regulations may be amended or interpreted from time to time.
5. Each Fund may purchase or sell commodities or real estate, except as prohibited under the 1940 Act, the rules and regulations thereunder or any exemption therefrom, as such statute, rules or regulations may be amended or interpreted from time to time.
6. Each Fund may underwrite securities issued by other persons, except as prohibited under the 1940 Act, the rules and regulations thereunder or any exemption therefrom, as such statute, rules or regulations may be amended or interpreted from time to time.

Non-Fundamental Policies

Each Fund’s investment objective as well as the following investment limitations of each Fund are non-fundamental and may be changed by the Board without shareholder approval.

1. Each Fund may not invest in unmarketable interests in real estate limited partnerships or invest directly in real estate. For the avoidance of doubt, the foregoing policy does not prevent a Fund from, among other things, purchasing marketable securities of companies that deal in real estate or interests therein (including REITs).

2. Each Fund may purchase or sell financial and physical commodities, commodity contracts based on (or relating to) physical commodities or financial commodities and securities and derivative instruments whose values are derived from (in whole or in part) physical commodities or financial commodities.

The following descriptions of certain provisions of the 1940 Act may assist investors in understanding the above policies and restrictions.

Diversification. Under the 1940 Act and the rules, regulations and interpretations thereunder, a “diversified company,” as to 75% of its total assets, may not purchase securities of any issuer (other than obligations of, or guaranteed by, the U.S. government or its agencies, or instrumentalities or securities of other investment companies) if, as a result, more than 5% of its total assets would be invested in the securities of such issuer, or more than 10% of the issuer’s voting securities would be held by the fund.

Concentration. The 1940 Act requires that every investment company have a fundamental investment policy regarding concentration. The SEC has defined concentration as investing 25% or more of an investment company’s total assets in any particular industry or group of industries, with certain exceptions. For purposes of a Fund’s concentration policy, the Fund may classify and re-classify companies in a particular industry and define and re-define industries in any reasonable manner, consistent with SEC and SEC staff guidance.

Borrowing. The 1940 Act presently allows an investment company to borrow from any bank in an amount up to 33 1/3% of its total assets (including the amount borrowed) and to borrow for temporary purposes in an amount not exceeding 5% of the value of its total assets.

Lending. Under the 1940 Act, an investment company may make loans only if expressly permitted by its investment policies.

Senior Securities. Senior securities may include any obligation or instrument issued by a fund evidencing indebtedness. The 1940 Act generally prohibits funds from issuing senior securities, although the 1940 Act does provide allowances for certain borrowings. In addition, the Derivatives Rule permits a fund to enter into derivatives transactions, notwithstanding the prohibitions and restrictions on the issuance of senior securities under the 1940 Act, provided that the fund complies with the conditions of the Derivatives Rule.

Real Estate and Commodities. The 1940 Act does not directly restrict an investment company’s ability to invest in real estate or commodities, but does require that every investment company have a fundamental investment policy governing these investments.

Underwriting. Under the 1940 Act, underwriting securities involves an investment company purchasing securities directly from an issuer for the purpose of selling (distributing) these securities or participating in any such activity either directly or indirectly. Under the 1940 Act, a diversified fund may not make any commitment as underwriter, if immediately thereafter the amount of its outstanding underwriting commitments, plus the value of its investments in securities of issuers (other than investment companies) of which it owns more than 10% of the outstanding voting securities, exceeds 25% of the value of its total assets.

Except with respect to the Funds’ policy concerning borrowing, if a percentage restriction is adhered to at the time of an investment, a later increase or decrease in percentage resulting from changes in values or assets will not constitute a violation of such restriction. With respect to the limitation on borrowing, in the event that a subsequent change in net assets or other circumstances cause a Fund to exceed its limitation, the Fund will take steps to bring the aggregate amount of borrowing back within the limitations within three days thereafter (not including Sundays and holidays).

THE ADVISER

General. Penn Mutual Asset Management, LLC (the “Adviser” or “PMAM”), a Pennsylvania limited liability company, serves as the investment adviser to the Funds. The Adviser’s principal place of business is located at Eight Tower Bridge, 161 Washington Street, Suite 1111, Conshohocken, Pennsylvania 19248. The Adviser is a wholly-owned subsidiary of The Penn Mutual Life Insurance Company (“Penn Mutual”), a life insurance company that has been in the insurance and investment business since the mid-1800s. As of December 31, 2023, the Adviser had approximately \$33.7 billion in assets under management.

The Adviser makes investment decisions for the Funds and continuously reviews, supervises and administers each Fund’s investment program. The Board oversees the Adviser and establishes policies that the Adviser must follow in its management activities.

Advisory Agreement. The Trust and the Adviser have entered into an investment advisory agreement dated May 18, 2018 (the “Advisory Agreement”) with respect to the Funds. Under the Advisory Agreement, the Adviser serves as the investment adviser and makes investment decisions for each Fund and continuously reviews, supervises and administers the investment program of each Fund, subject to the oversight of, and policies established by, the Board.

After the initial two-year term, the continuance of the Advisory Agreement must be specifically approved at least annually: (i) by the vote of the Trustees or by a vote of the outstanding voting securities of each Fund; and (ii) by the vote of a majority of the Trustees who are not parties to the Advisory Agreement or “interested persons” of any party thereto, cast in person at a meeting called for the purpose of voting on such approval. The Advisory Agreement will terminate automatically in the event of its assignment, and is terminable at any time without penalty by the Trustees or, with respect to a Fund, by a majority of the outstanding voting securities of that Fund on at least 30 days’ written notice to the Adviser, or, by the Adviser, on not more than 60 days’ nor less than 30 days’ written notice to the Trust. As used in the Advisory Agreement, the terms “majority of the outstanding voting securities,” “interested persons” and “assignment” have the same meaning as such terms in the 1940 Act.

Advisory Fees Paid to the Adviser. For its services under the Advisory Agreement, the Adviser is entitled to a fee, which is calculated daily and paid monthly, at the following annual rates based on the average daily net assets of each Fund:

Fund	Advisory Fee Rate
Strategic Income Fund	0.45%
1847 Income Fund	0.45%

The Adviser has contractually agreed to waive fees and reimburse expenses to the extent necessary to keep total annual Fund operating expenses (excluding any class-specific expenses, interest, taxes, brokerage commissions, and other costs and expenses relating to the securities that are purchased and sold by the Fund, acquired fund fees and expenses, other expenditures which are capitalized in accordance with generally accepted accounting principles, and other non-routine expenses (collectively, “excluded expenses”)) from exceeding certain levels as set forth below until May 31, 2025 (each, a “contractual expense limit”). This agreement may be terminated by: (i) the Board, for any reason at any time; or (ii) the Adviser, upon ninety (90) days’ prior written notice to the Trust, effective as of the close of business on May 31, 2025.

Fund	Contractual Expense Limit
Strategic Income Fund	1.00%
1847 Income Fund	0.65%

In addition, the Adviser may receive from a Fund the difference between the total annual Fund operating expenses (not including excluded expenses) and the contractual expense limit to recoup all or a portion of its prior fee waivers or expense reimbursements made during the three-year period preceding the recoupment if at any point total annual Fund operating expenses (not including excluded expenses) are below the contractual expense limit (i) at the time of the fee waiver and/or expense reimbursement and (ii) at the time of the recoupment.

For the fiscal years ended December 31, 2021, 2022 and 2023, the Funds paid the Adviser the following advisory fees:

Fund	Contractual Advisory Fees			Fees Waived by the Adviser¹			Total Fees Paid to the Adviser (After Waivers)		
	2021	2022	2023	2021	2022	2023	2021	2022	2023
Strategic Income Fund	\$549,691	\$501,815	\$515,028	\$0	\$0	\$0	\$549,691	\$501,815	\$515,028
1847 Income Fund	\$113,555	\$167,039	\$190,639	\$113,555	\$167,039	\$160,734	\$0	\$0	\$29,905

¹ For the fiscal years ended December 31, 2021 and 2022, the Adviser additionally reimbursed fees of \$54,871 and \$5,901, respectively, for the 1847 Income Fund to maintain the stated expense cap under its contractual expense limitation agreement.

THE PORTFOLIO MANAGERS

This section includes information about the Funds' portfolio managers, including information about other accounts they manage, the dollar range of Fund shares they own and how they are compensated.

Compensation. Investment professional compensation consists primarily of a base salary, which is fixed and reviewed annually, and a bonus. The bonus portion of compensation is based on the following factors: The Penn Mutual Life Corporate Bonus Plan goals which are specific, weighted performance goals deemed key measurements critical to Penn Mutual's success relative to the employee's role with the organization; investment performance relative to narrow benchmarks for various time periods; and PMAM results based on factors such as assets under management, net income, and investment performance. In addition, all PMAM employees, including portfolio managers, are eligible to receive Special Recognition Awards (SRAs) and/or Discretionary Bonus Awards throughout the year to reward extraordinary achievement/results. All employees are also eligible to participate in a 401(k) plan sponsored by Penn Mutual which features a limited corporate matching contribution. Lastly, all employees are eligible to receive an annual profit-sharing contribution based upon a percentage of eligible compensation.

Fund Shares Owned by Portfolio Managers. The Funds are required to show the dollar amount range of each portfolio manager's "beneficial ownership" of shares of each Fund as of the end of the most-recently-completed fiscal year. Dollar amount ranges disclosed are established by the SEC. "Beneficial ownership" is determined in accordance with Rule 16a-1(a)(2) under the Securities Exchange Act of 1934, as amended (the "1934 Act").

Name	Dollar Range of Fund Shares Owned (Fund) ¹
George Cipolloni III	\$500,001 - \$1,000,000 (1847 Income Fund)
Scott Ellis	\$10,001 - \$50,000 (1847 Income Fund)
Mark Heppenstall	\$100,001 - \$500,000 (Strategic Income Fund)
Zhiwei Ren	None
Greg Zappin	None

¹ Valuation date is December 31, 2023.

Other Accounts. In addition to the Funds, the portfolio managers also may be responsible for the day-to-day management of certain other accounts, as indicated by the following table. None of these accounts are subject to a performance-based advisory fee. The information below is provided as of December 31, 2023.

Name	Registered Investment Companies		Other Pooled Investment Vehicles		Other Accounts	
	Number of Accounts	Total Assets (in Millions)	Number of Accounts	Total Assets (in Millions)	Number of Accounts	Total Assets (in Millions)
George Cipolloni III	0	\$0	1	\$69	5	\$23,719
Scott Ellis	1	\$130	1	\$69	5	\$23,719
Mark Heppenstall	4	\$859	0	\$0	6	\$23,900
Zhiwei Ren	9	\$1,409	0	\$0	6	\$23,900
Greg Zappin	4	\$859	1	\$69	6	\$23,900

Conflicts of Interest. PMAM's portfolio managers manage multiple accounts, including the Funds. The portfolio managers make decisions for each portfolio taking into account the investment objectives, policies, guidelines and other relevant consideration that are applicable to that portfolio. PMAM believes that its written policies and procedures are reasonably designed to minimize potential conflicts of interest and to prevent material conflicts of interest that may arise when managing portfolios for multiple accounts with similar investment objectives.

PMAM does not believe that any material conflicts exist in connection with the portfolio managers' management of the investment of the Funds and the investments of the other accounts referenced in the table above.

THE ADMINISTRATOR

General. SEI Investments Global Funds Services (the "Administrator"), a Delaware statutory trust, has its principal business offices at One Freedom Valley Drive, Oaks, Pennsylvania 19456. SEI Investments Management Corporation ("SIMC"), a wholly-owned subsidiary of SEI Investments Company ("SEI Investments"), is the owner of all beneficial interest in the Administrator. SEI Investments and its subsidiaries and affiliates, including the Administrator, are leading providers of funds evaluation services, trust accounting systems, and brokerage and information services to financial institutions, institutional investors, and money managers. The Administrator and its affiliates also serve as administrator or sub-administrator to other mutual funds.

Administration Agreement with the Trust. The Trust and the Administrator have entered into an amended and restated administration agreement dated November 16, 2018, as amended (the "Administration Agreement"). Under the Administration Agreement, the Administrator provides the Trust with administrative services, including regulatory reporting and all necessary office space, equipment, personnel, and facilities.

The Administration Agreement provides that the Administrator shall not be liable for any error of judgment or mistake of law or for any loss suffered by the Trust in connection with the matters to which the Administration Agreement relates, except a loss resulting from willful misfeasance, bad faith or gross negligence on the part of the Administrator in the performance of its duties or from reckless disregard by it of its duties and obligations thereunder.

Administration Fees Paid to the Administrator. For its services under the Administration Agreement, the Administrator is paid a fee, which varies based on the average daily net assets of the Funds, subject to certain minimums. For the fiscal years ended December 31, 2021, 2022 and 2023, the Funds paid the following amount for these services:

Administration Fees Paid			
Fund	2021	2022	2023
Strategic Income Fund	\$109,935	\$100,365	\$103,007
1847 Income Fund	\$100,010	\$100,010	\$100,010

THE DISTRIBUTOR

General. The Trust and SEI Investments Distribution Co. (the “Distributor”), a wholly-owned subsidiary of SEI Investments and an affiliate of the Administrator, are parties to a distribution agreement dated February 12, 2014, as amended (“Distribution Agreement”), whereby the Distributor acts as principal underwriter for the Trust’s shares. The principal business address of the Distributor is One Freedom Valley Drive, Oaks, Pennsylvania 19456.

The continuance of the Distribution Agreement must be specifically approved at least annually (i) by the vote of the Trustees or by a vote of the majority of the outstanding voting securities of the Trust and (ii) by the vote of a majority of the Trustees who are not “interested persons” of the Trust and have no direct or indirect financial interest in the operations of the Distribution Agreement or any related agreement, cast in person at a meeting called for the purpose of voting on such approval. The Distribution Agreement will terminate automatically in the event of its assignment (as such term is defined in the 1940 Act), and is terminable at any time without penalty by the Board or by a majority of the outstanding voting securities of the Trust, or by the Distributor, upon not less than 60 days’ written notice to the other party.

PAYMENTS TO FINANCIAL INTERMEDIARIES

The Adviser and/or its affiliates, in their discretion, may make payments from their own resources and not from Fund assets to affiliated or unaffiliated brokers, dealers, banks (including bank trust departments), trust companies, registered investment advisers, financial planners, retirement plan administrators, insurance companies, and any other institution having a service, administration, or any similar arrangement with the Funds, their service providers or their respective affiliates, as incentives to help market and promote the Funds and/or in recognition of their distribution, marketing, administrative services, and/or processing support.

These additional payments may be made to financial intermediaries that sell Fund shares or provide services to the Funds, the Distributor or shareholders of the Funds through the financial intermediary’s retail distribution channel and/or fund supermarkets. Payments may also be made through the financial intermediary’s retirement, qualified tuition, fee-based advisory, wrap fee bank trust, or insurance (*e.g.*, individual or group annuity) programs. These payments may include, but are not limited to: placing the Funds in a financial intermediary’s retail distribution channel or on a preferred or recommended fund list; providing business or shareholder financial planning assistance; educating financial intermediary personnel about the Funds; providing access to sales and management representatives of the financial intermediary; promoting sales of Fund shares; providing marketing and educational support; maintaining share balances and/or for sub-accounting, administrative, or shareholder transaction processing services. A financial intermediary may perform the services itself or may arrange with a third party to perform the services.

The Adviser and/or its affiliates may also make payments from their own resources to financial intermediaries for costs associated with the purchase of products or services used in connection with sales and marketing, participation in and/or presentation at conferences or seminars, sales or training programs, client and investor entertainment, and other sponsored events. The costs and expenses associated with these efforts may include travel, lodging, sponsorship at educational seminars and conferences, entertainment, and meals to the extent permitted by law.

Revenue sharing payments may be negotiated based on a variety of factors, including the level of sales, the amount of Fund assets attributable to investments in the Funds by financial intermediaries' customers, a flat fee, or other measures as determined from time to time by the Adviser and/or its affiliates. A significant purpose of these payments is to increase the sales of Fund shares, which in turn may benefit the Adviser through increased fees as Fund assets grow.

Investors should understand that some financial intermediaries may also charge their clients fees in connection with purchases of shares or the provision of shareholder services.

THE TRANSFER AGENT

SS&C Global Investor & Distribution Solutions, Inc., 333 W. 11th Street, Kansas City, Missouri 64105 (the "Transfer Agent"), serves as the Funds' transfer agent.

THE CUSTODIAN

Brown Brothers Harriman & Co., 40 Water Street, Boston, Massachusetts, 02109 (the "Custodian"), acts as custodian of the Funds. The Custodian holds cash, securities, and other assets of the Funds as required by the 1940 Act.

INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

PricewaterhouseCoopers LLP, Two Commerce Square, 2001 Market Street, Suite 1800, serves as the independent registered public accounting firm for the Funds. The financial statements and notes thereto incorporated by reference for the Funds have been audited by PricewaterhouseCoopers LLP, as indicated in their report with respect thereto, and are incorporated by reference in reliance on the authority of their report as experts in accounting and auditing.

LEGAL COUNSEL

Morgan, Lewis & Bockius LLP, 2222 Market Street, Philadelphia, Pennsylvania 19103-3007, serves as legal counsel to the Trust.

SECURITIES LENDING

The Funds did not engage in securities lending activities during the fiscal year ended December 31, 2023.

TRUSTEES AND OFFICERS OF THE TRUST

Board Responsibilities. The management and affairs of the Trust and its series, including the Funds described in this SAI, are overseen by the Trustees. The Board has approved contracts, as described above, under which certain companies provide essential management services to the Trust.

Like most mutual funds, the day-to-day business of the Trust, including the management of risk, is performed by third party service providers, such as the Adviser, the Distributor and the Administrator. The Trustees are responsible for overseeing the Trust's service providers and, thus, have oversight responsibility with respect to risk management performed by those service providers. Risk management seeks to identify and address risks, i.e., events or circumstances that could have material adverse effects on the business, operations, shareholder services, investment performance or reputation of the funds. The funds and their service providers employ a variety of processes, procedures and controls to identify various possible events or circumstances, to lessen the probability of their occurrence and/or to mitigate the effects of such events or circumstances if they do occur. Each service provider is responsible for one or more discrete aspects of the Trust's business (e.g., the Adviser is responsible for the day-to-day management of the Funds' portfolio investments) and, consequently, for managing the risks associated with that business. The Board has emphasized to the Funds' service providers the importance of maintaining vigorous risk management.

The Trustees' role in risk oversight begins before the inception of a fund, at which time certain of the fund's service providers present the Board with information concerning the investment objectives, strategies and risks of the fund as well as proposed investment limitations for the fund. Additionally, the fund's adviser provides the Board with an overview of, among other things, its investment philosophy, brokerage practices and compliance infrastructure. Thereafter, the Board continues its oversight function as various personnel, including the Trust's Chief Compliance Officer, as well as personnel of the adviser and other service providers, such as the fund's independent accountants, make periodic reports to the Audit Committee or to the Board with respect to various aspects of risk management. The Board and the Audit Committee oversee efforts by management and service providers to manage risks to which the funds may be exposed.

The Board is responsible for overseeing the nature, extent and quality of the services provided to the funds by the adviser and receives information about those services at its regular meetings. In addition, on an annual basis, in connection with its consideration of whether to renew the advisory agreement with the adviser, the Board meets with the adviser to review such services. Among other things, the Board regularly considers the adviser's adherence to the funds' investment restrictions and compliance with various fund policies and procedures and with applicable securities regulations. The Board also reviews information about the funds' investments, including, for example, reports on the adviser's use of derivatives in managing the funds, if any, as well as reports on the funds' investments in other investment companies, if any.

The Trust's Chief Compliance Officer reports regularly to the Board to review and discuss compliance issues and fund and adviser risk assessments. At least annually, the Trust's Chief Compliance Officer provides the Board with a report reviewing the adequacy and effectiveness of the Trust's policies and procedures and those of its service providers, including the adviser. The report addresses the operation of the policies and procedures of the Trust and each service provider since the date of the last report; any material changes to the policies and procedures since the date of the last report; any recommendations for material changes to the policies and procedures; and any material compliance matters since the date of the last report.

The Board receives reports from the funds' service providers regarding operational risks and risks related to the valuation and liquidity of portfolio securities. The Adviser makes regular reports to the Board concerning investments for which market quotations are not readily available. Annually, the independent registered public accounting firm reviews with the Audit Committee its audit of the funds' financial statements, focusing on major areas of risk encountered by the funds and noting any significant deficiencies or material weaknesses in the funds' internal controls. Additionally, in connection with its oversight function, the Board oversees fund management's implementation of disclosure controls and procedures, which are designed to ensure that information required to be disclosed by the Trust in its periodic reports with the SEC are recorded, processed, summarized, and reported within the required time periods. The Board also oversees the Trust's internal controls over financial reporting, which comprise policies and procedures designed to provide reasonable assurance regarding the reliability of the Trust's financial reporting and the preparation of the Trust's financial statements.

From their review of these reports and discussions with the adviser, the Chief Compliance Officer, the independent registered public accounting firm and other service providers, the Board and the Audit Committee learn in detail about the material risks of the funds, thereby facilitating a dialogue about how management and service providers identify and mitigate those risks.

The Board recognizes that not all risks that may affect the funds can be identified and/or quantified, that it may not be practical or cost-effective to eliminate or mitigate certain risks, that it may be necessary to bear certain risks (such as investment-related risks) to achieve the funds' goals, and that the processes, procedures and controls employed to address certain risks may be limited in their effectiveness. Moreover, reports received by the Trustees as to risk management matters are typically summaries of the relevant information. Most of the funds' investment management and business affairs are carried out by or through the funds' advisers and other service providers, each of which has an independent interest in risk management but whose policies and the methods by which one or more risk management functions are carried out may differ from the funds' and each other's in the setting of priorities, the resources available or the effectiveness of relevant controls. As a result of the foregoing and other factors, the Board's ability to monitor and manage risk, as a practical matter, is subject to limitations.

Members of the Board. There are six members of the Board, five of whom are not interested persons of the Trust, as that term is defined in the 1940 Act ("independent Trustees"). Mr. Doran, an interested person of the Trust, serves as Chairman of the Board. Mr. Hunt, an independent Trustee, serves as the lead independent Trustee. The Trust has determined its leadership structure is appropriate given the specific characteristics and circumstances of the Trust. The Trust made this determination in consideration of, among other things, the fact that the independent Trustees constitute more than three-quarters of the Board, the fact that the chairperson of each Committee of the Board is an independent Trustee, the amount of assets under management in the Trust, and the number of funds (and classes of shares) overseen by the Board. The Board also believes that its leadership structure facilitates the orderly and efficient flow of information to the independent Trustees from fund management.

The Board has two standing committees: the Audit Committee and the Governance Committee. The Audit Committee and the Governance Committee are chaired by an independent Trustee and composed of all of the independent Trustees. In addition, the Board has a lead independent Trustee.

In his role as lead independent Trustee, Mr. Hunt, among other things: (i) presides over Board meetings in the absence of the Chairman of the Board; (ii) presides over executive sessions of the independent Trustees; (iii) along with the Chairman of the Board, oversees the development of agendas for Board meetings; (iv) facilitates communication between the independent Trustees and management, and among the independent Trustees; (v) serves as a key point person for dealings between the independent Trustees and management; and (vi) has such other responsibilities as the Board or independent Trustees determine from time to time.

Set forth below are the names, years of birth, position with the Trust and length of time served, and the principal occupations and other directorships held during at least the last five years of each of the persons currently serving as a Trustee. There is no stated term of office for the Trustees. Nevertheless, an independent Trustee must retire from the Board as of the end of the calendar year in which such independent Trustee first attains the age of seventy-five years; provided, however, that, an independent Trustee may continue to serve for one or more additional one calendar year terms after attaining the age of seventy-five years (each calendar year a "Waiver Term") if, and only if, prior to the beginning of such Waiver Term: (1) the Governance Committee (a) meets to review the performance of the independent Trustee; (b) finds that the continued service of such independent Trustee is in the best interests of the Trust; and (c) unanimously approves excepting the independent Trustee from the general retirement policy set out above; and (2) a majority of the Trustees approves excepting the independent Trustee from the general retirement policy set out above. Unless otherwise noted, the business address of each Trustee is SEI Investments Company, One Freedom Valley Drive, Oaks, Pennsylvania 19456.

-----------------------------------	-------------------------	---	--

1 Mr. Doran may be deemed to be an “interested” person of the Funds as that term is defined in the 1940 Act by virtue of his affiliation with the Distributor and/or its affiliates.

Individual Trustee Qualifications

The Trust has concluded that each of the Trustees should serve on the Board because of the Trustee’s ability to review and understand information about the Funds provided to the Trustee by management, to identify and request other information the Trustee may deem relevant to the performance of the Trustee’s duties, to question management and other service providers regarding material factors bearing on the management and administration of the Funds, and to exercise the Trustee’s business judgment in a manner that serves the best interests of the Funds’ shareholders. The Trust has concluded that each of the Trustees should serve as a Trustee based on the Trustee’s own experience, qualifications, attributes, and skills as described below.

The Trust has concluded that Mr. Doran should serve as Trustee because of the experience he gained serving as a Partner in the Investment Management and Securities Industry Practice of a large law firm, his experience in and knowledge of the financial services industry, and the experience he has gained serving on other mutual fund boards.

The Trust has concluded that Mr. Hunt should serve as Trustee because of the experience he gained in a variety of leadership roles with different investment management institutions, his experience in and knowledge of the financial services industry, and the experience he has gained as a board member of open-end, closed-end, and private funds investing in a broad range of asset classes, including alternative asset classes.

The Trust has concluded that Mr. Lemke should serve as Trustee because of the extensive experience he gained in the financial services industry, including experience in various senior management positions with financial services firms and multiple years of service with a regulatory agency, his background in controls, including legal, compliance and risk management, and his service as general counsel for several financial services firms.

The Trust has concluded that Ms. Maynard-Elliott should serve as Trustee because of the experience she gained in a variety of leadership roles at a leading industrial company, the experience she has gained as a board member of several prominent companies, and her legal and financial management expertise.

The Trust has concluded that Mr. Nadel should serve as Trustee because of the experience he gained in a variety of leadership roles with an audit firm and various financial services firms, his experience in and knowledge of the financial services industry, and the experience he has gained serving on other mutual fund and operating company boards.

The Trust has concluded that Mr. Yanker should serve as Trustee because of the experience he gained in a variety of leadership roles with the alternative asset management divisions of various financial services firms, his experience in and knowledge of the financial services industry, and the experience he has gained advising institutions on alternative asset management.

In its periodic assessment of the effectiveness of the Board, the Board considers the complementary individual skills and experience of the individual Trustees primarily in the broader context of the Board's overall composition so that the Board, as a body, possesses the appropriate (and appropriately diverse) skills and experience to oversee the business of the funds.

Board Committees. The Board has established the following standing committees:

- **Audit Committee.** The Board has a standing Audit Committee that is composed of each of the independent Trustees. The Audit Committee operates under a written charter approved by the Board. The principal responsibilities of the Audit Committee include: (i) recommending which firm to engage as each fund's independent registered public accounting firm and whether to terminate this relationship; (ii) reviewing the independent registered public accounting firm's compensation, the proposed scope and terms of its engagement, and the firm's independence; (iii) pre-approving audit and non-audit services provided by each fund's independent registered public accounting firm to the Trust and certain other affiliated entities; (iv) serving as a channel of communication between the independent registered public accounting firm and the Trustees; (v) reviewing the results of each external audit, including any qualifications in the independent registered public accounting firm's opinion, any related management letter, management's responses to recommendations made by the independent registered public accounting firm in connection with the audit, reports submitted to the Committee by the internal auditing department of the Administrator that are material to the Trust as a whole, if any, and management's responses to any such reports; (vi) reviewing each fund's audited financial statements and considering any significant disputes between the Trust's management and the independent registered public accounting firm that arose in connection with the preparation of those financial statements; (vii) considering, in consultation with the independent registered public accounting firm and the Trust's senior internal accounting executive, if any, the independent registered public accounting firms' reports on the adequacy of the Trust's internal financial controls; (viii) reviewing, in consultation with each fund's independent registered public accounting firm, major changes regarding auditing and accounting principles and practices to be followed when preparing each fund's financial statements; and (ix) other audit related matters. Mr. Hunt, Mr. Lemke, Ms. Maynard-Elliott, Mr. Nadel and Mr. Yanker currently serve as members of the Audit Committee. Mr. Nadel serves as Chair of the Audit Committee. The Audit Committee meets periodically, as necessary, and met four (4) times during the most recently completed fiscal year.

- Governance Committee.** The Board has a standing Governance Committee that is composed of each of the independent Trustees. The Governance Committee operates under a written charter approved by the Board. The principal responsibilities of the Governance Committee include: (i) considering and reviewing Board governance and compensation issues; (ii) conducting a self-assessment of the Board’s operations; (iii) selecting and nominating all persons to serve as independent Trustees and considering proposals of and making recommendations for “interested” Trustee candidates to the Board; and (iv) reviewing shareholder recommendations for nominations to fill vacancies on the Board if these recommendations are submitted in writing and addressed to the Committee at the Trust’s office. Mr. Hunt, Mr. Lemke, Ms. Maynard-Elliott, Mr. Nadel, and Mr. Yanker currently serve as members of the Governance Committee. Ms. Maynard-Elliott serves as Chair of the Governance Committee. The Governance Committee meets periodically, as necessary, and met one (1) time during the most recently completed fiscal year.

Fund Shares Owned by Board Members. The following table shows the dollar amount range of each Trustee’s “beneficial ownership” of shares of the Funds as of the end of the most-recently-completed calendar year. Dollar amount ranges disclosed are established by the SEC. “Beneficial ownership” is determined in accordance with Rule 16a-1(a)(2) under the 1934 Act. The Trustees and officers of the Trust own less than 1% of the outstanding shares of the Trust.

Name	Dollar Range of Fund Shares (Fund) ¹	Aggregate Dollar Range of Shares (All Funds in the Family of Investment Companies) ^{1,2}
<u>Interested Trustee</u>		
William M. Doran	None	None
<u>Independent Trustees</u>		
Jon C. Hunt	None	None
Thomas P. Lemke	None	None
Nichelle Maynard-Elliott	None	None
Jay C. Nadel	None	None
Randall S. Yanker	None	None

¹ Valuation date is December 31, 2023.

² The Funds are the only funds in the family of investment companies.

Board Compensation. The Trust paid the following fees to the Trustees during the fiscal year ended December 31, 2023.

Name	Aggregate Compensation from the Trust	Pension or Retirement Benefits Accrued as Part of Fund Expenses	Estimated Annual Benefits Upon Retirement	Total Compensation from the Trust and Fund Complex ¹
<u>Interested Trustee</u>				
William M. Doran	\$0	N/A	N/A	\$0 for service on one (1) board
<u>Independent Trustees</u>				
Jon C. Hunt	\$170,088	N/A	N/A	\$170,088 for service on one (1) board
Thomas P. Lemke	\$170,088	N/A	N/A	\$170,088 for service on one (1) board
Nichelle Maynard-Elliott	\$170,088	N/A	N/A	\$170,088 for service on one (1) board
Jay C. Nadel	\$170,088	N/A	N/A	\$170,088 for service on one (1) board
Randall S. Yanker	\$170,088	N/A	N/A	\$170,088 for service on one (1) board

¹ All funds in the Fund Complex are series of the Trust.

Trust Officers. Set forth below are the names, years of birth, position with the Trust and length of time served, and the principal occupations for the last five years of each of the persons currently serving as executive officers of the Trust. There is no stated term of office for the officers of the Trust. Unless otherwise noted, the business address of each officer is SEI Investments Company, One Freedom Valley Drive, Oaks, Pennsylvania 19456. The Chief Compliance Officer is the only officer who receives compensation from the Trust for this officer's services.

Certain officers of the Trust also serve as officers of one or more mutual funds for which SEI Investments or its affiliates act as investment manager, administrator or distributor.

Name and Year of Birth	Position with Trust and Length of Time Served	Principal Occupations in Past 5 Years
Michael Beattie (Born: 1965)	President (since 2014)	Managing Director, SEI Investments, since 2021. Director of Client Service, SEI Investments, from 2004 to 2021.
James Bernstein (Born: 1962)	Vice President (since 2017) Secretary (since 2020)	Attorney, SEI Investments, since 2017. Prior Positions: Self-employed consultant, 2017. Associate General Counsel & Vice President, Nationwide Funds Group and Nationwide Mutual Insurance Company, from 2002 to 2016. Assistant General Counsel & Vice President, Market Street Funds and Provident Mutual Insurance Company, from 1999 to 2002.
John Bourgeois (Born: 1973)	Assistant Treasurer (since 2017)	Fund Accounting Manager, SEI Investments, since 2000.
Eric C. Griffith (Born: 1969)	Vice President and Assistant Secretary (since 2020)	Counsel at SEI Investments since 2019. Vice President and Assistant General Counsel, JPMorgan Chase & Co., from 2012 to 2018.

Matthew M. Maher (Born: 1975)	Vice President and Assistant Secretary (since 2018)	Counsel at SEI Investments since 2018. Attorney, Blank Rome LLP, from 2015 to 2018. Assistant Counsel & Vice President, Bank of New York Mellon, from 2013 to 2014. Attorney, Dilworth Paxson LLP, from 2006 to 2013.
Andrew Metzger (Born: 1980)	Treasurer, Controller and Chief Financial Officer (since 2021)	Director of Fund Accounting, SEI Investments, since 2020. Senior Director, Embark, from 2019 to 2020. Senior Manager, PricewaterhouseCoopers LLP, from 2002 to 2019.
Robert Morrow (Born: 1968)	Vice President (since 2017)	Account Manager, SEI Investments, since 2007.
Stephen F. Panner (Born: 1970)	Chief Compliance Officer (since 2022)	Chief Compliance Officer of SEI Asset Allocation Trust, SEI Daily Income Trust, SEI Institutional Investments Trust, SEI Institutional International Trust, SEI Institutional Managed Trust, SEI Tax Exempt Trust, Adviser Managed Trust, New Covenant Funds, SEI Catholic Values Trust, SEI Exchange Traded Funds, SEI Structured Credit Fund LP, The Advisors' Inner Circle Fund, The Advisors' Inner Circle Fund II, The Advisors' Inner Circle Fund III, Bishop Street Funds, Frost Family of Funds, Gallery Trust, Delaware Wilshire Private Markets Fund, Delaware Wilshire Private Markets Master Fund, Delaware Wilshire Private Markets Tender Fund and Catholic Responsible Investments Funds since September 2022. Chief Compliance Officer of SEI Alternative Income Fund since May 2023. Chief Compliance Officer of Symmetry Panoramic Trust since December 2023. Fund Compliance Officer of SEI Investments Company from February 2011 to September 2022. Fund Accounting Director and CFO and Controller for the SEI Funds from July 2005 to February 2011.
Alexander F. Smith (Born: 1977)	Vice President and Assistant Secretary (since 2020)	Counsel at SEI Investments since 2020. Associate Counsel & Manager, Vanguard, 2012 to 2020. Attorney, Stradley Ronon Stevens & Young, LLP, 2008 to 2012.
Bridget E. Sudall (Born: 1980)	Anti-Money Laundering Compliance Officer and Privacy Officer (from 2015 – May 2022; from November 2022 – June 2023; and since April 2024)	Senior Associate and AML Officer, Morgan Stanley Alternative Investment Partners, from 2011 to 2015. Investor Services Team Lead, Morgan Stanley Alternative Investment Partners, from 2007 to 2011.

PURCHASING AND REDEEMING SHARES

Purchases and redemptions may be made through the Transfer Agent on any day the New York Stock Exchange (“NYSE”) is open for business. Shares of the Funds are offered and redeemed on a continuous basis. Currently, the NYSE is closed for business when the following holidays are observed: New Year’s Day, Martin Luther King Jr. Day, Presidents’ Day, Good Friday, Memorial Day, Juneteenth National Independence Day, Independence Day, Labor Day, Thanksgiving, and Christmas.

It currently is the Trust's policy to pay all redemptions in cash. The Trust retains the right, however, to alter this policy to provide for redemptions in whole or in part by a distribution in-kind of securities held by the Funds in lieu of cash. Shareholders may incur brokerage charges on the sale of any such securities so received in payment of redemptions.

The Trust reserves the right to suspend the right of redemption and/or to postpone the date of payment upon redemption for more than seven days during times when the NYSE is closed, other than during customary weekends or holidays, for any period on which trading on the NYSE is restricted (as determined by the SEC by rule or regulation), or during the existence of an emergency (as determined by the SEC by rule or regulation) as a result of which the disposal or valuation of the Funds' securities is not reasonably practicable, or for such other periods as the SEC has by order permitted. The Trust also reserves the right to suspend sales of shares of the Funds for any period during which the NYSE, the Adviser, the Administrator, the Transfer Agent, and/or the Custodian are not open for business.

DETERMINATION OF NET ASSET VALUE

General Policy. The Funds adhere to Section 2(a)(41), and Rules 2a-4 and 2a-5 thereunder, of the 1940 Act with respect to the valuation of portfolio securities. In general, securities for which market quotations are readily available are valued at current market value, and all other securities are valued at fair value by the Adviser in good faith, and subject to the oversight of the Board. In complying with the 1940 Act, the Trust relies on guidance provided by the SEC and by the SEC staff in various interpretive letters and other guidance.

Equity Securities. Securities listed on a securities exchange, market, or automated quotation system for which quotations are readily available (except for securities traded on NASDAQ), including securities traded over the counter, are valued at the last quoted sale price on an exchange or market (foreign or domestic) on which these securities are traded on the valuation date (or at approximately 4:00 p.m. Eastern Time if this exchange is normally open at that time), or, if there is no such reported sale on the valuation date, at the most-recent quoted bid price. For securities traded on NASDAQ, the NASDAQ Official Closing Price will be used. If these prices are not available or determined to not represent the fair value of the security as of the Funds' pricing time, the security will be valued at fair value as determined in good faith by the Adviser, subject to Board oversight.

Money Market Securities and other Debt Securities. If available, money market securities and other debt securities are priced based upon valuations provided by recognized independent, third-party pricing agents. Such values generally reflect the last reported sales price if the security is actively traded. The third-party pricing agents also may value debt securities by employing methodologies that utilize actual market transactions, broker-supplied valuations, or other methodologies designed to identify the market value for such securities. These methodologies generally consider such factors as security prices, yields, maturities, call features, ratings, and developments relating to specific securities in arriving at valuations. Money market securities and other debt securities with remaining maturities of sixty days or less may be valued at their amortized cost, which approximates market value. If these prices are not available or determined to not represent the fair value of the security as of the Funds' pricing time, the security will be valued at fair value as determined in good faith by the Adviser, subject to Board oversight.

Foreign Securities. The prices for foreign securities are reported in local currency and converted to U.S. dollars using currency exchange rates. Exchange rates are provided daily by recognized independent pricing agents.

Derivatives and Other Complex Securities. Exchange traded options on securities and indices purchased by the Funds generally are valued at their last trade price or, if there is no last trade price, the last bid price. Exchange traded options on securities and indices written by the Funds generally are valued at their last trade price or, if there is no last trade price, the last asked price. In the case of options traded in the over-the-counter market, if the OTC option is also an exchange traded option, the Funds will follow the rules regarding the valuation of exchange traded options. If the OTC option is not also an exchange traded option, the security will be valued at fair value as determined in good faith by the Adviser, subject to Board oversight.

Futures and swaps cleared through a central clearing house (“centrally cleared swaps”) are valued at the settlement price established each day by the board of the exchange on which these instruments are traded. The daily settlement prices for financial futures are provided by an independent source. On days when there is excessive volume or market volatility, or the future or centrally-cleared swap does not end trading by the time the Funds calculate NAV, the settlement price may not be available at the time at which each Fund calculates its NAV. On these days, the best available price (which is typically the last sales price) may be used to value a Fund’s futures or centrally-cleared swaps position.

Foreign currency forward contracts are valued at the current day’s interpolated foreign exchange rate, as calculated using the current day’s spot rate, and the thirty, sixty, ninety, and one-hundred eighty day forward rates provided by an independent source.

If available, non-centrally cleared swaps, collateralized debt obligations, collateralized loan obligations, and bank loans are priced based on valuations provided by an independent third-party pricing agent. If a price is not available from an independent third-party pricing agent, the security will be valued at fair value as determined in good faith using by the Adviser, subject to Board oversight.

Use of Third-Party Independent Pricing Services. Pursuant to contracts with the Administrator, prices for most securities held by the Funds with readily available market quotations are provided by third-party independent pricing agents. The valuations for these securities are reviewed by the Administrator. In accordance with the Adviser’s Valuation Procedures, the Adviser may also use third-party independent pricing agents (reviewed and approved by the Adviser) to fair value certain securities without readily available market quotations (or where market quotations are unreliable).

Fair Value Procedures. Securities for which market prices are not “readily available” or which cannot be valued using the methodologies described above are valued in accordance with Fair Value Procedures established by the Adviser and implemented through the Adviser’s Valuation Committee. In establishing a fair value for an investment, the Adviser will use valuation methodologies established by the Adviser and may consider inputs and methodologies provided by, among others, third-party independent pricing agents, independent broker dealers and/or the Adviser’s own personnel (including investment personnel).

Some of the more common reasons that may necessitate a security being valued using Fair Value Procedures include: the security’s trading has been halted or suspended; the security has been de-listed from a national exchange; the security’s primary trading market is temporarily closed at a time when under normal conditions it would be open; the security has not been traded for an extended period of time; the security’s primary pricing source is not able or willing to provide a price; trading of the security is subject to local government-imposed restrictions; or a significant event with respect to a security has occurred after the close of the market or exchange on which the security principally trades and before the time the Funds calculate NAV. When a security is valued in accordance with the Fair Value Procedures, the Adviser’s Valuation Committee will determine the value after taking into consideration relevant information reasonably available to the Committee.

TAXES

The following is only a summary of certain additional U.S. federal income tax considerations generally affecting the Funds and their shareholders that is intended to supplement the discussion contained in the Prospectus. No attempt is made to present a detailed explanation of the tax treatment of the Funds or their shareholders, and the discussion here and in the Prospectus is not intended as a substitute for careful tax planning. In particular, it does not address investors subject to special rules, such as investors who hold shares through an individual retirement account ("IRA"), 401k, or other tax advantaged accounts. Shareholders are urged to consult their tax advisors with specific reference to their own tax situations, including their state, local, and foreign tax liabilities.

The following general discussion of certain federal income tax consequences is based on the Code and the regulations issued thereunder as in effect on the date of this SAI. New legislation, as well as administrative changes or court decisions, may significantly change the conclusions expressed herein, and may have a retroactive effect with respect to the transactions contemplated herein.

Qualification as a Regulated Investment Company. Each Fund has elected and intends to qualify each year to be treated as a regulated investment company ("RIC"). By following such a policy, each Fund expects to eliminate or reduce to a nominal amount the federal taxes to which it may be subject. If a Fund qualifies as a RIC, it will generally not be subject to federal income taxes on the net investment income and net realized capital gains that it timely distributes to its shareholders. The Board reserves the right not to maintain the qualification of a Fund as a RIC if it determines such course of action to be beneficial to shareholders.

In order to qualify as a RIC under the Code, each Fund must distribute annually to its shareholders at least 90% of its net investment income (which includes dividends, taxable interest, and the excess of net short-term capital gains over net long-term capital losses, less operating expenses) and at least 90% of its net tax-exempt interest income, for each tax year, if any (the "Distribution Requirement") and also must meet certain additional requirements. Among these requirements are the following: (i) at least 90% of each Fund's gross income each taxable year must be derived from dividends, interest, payments with respect to certain securities loans, and gains from the sale or other disposition of stock, securities, or foreign currencies, or other income (including but not limited to gains from options, futures or forward contracts) derived with respect to its business of investing in such stock, securities, or currencies, and net income derived from an interest in a qualified publicly-traded partnership (the "Qualifying Income Test"); and (ii) at the close of each quarter of each Fund's taxable year: (A) at least 50% of the value of each Fund's total assets must be represented by cash and cash items, U.S. government securities, securities of other RICs and other securities, with such other securities limited, in respect to any one issuer, to an amount not greater than 5% of the value of each Fund's total assets and that does not represent more than 10% of the outstanding voting securities of such issuer, including the equity securities of a qualified publicly-traded partnership; and (B) not more than 25% of the value of each Fund's total assets is invested, including through corporations in which a Fund owns a 20% or more voting stock interest, in the securities (other than U.S. government securities or securities of other RICs) of any one issuer or the securities (other than the securities of another RIC) of two or more issuers that a Fund controls and which are engaged in the same or similar trades or businesses or related trades or businesses, or the securities of one or more qualified publicly-traded partnerships (the "Asset Test").

Although each Fund intends to distribute substantially all of its net investment income and may distribute its capital gains for any taxable year, a Fund will be subject to federal income taxation to the extent any such income or gains are not distributed. Each Fund is treated as a separate corporation for federal income tax purposes. A Fund therefore is considered to be a separate entity in determining its treatment under the rules for RICs described herein. Losses in one Fund do not offset gains in another and the requirements (other than certain organizational requirements) for qualifying RIC status are determined at the Fund level rather than at the Trust level.

If a Fund fails to satisfy the Qualifying Income or Asset Tests in any taxable year, such Fund may be eligible for relief provisions if the failures are due to reasonable cause and not willful neglect and if a penalty tax is paid with respect to each failure to satisfy the applicable requirements. Additionally, relief is provided for certain *de minimis* failures of the diversification requirements where a Fund corrects the failure within a specified period. If a Fund fails to maintain qualification as a RIC for a tax year, and the relief provisions are not available, such Fund will be subject to federal income tax at the regular corporate rate (currently 21%) without any deduction for distributions to shareholders. In such case, its shareholders would be taxed as if they received ordinary dividends to the extent of the Fund's current and accumulated earnings and profits, although corporate shareholders could be eligible for the dividends received deduction (subject to certain limitations) and individuals may be able to benefit from the lower tax rates available to qualified dividend income. In addition, a Fund could be required to recognize unrealized gains, pay substantial taxes and interest, and make substantial distributions before requalifying as a RIC.

Each Fund may elect to treat part or all of any “qualified late year loss” as if it had been incurred in the succeeding taxable year in determining the Fund’s taxable income, net capital gain, net short-term capital gain, and earnings and profits. The effect of this election is to treat any such “qualified late year loss” as if it had been incurred in the succeeding taxable year in characterizing Fund distributions for any calendar year. A “qualified late year loss” generally includes net capital loss, net long-term capital loss, or net short-term capital loss incurred after October 31 of the current taxable year (commonly referred to as “post-October losses”) and certain other late-year losses.

The treatment of capital loss carryovers for a Fund is similar to the rules that apply to capital loss carryovers of individuals, which provide that such losses are carried over indefinitely. If a Fund has a “net capital loss” (that is, capital losses in excess of capital gains), the excess of the Fund’s net short-term capital losses over its net long-term capital gains is treated as a short-term capital loss arising on the first day of the Fund’s next taxable year, and the excess (if any) of the Fund’s net long-term capital losses over its net short-term capital gains is treated as a long-term capital loss arising on the first day of the Fund’s next taxable year. The carryover of capital losses may be limited under the general loss limitation rules if a Fund experiences an ownership change as defined in the Code.

Federal Excise Tax. Notwithstanding the Distribution Requirement described above, which generally requires each Fund to distribute at least 90% of its annual investment company taxable income and the excess of its exempt interest income (but does not require any minimum distribution of net capital gain), a Fund will be subject to a nondeductible 4% federal excise tax to the extent it fails to distribute, by the end of the calendar year at least 98% of its ordinary income for that year and 98.2% of its capital gain net income (the excess of short- and long-term capital gains over short- and long-term capital losses) for the one-year period ending on October 31 of such year (including any retained amount from the prior calendar year on which a Fund paid no federal income tax). Each Fund intends to make sufficient distributions to avoid liability for federal excise tax but can make no assurances that such tax will be completely eliminated. For example, a Fund may receive delayed or corrected tax reporting statements from its investments that cause such Fund to accrue additional income and gains after such Fund has already made its excise tax distributions for the year. In such a situation, a Fund may incur an excise tax liability resulting from such delayed receipt of such tax information statements. In addition, a Fund may in certain circumstances be required to liquidate Fund investments in order to make sufficient distributions to avoid federal excise tax liability at a time when the Adviser might not otherwise have chosen to do so, and liquidation of investments in such circumstances may affect the ability of the Fund to satisfy the requirement for qualification as a RIC.

Distributions to Shareholders. Each Fund receives income generally in the form of dividends and interest on investments. This income, plus net short-term capital gains, if any, less expenses incurred in the operation of a Fund, constitutes a Fund's net investment income from which dividends may be paid to you. Any distributions by a Fund from such income will be taxable to you as ordinary income or at the lower capital gains rates that apply to individuals receiving qualified dividend income, whether you take them in cash or in additional shares.

Distributions by a Fund are currently eligible for the reduced maximum tax rate to individuals of 20% (lower rates apply to individuals in lower tax brackets) to the extent that the Fund receives qualified dividend income on the securities it holds and the Fund reports the distributions as qualified dividend income. Qualified dividend income is, in general, dividend income from taxable domestic corporations and certain foreign corporations (*e.g.*, foreign corporations incorporated in a possession of the United States or in certain countries with a comprehensive tax treaty with the United States, or the stock of which is readily tradable on an established securities market in the United States). A dividend will not be treated as qualified dividend income to the extent that: (i) the shareholder has not held the shares on which the dividend was paid for more than 60 days during the 121-day period that begins on the date that is 60 days before the date on which the shares become "ex-dividend" (which is the day on which declared distributions (dividends or capital gains) are deducted from a Fund's assets before it calculates the NAV) with respect to such dividend, (ii) such Fund has not satisfied similar holding period requirements with respect to the securities it holds that paid the dividends distributed to the shareholder, (iii) the shareholder is under an obligation (whether pursuant to a short sale or otherwise) to make related payments with respect to substantially similar or related property, or (iv) the shareholder elects to treat such dividend as investment income under section 163(d)(4)(B) of the Code. Therefore, if you lend your shares in a Fund, such as pursuant to a securities lending arrangement, you may lose the ability to treat dividends (paid while the shares are held by the borrower) as qualified dividend income. Distributions that a Fund receives from an underlying fund taxable as a RIC or from a REIT will be treated as qualified dividend income only to the extent so reported by such underlying fund or REIT. The Funds' investment strategies will significantly limit their ability to distribute dividends eligible to be treated as qualified dividend income.

Distributions by a Fund of its net short-term capital gains will be taxable to you as ordinary income. Capital gain distributions consisting of a Fund's net capital gains will be taxable as long-term capital gains for individual shareholders currently set at a maximum rate of 20% regardless of how long you have held your shares in such Fund. Distributions from capital gains are generally made after applying any available capital loss carryforwards.

In the case of corporate shareholders, a Fund's distributions (other than capital gain distributions) generally qualify for the dividends received deduction to the extent such distributions are so reported and do not exceed the gross amount of qualifying dividends received by the Fund for the year. Generally, and subject to certain limitations (including certain holding period limitations), a dividend will be treated as a qualifying dividend if it has been received from a domestic corporation. The Funds' investment strategies may significantly limit their ability to distribute dividends eligible for the dividends received deduction for corporate shareholders.

A RIC that receives business interest income may pass through its net business interest income for purposes of the tax rules applicable to the interest expense limitations under Section 163(j) of the Code. A RIC's total "Section 163(j) Interest Dividend" for a tax year is limited to the excess of the RIC's business interest income over the sum of its business interest expense and its other deductions properly allocable to its business interest income. A RIC may, in its discretion, designate all or a portion of ordinary dividends as Section 163(j) Interest Dividends, which would allow the recipient shareholder to treat the designated portion of such dividends as interest income for purposes of determining such shareholder's interest expense deduction limitation under Section 163(j). This can potentially increase the amount of a shareholder's interest expense deductible under Section 163(j). In general, to be eligible to treat a Section 163(j) Interest Dividend as interest income, you must have held your shares in a Fund for more than 180 days during the 361-day period beginning on the date that is 180 days before the date on which the share becomes ex-dividend with respect to such dividend. Section 163(j) Interest Dividends, if so designated by a Fund, will be reported to your financial intermediary or otherwise in accordance with the requirements specified by IRS.

To the extent that a Fund makes a distribution of income received by such Fund in lieu of dividends (a “substitute payment”) with respect to securities on loan pursuant to a securities lending transaction, such income will not constitute qualified dividend income to individual shareholders and will not be eligible for the dividends received deduction for corporate shareholders.

If a Fund’s distributions exceed its current and accumulated earnings and profits for the taxable year (as calculated for federal income tax purposes), all or a portion of the distributions made in the same taxable year may be recharacterized as a return of capital to shareholders. A return of capital distribution will generally not be taxable, but will reduce each shareholder’s cost basis in a Fund and result in a higher reported capital gain or lower reported capital loss when those shares on which the distribution was received are sold.

A dividend or distribution received shortly after the purchase of shares reduces the NAV of the shares by the amount of the dividend or distribution and, although in effect a return of capital, will be taxable to the shareholder. If the NAV of shares were reduced below the shareholder’s cost by dividends or distributions representing gains realized on sales of securities, such dividends or distributions would be a return of investment though taxable to the shareholder in the same manner as other dividends or distributions.

Each Fund (or its administrative agent) will inform you of the amount of your ordinary income dividends, qualified dividend income and capital gain distributions, if any, and will advise you of their tax status for federal income tax purposes shortly after the close of each calendar year. If you have not held your shares for a full year, a Fund may report and distribute to you, as ordinary income, qualified dividend income or capital gain, a percentage of income that is not equal to the actual amount of such income earned during the period of your investment in the Fund.

Dividends declared to shareholders of record in October, November, or December and actually paid in January of the following year will be treated as having been received by shareholders on December 31 of the calendar year in which declared. Under this rule, therefore, a shareholder may be taxed in one year on dividends or distributions actually received in January of the following year.

Sales or Redemptions. Sales and redemptions of Fund shares may be taxable transactions for federal and state income tax purposes. Any gain or loss recognized on a sale or redemption of shares of a Fund by a shareholder who holds Fund shares as capital assets will generally be treated as a long-term capital gain or loss if the shares have been held for more than twelve months and otherwise will be treated as a short-term capital gain or loss. However, if shares on which a shareholder has received a net capital gain distribution are subsequently sold or redeemed and such shares have been held for six months or less, any loss recognized will be treated as a long-term capital loss to the extent of the net capital gain distribution. In addition, the loss realized on a sale or other disposition of shares will be disallowed to the extent a shareholder repurchases (or enters into a contract to or option to repurchase) shares within a period of 61 days (beginning 30 days before and ending 30 days after the disposition of the shares). This loss disallowance rule will apply to shares received through the reinvestment of dividends during the 61-day period. If disallowed, the loss will be reflected in an upward adjustment to the basis of the shares acquired.

Each Fund (or its administrative agent) must report to the IRS and furnish to Fund shareholders the cost basis information for purchases of Fund shares. In addition to the requirement to report the gross proceeds from the sale of Fund shares, each Fund (or its administrative agent) is also required to report the cost basis information for such shares and indicate whether these shares have a short-term or long-term holding period. For each sale of Fund shares, a Fund (or its administrative agent) will permit Fund shareholders to elect from among several IRS-accepted cost basis methods, including the average cost basis method. In the absence of an election, each Fund will use the average cost basis method as its default cost basis method. The cost basis method elected by a Fund shareholder (or the cost basis method applied by default) for each sale of Fund shares may not be changed after the settlement date of each such sale of Fund shares. If your shares are held in a brokerage account, your broker may use a different method and you should contact your broker to determine which method it will use. Fund shareholders should consult their tax advisors to determine the best IRS-accepted cost basis method for their tax situation and to obtain more information about cost basis reporting. Shareholders also should carefully review the cost basis information provided to them and make any additional basis, holding period or other adjustments that are required when reporting these amounts on their federal income tax returns.

Net Investment Income Tax. U.S. individuals with income exceeding \$200,000 (\$250,000 if married and filing jointly) are subject to a 3.8% tax on their "net investment income," including interest, dividends, and capital gains (including any capital gains realized on the sale of shares of a Fund).

Tax Treatment of Complex Securities. The Funds may invest in complex securities and these investments may be subject to numerous special and complex tax rules. These rules could affect a Fund's ability to qualify as a RIC, affect whether gains and losses recognized by a Fund are treated as ordinary income or capital gain, accelerate the recognition of income to a Fund and/or defer a Fund's ability to recognize losses, and, in limited cases, subject a Fund to U.S. federal income tax on income from certain of its foreign securities. In turn, these rules may affect the amount, timing, or character of the income distributed to you by a Fund and may require a Fund to sell securities to mitigate the effect of these rules and prevent disqualification of the Fund as a RIC at a time when the Adviser might not otherwise have chosen to do so.

Each Fund is required for federal income tax purposes to mark-to-market and recognize as income for each taxable year its net unrealized gains and losses on certain futures and options contracts subject to section 1256 of the Code ("Section 1256 Contracts") as of the end of the year as well as those actually realized during the year. Gain or loss from Section 1256 Contracts on broad-based indexes required to be marked to market will be 60% long-term and 40% short-term capital gain or loss. Application of this rule may alter the timing and character of distributions to shareholders. A Fund may be required to defer the recognition of losses on Section 1256 Contracts to the extent of any unrecognized gains on offsetting positions held by the Fund. These provisions may also require a Fund to mark-to-market certain types of positions in its portfolio (*i.e.*, to treat them as if they were closed out), which may cause the Fund to recognize income without receiving cash with which to make distributions in amounts necessary to satisfy the Distribution Requirement and for avoiding the excise tax discussed above. Accordingly, in order to avoid certain income and excise taxes, a Fund may be required to liquidate its investments at a time when the Adviser might not otherwise have chosen to do so and which may result in a taxable gain or loss.

If a Fund invests in certain positions, such as zero coupon securities, deferred interest securities or, in general, any other securities with original issue discount (or with market discount if a Fund elects to include market discount in income currently), the Fund must accrue income on such investments for each taxable year, which will generally be prior to the receipt of the corresponding cash payments. However, each Fund must distribute, at least annually, all or substantially all of its net investment income, including such accrued income, to avoid U.S. federal income and excise taxes. Therefore, a Fund may have to dispose of its portfolio securities under disadvantageous circumstances to generate cash or may have to leverage itself by borrowing cash to satisfy distribution requirements.

With respect to investments in STRIPS, Treasury Receipts, and other zero coupon securities which are sold at original issue discount and, thus, do not make periodic cash interest payments, a Fund will be required to include as part of its current income the imputed interest on such obligations even though the Fund has not received any interest payments on such obligations during that period. Because each Fund intends to distribute all of its net investment income to its shareholders, a Fund may have to sell Fund securities to distribute this imputed income which may occur at a time when the Adviser would not have chosen to sell these securities and which may result in taxable gain or loss.

A Fund may acquire a market discount bonds. A market discount bond is a security acquired in the secondary market at a price below its redemption value (or its adjusted issue price if it is also an original issue discount bond). If a Fund invests in a market discount bond, it will be required to treat any gain recognized on the disposition of such market discount bond as ordinary income (instead of capital gain) to the extent of the accrued market discount, unless such Fund elects to include the market discount in income as it accrues as discussed above.

If a Fund owns shares in certain foreign investment entities, referred to as “passive foreign investment companies” or “PFICs,” the Fund will generally be subject to one of the following special tax regimes: (i) the Fund may be liable for U.S. federal income tax, and an additional interest charge, on a portion of any “excess distribution” from such foreign entity or any gain from the disposition of such shares, even if the entire distribution or gain is paid out by the Fund as a dividend to its shareholders; (ii) if the Fund were able and elected to treat a PFIC as a “qualified electing fund” or “QEF,” the Fund would be required each year to include in income, and distribute to shareholders in accordance with the distribution requirements set forth above, the Fund’s pro rata share of the ordinary earnings and net capital gains of the PFIC, whether or not such earnings or gains are distributed to the Fund; or (iii) the Fund may be entitled to mark-to-market annually shares of the PFIC, and, in such event, would be required to distribute to shareholders any such mark-to-market gains in accordance with the distribution requirements set forth above. The Funds intend to make the appropriate tax elections, if possible, and take any additional steps that are necessary to mitigate the effect of these rules. Amounts included in income each year by a Fund arising from a QEF election will be “qualifying income” under the Qualifying Income Test (as described above) even if not distributed to the Fund, if the Fund derives such income from its business of investing in stock, securities or currencies.

Certain Foreign Currency Tax Issues. The Funds’ transactions in foreign currencies and forward foreign currency contracts will generally be subject to special provisions of the Code that, among other things, may affect the character of gains and losses realized by the Funds (*i.e.*, may affect whether gains or losses are ordinary or capital), accelerate recognition of income to the Funds and defer losses. These rules could therefore affect the character, amount and timing of distributions to shareholders. These provisions also may require a Fund to mark-to-market certain types of positions in its portfolio (*i.e.*, treat them as if they were closed out) which may cause the Fund to recognize income without receiving cash with which to make distributions in amounts necessary to satisfy the Distribution Requirements and for avoiding the excise tax described above. Each Fund intends to monitor its transactions, intends to make the appropriate tax elections, and intends to make the appropriate entries in its books and records when it acquires any foreign currency or forward foreign currency contract in order to mitigate the effect of these rules so as to prevent disqualification of the Fund as a RIC and minimize the imposition of income and excise taxes. Accordingly, a Fund may be required to liquidate its investments at a time when the Adviser might not otherwise have chosen to do so.

Foreign Taxes. Dividends and interest received by the Funds may be subject to income, withholding or other taxes imposed by foreign countries and U.S. possessions that would reduce the yield on the Funds' stock or securities. Tax conventions between certain countries and the United States may reduce or eliminate these taxes. Foreign countries generally do not impose taxes on capital gains with respect to investments by foreign investors.

If more than 50% of the value of a Fund's total assets at the close of its taxable year consists of stocks or securities of foreign corporations, the Fund will be eligible to and intends to file an election with the IRS that may enable shareholders, in effect, to receive either the benefit of a foreign tax credit, or a deduction from such taxes, with respect to any foreign and U.S. possessions income taxes paid by the Fund, subject to certain limitations. Pursuant to the election, the Fund will treat those taxes as dividends paid to its shareholders. Each such shareholder will be required to include a proportionate share of those taxes in gross income as income received from a foreign source and must treat the amount so included as if the shareholder had paid the foreign tax directly. The shareholder may then either deduct the taxes deemed paid by him or her in computing his or her taxable income or, alternatively, use the foregoing information in calculating any foreign tax credit they may be entitled to use against the shareholders' federal income tax. If a Fund makes the election, the Fund (or its administrative agent) will report annually to its shareholders the respective amounts per share of the Fund's income from sources within, and taxes paid to, foreign countries and U.S. possessions. If a Fund does not hold sufficient foreign securities to meet the above threshold, then shareholders will not be entitled to claim a credit or further deduction with respect to foreign taxes paid by the Fund.

A shareholder's ability to claim a foreign tax credit or deduction in respect of foreign taxes paid by a Fund may be subject to certain limitations imposed by the Code, which may result in a shareholder not receiving a full credit or deduction (if any) for the amount of such taxes. In particular, shareholders must hold their Fund shares (without protection from risk of loss) on the ex-dividend date and for at least 15 additional days during the 30-day period surrounding the ex-dividend date to be eligible to claim a foreign tax credit with respect to a given dividend. Shareholders who do not itemize on their federal income tax returns may claim a credit (but no deduction) for such foreign taxes. Even if a Fund were eligible to make such an election for a given year, it may determine not to do so. Shareholders that are not subject to U.S. federal income tax, and those who invest in a Fund through tax-advantaged accounts (including those who invest through IRAs or other tax-advantaged retirement plans), generally will receive no benefit from any tax credit or deduction passed through by a Fund. Under certain circumstances, if a Fund receives a refund of foreign taxes paid in respect of a prior year, the value of Fund shares could be affected or any foreign tax credits or deductions passed through to shareholders in respect of the Fund's foreign taxes for the current year could be reduced.

Tax-Exempt Shareholders. Certain tax-exempt shareholders, including qualified pension plans, IRAs, salary deferral arrangements, 401(k)s, and other tax-exempt entities, generally are exempt from federal income taxation except with respect to their unrelated business taxable income ("UBTI"). Tax-exempt entities are not permitted to offset losses from one trade or business against the income or gain of another trade or business. Certain net losses incurred prior to January 1, 2018 are permitted to offset gain and income created by an unrelated trade or business, if otherwise available. Under current law, the Funds generally serve to block UBTI from being realized by their tax-exempt shareholders. However, notwithstanding the foregoing, the tax-exempt shareholder could realize UBTI by virtue of an investment in a Fund where, for example: (i) the Fund invests in residual interests of Real Estate Mortgage Investment Conduits ("REMICs"); (ii) the Fund invests in a REIT that is a taxable mortgage pool ("TMP") or that has a subsidiary that is a TMP or that invests in the residual interest of a REMIC; or (iii) shares in the Fund constitute debt-financed property in the hands of the tax-exempt shareholder within the meaning of section 514(b) of the Code. Charitable remainder trusts are subject to special rules and should consult their tax advisor. The IRS has issued guidance with respect to these issues and prospective shareholders, especially charitable remainder trusts, are strongly encouraged to consult their tax advisors regarding these issues.

A Fund's shares held in a tax-qualified retirement account will generally not be subject to federal taxation on income and capital gains distributions from the Fund until a shareholder begins receiving payments from their retirement account.

Backup Withholding. A Fund will be required in certain cases to withhold at a rate of 24% and remit to the U.S. Treasury, such withheld on amounts on any distributions payable to any shareholder who: (i) has provided the Fund either an incorrect tax identification number or no number at all; (ii) is subject to backup withholding by the IRS for failure to properly report payments of interest or dividends; (iii) has failed to certify to the Fund that such shareholder is not subject to backup withholding; or (iv) has failed to certify to the Fund that the shareholder is a U.S. person (including a resident alien). Any amounts withheld may be credited against the shareholder's U.S. federal income tax liability, provided the appropriate information is furnished to the IRS.

Non-U.S. Investors. Any non-U.S. investors in the Funds may be subject to U.S. withholding and estate tax and may be subject to additional reporting obligations and therefore encouraged to consult their tax advisors prior to investing in the Funds. Foreign shareholders (*i.e.*, nonresident alien individuals and foreign corporations, partnerships, trusts and estates) are generally subject to U.S. withholding tax at the rate of 30% (or a lower tax treaty rate) on distributions derived from taxable ordinary income. A Fund may, under certain circumstances, report all or a portion of a dividend as an "interest-related dividend" or a "short-term capital gain dividend," which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met. Short-term capital gain dividends received by a nonresident alien individual who is present in the U.S. for a period or periods aggregating 183 days or more during the taxable year are not exempt from this 30% withholding tax. Gains realized by foreign shareholders from the sale or other disposition of shares of a Fund generally are not subject to U.S. taxation, unless the recipient is an individual who is physically present in the U.S. for 183 days or more per year. Foreign shareholders who fail to provide an applicable IRS form may be subject to backup withholding on certain payments from a Fund. Backup withholding will not be applied to payments that are subject to the 30% (or lower applicable treaty rate) withholding tax described in this paragraph. Different tax consequences may result if the foreign shareholder is engaged in a trade or business within the United States. In addition, the tax consequences to a foreign shareholder entitled to claim the benefits of a tax treaty may be different than those described above.

A beneficial holder of shares who is a foreign person may be subject to foreign, state and local income tax and to the U.S. federal estate tax in addition to the U.S. federal income tax consequences referred to above. If a shareholder is eligible for the benefits of a tax treaty, any effectively connected income or gain will generally be subject to U.S. federal income tax on a net basis only if it is also attributable to a permanent establishment or fixed base maintained by the shareholder in the United States.

Under legislation generally known as "FATCA" (the Foreign Account Tax Compliance Act), the Funds are required to withhold 30% of certain ordinary dividends they pay to shareholders that fail to meet prescribed information reporting or certification requirements. In general, no such withholding will be required with respect to a U.S. person or non-U.S. person that timely provides the certifications required by a Fund or its agent on a valid IRS Form W-9 or applicable series of IRS Form W-8, respectively. Shareholders potentially subject to withholding include foreign financial institutions ("FFIs"), such as non-U.S. investment funds, and non-financial foreign entities ("NFFEs"). To avoid withholding under FATCA, an FFI generally must enter into an information sharing agreement with the IRS in which it agrees to report certain identifying information (including name, address, and taxpayer identification number) with respect to its U.S. account holders (which, in the case of an entity shareholder, may include its direct and indirect U.S. owners), and an NFFE generally must identify and provide other required information to the Funds or other withholding agent regarding its U.S. owners, if any. Such non-U.S. shareholders also may fall into certain exempt, excepted or deemed compliant categories as established by regulations and other guidance. A non-U.S. shareholder resident or doing business in a country that has entered into an intergovernmental agreement with the U.S. to implement FATCA will be exempt from FATCA withholding provided that the shareholder and the applicable foreign government comply with the terms of the agreement. Each fund will not pay any additional amounts in respect to any amounts withheld.

A non-U.S. entity that invests in a Fund will need to provide such Fund with documentation properly certifying the entity's status under FATCA in order to avoid FATCA withholding. Non-U.S. investors in the Funds should consult their tax advisors in this regard.

Tax Shelter Reporting Regulations. Under U.S. Treasury regulations, generally, if a shareholder recognizes a loss of \$2 million or more for an individual shareholder or \$10 million or more for a corporate shareholder, the shareholder must file with the IRS a disclosure statement on Form 8886. Direct shareholders of portfolio securities are in many cases excepted from this reporting requirement, but under current guidance, shareholders of a RIC such as a Fund are not excepted. Future guidance may extend the current exception from this reporting requirement to shareholders of most or all RICs. The fact that a loss is reportable under these regulations does not affect the legal determination of whether the taxpayer's treatment of the loss is proper. Shareholders should consult their tax advisors to determine the applicability of these regulations in light of their individual circumstances.

State Taxes. Depending upon state and local law, distributions by the Funds to their shareholders and the ownership of such shares may be subject to state and local taxes. Rules of state and local taxation of dividend and capital gains distributions from RICs often differ from the rules for federal income taxation described above. It is expected that a Fund will not be liable for any corporate excise, income or franchise tax in Delaware if it qualifies as a RIC for federal income tax purposes.

Many states grant tax-free status to dividends paid to you from interest earned on direct obligations of the U.S. government, subject in some states to minimum investment requirements that must be met by the Funds. Investment in Ginnie Mae or Fannie Mae securities, banker's acceptances, commercial paper, and repurchase agreements collateralized by U.S. government securities do not generally qualify for such tax-free treatment. The rules on exclusion of this income are different for corporate shareholders. Shareholders are urged to consult their tax advisors regarding state and local taxes applicable to an investment in the Funds.

Because each shareholder's tax situation is different, shareholders should consult their tax advisor about the tax implications of an investment in the Funds.

FUND TRANSACTIONS

Brokerage Transactions. Generally, equity securities, both listed and over-the-counter, are bought and sold through brokerage transactions for which commissions are payable. Purchases from underwriters will include the underwriting commission or concession, and purchases from dealers serving as market makers will include a dealer's mark-up or reflect a dealer's mark-down. Money market securities and other debt securities usually are bought and sold directly from the issuer or an underwriter or market maker for the securities. Generally, the Funds will not pay brokerage commissions for these purchases. When a debt security is bought from an underwriter, the purchase price will usually include an underwriting commission or concession. The purchase price for securities bought from dealers serving as market makers will similarly include the dealer's mark up or reflect a dealer's mark down. When the Funds execute transactions in the over-the-counter market, it generally will deal with primary market makers unless prices that are more favorable are otherwise obtainable.

In addition, the Adviser may place a combined order for two or more accounts it manages, including the Funds, engaged in the purchase or sale of the same security if, in its judgment, joint execution is in the best interest of each participant and will result in best price and execution. Transactions involving commingled orders are allocated in a manner deemed equitable to each account or fund. Although it is recognized that, in some cases, the joint execution of orders could adversely affect the price or volume of the security that a particular account or the Funds may obtain, it is the opinion of the Adviser that the advantages of combined orders outweigh the possible disadvantages of combined orders.

For the fiscal years ended December 31, 2021, 2022 and 2023, the Funds paid the following aggregate brokerage commissions on portfolio transactions:

Fund	Aggregate Dollar Amount of Brokerage Commissions Paid		
	2021	2022	2023
Strategic Income Fund	\$3,753	\$3,147	\$2,879
1847 Income Fund	\$10,218	\$27,179	\$25,173

Brokerage Selection. The Trust does not expect to use one particular broker or dealer, and when one or more brokers is believed capable of providing the best combination of price and execution, the Adviser may select a broker based upon brokerage or research services provided to the investment adviser. The Adviser may pay a higher commission than otherwise obtainable from other brokers in return for these services only if a good faith determination is made that the commission is reasonable in relation to the services provided.

Section 28(e) of the 1934 Act permits the Adviser, under certain circumstances, to cause the Funds to pay a broker or dealer a commission for effecting a transaction in excess of the amount of commission another broker or dealer would have charged for effecting the transaction in recognition of the value of brokerage and research services provided by the broker or dealer. In addition to agency transactions, the Adviser may receive brokerage and research services in connection with certain riskless principal transactions, in accordance with applicable SEC guidance. Brokerage and research services include: (1) furnishing advice as to the value of securities, the advisability of investing in, purchasing or selling securities, and the availability of securities or purchasers or sellers of securities; (2) furnishing analyses and reports concerning issuers, industries, securities, economic factors and trends, portfolio strategy, and the performance of accounts; and (3) effecting securities transactions and performing functions incidental thereto (such as clearance, settlement, and custody). In the case of research services, the Adviser believes that access to independent investment research is beneficial to its investment decision-making processes and, therefore, to the Funds.

To the extent that services may be a factor in selecting brokers, these services may be in written form or through direct contact with individuals and may include information as to particular companies and securities as well as market, economic, or institutional areas and information which assists in the valuation and pricing of investments. Examples of research-oriented services for which the Adviser might utilize Fund commissions include research reports and other information on the economy, industries, sectors, groups of securities, individual companies, statistical information, political developments, technical market action, pricing and appraisal services, credit analysis, risk measurement analysis, performance, and other analysis. The Adviser may use research services furnished by brokers in servicing all client accounts and not all services may necessarily be used by the Adviser in connection with the Funds or any other specific client account that paid commissions to the broker providing these services. Information so received by the Adviser will be in addition to and not in lieu of the services required to be performed by the Adviser under the Advisory Agreement. Any advisory or other fees paid to the Adviser are not reduced as a result of the receipt of research services.

In some cases the Adviser may receive a service from a broker that has both a “research” and a “non-research” use. When this occurs, the Adviser makes a good-faith allocation, under all the circumstances, between the research and non-research uses of the service. The percentage of the service that is used for research purposes may be paid for with client commissions, while the Adviser will use its own funds to pay for the percentage of the service that is used for non-research purposes. In making this good faith allocation, the Adviser faces a potential conflict of interest, but the Adviser believes that its allocation procedures are reasonably designed to ensure that it appropriately allocates the anticipated use of these services to their research and non-research uses.

From time to time, the Adviser may purchase new issues of securities for clients, including the Funds, in a fixed price offering. In these situations, the seller may be a member of the selling group that will, in addition to selling securities, provide the Adviser with research services. The Financial Industry Regulatory Authority (“FINRA”) has adopted rules expressly permitting these types of arrangements under certain circumstances. Generally, the seller will provide research “credits” in these situations at a rate that is higher than that which is available for typical secondary market transactions. These arrangements may not fall within the safe harbor of Section 28(e).

For the fiscal years ended December 31, 2021, 2022 and 2023, the Funds did not pay any commissions on brokerage transactions directed to brokers pursuant to an agreement or understanding whereby the broker provides research services to the Adviser.

Brokerage with Fund Affiliates. The Funds may execute brokerage or other agency transactions through registered broker-dealer affiliates of either the Funds or the Adviser for a commission in conformity with the 1940 Act and rules promulgated by the SEC. The 1940 Act requires that commissions paid to the affiliate by the Funds for exchange transactions not exceed “usual and customary” brokerage commissions. The rules define “usual and customary” commissions to include amounts which are “reasonable and fair compared to the commission, fee, or other remuneration received or to be received by other brokers in connection with comparable transactions involving similar securities being purchased or sold on a securities exchange during a comparable period of time.” The Trustees, including those who are not “interested persons” of the Funds, have adopted procedures for evaluating the reasonableness of commissions paid to affiliates and review these procedures periodically.

For the fiscal years ended December 31, 2021, 2022 and 2023, the Funds did not pay any brokerage commissions on portfolio transactions effected by affiliated brokers.

Securities of “Regular Broker-Dealers.” The Funds are required to identify any securities of their “regular brokers and dealers” (as such term is defined in the 1940 Act) that each Fund held during their most recent fiscal year. During the fiscal year ended December 31, 2023, the Funds did not hold any securities of their “regular brokers or dealers.”

Portfolio Turnover Rates. Portfolio turnover is calculated by dividing the lesser of total purchases or sales of portfolio securities for the fiscal year by the monthly average value of portfolio securities owned during the fiscal year. Excluded from both the numerator and denominator are amounts relating to securities whose maturities at the time of acquisition were one year or less. Instruments excluded from the calculation of portfolio turnover generally would include the futures contracts in which the Funds may invest since such contracts generally have remaining maturities of less than one year. The Funds at times may hold investments in other short-term instruments, such as repurchase agreements, which are excluded for purposes of computing portfolio turnover. For the fiscal years ended December 31, 2022 and 2023, the Funds’ portfolio turnover rates were as follows:

Portfolio Turnover Rates		
Fund	2022	2023
Strategic Income Fund	82%	74%
1847 Income Fund	77%	74%

PORTFOLIO HOLDINGS

The Board has approved a policy and procedures that govern the timing and circumstances regarding the disclosure of Fund portfolio holdings information to shareholders and third parties. These policies and procedures are designed to ensure that disclosure of information regarding the Funds' portfolio securities is in the best interests of the Funds' shareholders, and include procedures to address conflicts between the interests of the Funds' shareholders, on the one hand, and those of the Adviser, principal underwriter, or any affiliated person of the Funds, the Adviser, or its principal underwriter, on the other. Pursuant to these procedures, the Board has authorized the Adviser's Chief Compliance Officer (the "Authorized Person") to authorize the release of the Funds' portfolio holdings, as necessary, in conformity with the foregoing principles. The Authorized Person, either directly or through reports by the Trust's Chief Compliance Officer, reports quarterly to the Board regarding the operation and administration of these policies and procedures.

Pursuant to applicable law, the Funds are required to disclose their complete portfolio holdings quarterly, within 60 days of the end of each fiscal quarter (currently, each March 31, June 30, September 30 and December 31). The Funds disclose a complete or summary schedule of investments (which includes a Fund's 50 largest holdings in unaffiliated issuers and each investment in unaffiliated issuers that exceeds one percent of the Fund's NAV ("Summary Schedule")) in their Semi-Annual and Annual Reports which are distributed to Fund shareholders. The Funds' complete schedule of investments following the first and third fiscal quarters will be available in quarterly holdings reports filed with the SEC as exhibits to Form N-PORT, and each Fund's complete schedule of investments following the second and fourth fiscal quarters will be available in shareholder reports filed with the SEC on Form N-CSR.

Complete schedules of investments filed with the SEC on Form N-CSR and as exhibits to Form N-PORT are not distributed to Fund shareholders but are available, free of charge, on the SEC's website at www.sec.gov. Should a Fund include only a Summary Schedule rather than a complete schedule of investments in its Semi-Annual and Annual Report, its complete schedule of investments will be available without charge, upon request, by calling 877-PMA-MLLC (877-762-6552).

In addition to the quarterly portfolio holdings disclosure required by applicable law, each Fund will post its complete portfolio holdings on the internet at <https://aicfundholdings.seic.com/> within 60 days after the end of each calendar month. Each Fund will also disclose its top ten holdings within fifteen days after the end of each calendar month on the internet at <https://aicfundholdings.seic.com>. The Adviser may exclude any portion of a Fund's portfolio holdings from such publication when deemed in the best interest of the Fund. The portfolio holdings information placed on the Funds' website generally will remain there until such information is included in a filing on Form N-PORT or Form N-CSR.

In addition to information provided to shareholders and the general public, portfolio holdings information may be disclosed as frequently as daily to the Funds' Adviser, Administrator, Custodian, Transfer Agent, financial printer, pricing vendors, liquidity analytics vendors, class action reclaim vendors and foreign tax reclaim vendors and other vendors that provide the Adviser with various middle office, back office, client reporting and portfolio analytics services in connection with their services to the Funds. From time to time rating and ranking organizations, such as S&P, Broadridge (formerly, Lipper), and Morningstar, Inc., may request non-public portfolio holdings information in connection with rating the Funds. Similarly, institutional investors, financial planners, pension plan sponsors, and/or their consultants or other third-parties may request portfolio holdings information in order to assess the risks of the Funds' portfolio along with related performance attribution statistics. The lag time for these disclosures will vary. The Funds believe that these third parties have legitimate objectives in requesting this portfolio holdings information.

The Funds' policies and procedures provide that the Authorized Person may authorize disclosure of non-public portfolio holdings information to these parties at differing times and/or with different lag times. Prior to making any disclosure to a third party, the Authorized Person must determine that this disclosure serves a reasonable business purpose, is in the best interests of a Fund's shareholders, and that, to the extent conflicts between the interests of a Fund's shareholders and those of the Adviser, principal underwriter, or any affiliated person of the Funds exist, these conflicts are addressed. Portfolio holdings information may be disclosed no more frequently than monthly to ratings agencies, consultants and other qualified financial professionals or individuals. The disclosures will not be made sooner than three days after the date of the information. The Trust's Chief Compliance Officer will regularly review these arrangements and will make periodic reports to the Board regarding disclosure pursuant to such arrangements.

With the exception of disclosures to rating and ranking organizations as described above, the Funds require any third party receiving non-public holdings information to enter into a confidentiality agreement with the Adviser. The confidentiality agreement provides, among other things, that non-public portfolio holdings information will be kept confidential and that the recipient has a duty not to trade on the non-public information and will use this information solely to analyze and rank the Funds, or to perform due diligence and asset allocation, depending on the recipient of the information.

The Trust's policies and procedures prohibit any compensation or other consideration from being paid to or received by any party in connection with the disclosure of portfolio holdings information, including the Funds, the Adviser and their affiliates or recipients of the Funds' portfolio holdings information.

The Adviser may manage other accounts that are not subject to these policies and procedures with investment objectives and strategies that are substantially similar to those of a Fund. Because the portfolio holdings of such accounts may be substantially similar, and in some cases nearly identical, to those of a Fund, an investor in such an account may be able to infer the portfolio holdings of a Fund from the portfolio holdings of the account.

DESCRIPTION OF SHARES

The Declaration of Trust authorizes the issuance of an unlimited number of funds and shares of each fund, each of which represents an equal proportionate interest in that fund with each other share. Shares are entitled upon liquidation to a pro rata share in the net assets of the fund. Shareholders have no preemptive rights. The Declaration of Trust provides that the Trustees may create additional series or classes of shares. All consideration received by the Trust for shares of any additional funds and all assets in which this consideration is invested would belong to that fund and would be subject to the liabilities related thereto. Share certificates representing shares will not be issued. The Funds' shares, when issued, are fully paid and non-assessable.

LIMITATION OF TRUSTEES' LIABILITY

The Declaration of Trust provides that a Trustee shall be liable only for his or her own willful misfeasance, bad faith, gross negligence, or reckless disregard of the duties involved in the conduct of the office of Trustee, and shall not be liable for errors of judgment or mistakes of fact or law. The Trustees shall not be responsible or liable in any event for any neglect or wrongdoing of any officer, agent, employee, investment adviser, or principal underwriter of the Trust, nor shall any Trustee be responsible for the act or omission of any other Trustee. The Declaration of Trust also provides that the Trust shall indemnify each person who is, or has been, a Trustee, officer, employee, or agent of the Trust, and any person who is serving or has served at the Trust's request as a Trustee, officer, employee, or agent of another organization in which the Trust has any interest as a shareholder, creditor or otherwise to the extent and in the manner provided in the By-Laws. However, nothing in the Declaration of Trust shall protect or indemnify a Trustee against any liability for his or her willful misfeasance, bad faith, gross negligence, or reckless disregard of the duties involved in the conduct of the office of Trustee. Nothing contained in this section attempts to disclaim a Trustee's individual liability in any manner inconsistent with the federal securities laws.

PROXY VOTING

The Board has delegated the responsibility for decisions regarding proxy voting for securities held by the Funds to the Adviser. The Adviser will vote these proxies in accordance with its proxy voting policies and procedures, which are included in Appendix B to this SAI.

The Trust is required to disclose annually the Funds' complete proxy voting record during the most recent 12-month period ended June 30 on Form N-PX. This voting record is available: (i) without charge, upon request, by calling 877-PMA-MLLC (877-762-6552); and (ii) on the SEC's website at <http://www.sec.gov>.

CODES OF ETHICS

The Board on behalf of the Trust has adopted a Code of Ethics pursuant to Rule 17j-1 under the 1940 Act. In addition, the Adviser, the Administrator, and the Distributor have adopted Codes of Ethics pursuant to Rule 17j-1. These Codes of Ethics apply to the personal investing activities of trustees, officers, and certain employees ("Access Persons"). Rule 17j-1 and the Codes of Ethics are designed to prevent unlawful practices in connection with the purchase or sale of securities by Access Persons. Under each Code of Ethics, Access Persons are permitted to invest in securities, including securities that may be purchased or held by the Funds, but are required to report their personal securities transactions for monitoring purposes. In addition, certain Access Persons are required to obtain approval before investing in initial public offerings or private placements or are prohibited from making such investments. Copies of these Codes of Ethics are on file with the SEC, and are available to the public.

PRINCIPAL SHAREHOLDERS AND CONTROL PERSONS

As of April 3, 2024, the following persons were record owners (or to the knowledge of the Trust, beneficial owners) of 5% or more of any class of the shares of the Funds. The Trust believes that most of the shares referred to below were held by the below persons in accounts for their fiduciary, agency or custodial customers. Persons beneficially owning more than 25% of a Fund's outstanding shares may be deemed to "control" the Fund within the meaning of the 1940 Act. Shareholders controlling a Fund may have a significant impact on any shareholder vote of the Fund.

APPENDIX A

DESCRIPTION OF RATINGS

Description of Ratings

The following descriptions of securities ratings have been published by Moody's Investors Services, Inc. ("Moody's"), S&P Global Ratings ("S&P"), and Fitch Ratings ("Fitch"), respectively.

Description of Moody's Global Ratings

Ratings assigned on Moody's global long-term and short-term rating scales are forward-looking opinions of the relative credit risks of financial obligations issued by non-financial corporates, financial institutions, structured finance vehicles, project finance vehicles, and public sector entities. Long-term ratings are assigned to issuers or obligations with an original maturity of eleven months or more and reflect both on the likelihood of a default or impairment on contractual financial obligations and the expected financial loss suffered in the event of default or impairment. Short-term ratings are assigned to obligations with an original maturity of thirteen months or less and reflect both on the likelihood of a default or impairment on contractual financial obligations and the expected financial loss suffered in the event of default or impairment.

Description of Moody's Global Long-Term Ratings

Aaa Obligations rated Aaa are judged to be of the highest quality, subject to the lowest level of credit risk.

Aa Obligations rated Aa are judged to be of high quality and are subject to very low credit risk.

A Obligations rated A are judged to be upper-medium grade and are subject to low credit risk.

Baa Obligations rated Baa are judged to be medium-grade and subject to moderate credit risk and as such may possess certain speculative characteristics.

Ba Obligations rated Ba are judged to be speculative and are subject to substantial credit risk.

B Obligations rated B are considered speculative and are subject to high credit risk.

Caa Obligations rated Caa are judged to be speculative of poor standing and are subject to very high credit risk.

Ca Obligations rated Ca are highly speculative and are likely in, or very near, default, with some prospect of recovery of principal and interest.

C Obligations rated C are the lowest rated and are typically in default, with little prospect for recovery of principal or interest.

Note: Moody's appends numerical modifiers 1, 2, and 3 to each generic rating classification from Aa through Caa. The modifier 1 indicates that the obligation ranks in the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking; and the modifier 3 indicates a ranking in the lower end of that generic rating category.

Hybrid Indicator (hyb)

The hybrid indicator (hyb) is appended to all ratings of hybrid securities issued by banks, insurers, finance companies, and securities firms. By their terms, hybrid securities allow for the omission of scheduled dividends, interest, or principal payments, which can potentially result in impairment if such an omission occurs. Hybrid securities may also be subject to contractually allowable write-downs of principal that could result in impairment. Together with the hybrid indicator, the long-term obligation rating assigned to a hybrid security is an expression of the relative credit risk associated with that security.

Description of Moody's Global Short-Term Ratings

P-1 Issuers (or supporting institutions) rated Prime-1 have a superior ability to repay short-term debt obligations.

P-2 Issuers (or supporting institutions) rated Prime-2 have a strong ability to repay short-term debt obligations.

P-3 Issuers (or supporting institutions) rated Prime-3 have an acceptable ability to repay short-term obligations.

NP Issuers (or supporting institutions) rated Not Prime do not fall within any of the Prime rating categories.

Description of Moody's U.S. Municipal Short-Term Obligation Ratings

The Municipal Investment Grade ("MIG") scale is used to rate U.S. municipal cash flow notes, bond anticipation notes and certain other short-term obligations, which typically mature in three years or less. Under certain circumstances, the MIG scale is used to rate bond anticipation notes with maturities of up to five years.

Moody's U.S. municipal short-term obligation ratings are as follows:

MIG 1 This designation denotes superior credit quality. Excellent protection is afforded by established cash flows, highly reliable liquidity support, or demonstrated broad-based access to the market for refinancing.

MIG 2 This designation denotes strong credit quality. Margins of protection are ample, although not as large as in the preceding group.

MIG 3 This designation denotes acceptable credit quality. Liquidity and cash-flow protection may be narrow, and market access for refinancing is likely to be less well-established.

SG This designation denotes speculative-grade credit quality. Debt instruments in this category may lack sufficient margins of protection.

Description of Moody's Demand Obligation Ratings

In the case of variable rate demand obligations ("VRDOs"), Moody's assigns both a long-term rating and a short-term payment obligation rating. The long-term rating addresses the issuer's ability to meet scheduled principal and interest payments. The short-term payment obligation rating addresses the ability of the issuer or the liquidity provider to meet any purchase price payment obligation resulting from optional tenders ("on demand") and/or mandatory tenders of the VRDO. The short-term payment obligation rating uses the Variable Municipal Investment Grade ("VMIG") scale. VMIG ratings with liquidity support use as an input the short-term counterparty risk assessment of the support provider, or the long-term rating of the underlying obligor in the absence of third party liquidity support. Transitions of VMIG ratings with conditional liquidity support differ from transitions of Prime ratings reflecting the risk that external liquidity support will terminate if the issuer's long-term rating drops below investment grade. For VRDOs, Moody's typically assigns a VMIG rating if the frequency of the payment obligation is less than every three years. If the frequency of the payment obligation is less than three years, but the obligation is payable only with remarketing proceeds, the VMIG short-term rating is not assigned and it is denoted as "NR".

Moody's demand obligation ratings are as follows:

VMIG 1 This designation denotes superior credit quality. Excellent protection is afforded by the superior short-term credit strength of the liquidity provider and structural and legal protections.

VMIG 2 This designation denotes strong credit quality. Good protection is afforded by the strong short-term credit strength of the liquidity provider and structural and legal protections.

VMIG 3 This designation denotes acceptable credit quality. Adequate protection is afforded by the satisfactory short-term credit strength of the liquidity provider and structural and legal protections.

SG This designation denotes speculative-grade credit quality. Demand features rated in this category may be supported by a liquidity provider that does not have a sufficiently strong short-term rating or may lack the structural or legal protections.

Description of S&P's Issue Credit Ratings

An S&P issue credit rating is a forward-looking opinion about the creditworthiness of an obligor with respect to a specific financial obligation, a specific class of financial obligations, or a specific financial program (including ratings on medium-term note programs and commercial paper programs). It takes into consideration the creditworthiness of guarantors, insurers, or other forms of credit enhancement on the obligation and takes into account the currency in which the obligation is denominated. The opinion reflects S&P's view of the obligor's capacity and willingness to meet its financial commitments as they come due, and this opinion may assess terms, such as collateral security and subordination, which could affect ultimate payment in the event of default.

Issue credit ratings can be either long-term or short-term. Short-term issue credit ratings are generally assigned to those obligations considered short-term in the relevant market, typically with an original maturity of no more than 365 days. Short-term issue credit ratings are also used to indicate the creditworthiness of an obligor with respect to put features on long-term obligations. S&P would typically assign a long-term issue credit rating to an obligation with an original maturity of greater than 365 days. However, the ratings S&P assigns to certain instruments may diverge from these guidelines based on market practices. Medium-term notes are assigned long-term ratings.

Issue credit ratings are based, in varying degrees, on S&P's analysis of the following considerations:

- The likelihood of payment—the capacity and willingness of the obligor to meet its financial commitments on an obligation in accordance with the terms of the obligation;
- The nature and provisions of the financial obligation, and the promise S&P imputes; and
- The protection afforded by, and relative position of, the financial obligation in the event of a bankruptcy, reorganization, or other arrangement under the laws of bankruptcy and other laws affecting creditors' rights.

An issue rating is an assessment of default risk but may incorporate an assessment of relative seniority or ultimate recovery in the event of default. Junior obligations are typically rated lower than senior obligations, to reflect lower priority in bankruptcy, as noted above. (Such differentiation may apply when an entity has both senior and subordinated obligations, secured and unsecured obligations, or operating company and holding company obligations.)

NR indicates that a rating has not been assigned or is no longer assigned.

Description of S&P's Long-Term Issue Credit Ratings*

AAA An obligation rated 'AAA' has the highest rating assigned by S&P. The obligor's capacity to meet its financial commitments on the obligation is extremely strong.

AA An obligation rated 'AA' differs from the highest-rated obligations only to a small degree. The obligor's capacity to meet its financial commitments on the obligation is very strong.

A An obligation rated 'A' is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. However, the obligor's capacity to meet its financial commitments on the obligation is still strong.

BBB An obligation rated 'BBB' exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to weaken the obligor's capacity to meet its financial commitments on the obligation.

BB; B; CCC; CC; and C Obligations rated 'BB', 'B', 'CCC', 'CC', and 'C' are regarded as having significant speculative characteristics. 'BB' indicates the least degree of speculation and 'C' the highest. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposure to adverse conditions.

BB An obligation rated 'BB' is less vulnerable to nonpayment than other speculative issues. However, it faces major ongoing uncertainties or exposure to adverse business, financial, or economic conditions that could lead to the obligor's inadequate capacity to meet its financial commitments on the obligation.

B An obligation rated 'B' is more vulnerable to nonpayment than obligations rated 'BB', but the obligor currently has the capacity to meet its financial commitments on the obligation. Adverse business, financial, or economic conditions will likely impair the obligor's capacity or willingness to meet its financial commitments on the obligation.

CCC An obligation rated 'CCC' is currently vulnerable to nonpayment and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitments on the obligation. In the event of adverse business, financial, or economic conditions, the obligor is not likely to have the capacity to meet its financial commitments on the obligation.

CC An obligation rated 'CC' is currently highly vulnerable to nonpayment. The 'CC' rating is used when a default has not yet occurred but S&P expects default to be a virtual certainty, regardless of the anticipated time to default.

C An obligation rated 'C' is currently highly vulnerable to nonpayment, and the obligation is expected to have lower relative seniority or lower ultimate recovery compared with obligations that are rated higher.

D An obligation rated 'D' is in default or in breach of an imputed promise. For non-hybrid capital instruments, the 'D' rating category is used when payments on an obligation are not made on the date due, unless S&P believes that such payments will be made within the next five business days in the absence of a stated grace period or within the earlier of the stated grace period or the next 30 calendar days. The 'D' rating also will be used upon the filing of a bankruptcy petition or the taking of similar action and where default on an obligation is a virtual certainty, for example due to automatic stay provisions. A rating on an obligation is lowered to 'D' if it is subject to a distressed debt restructuring.

* Ratings from 'AA' to 'CCC' may be modified by the addition of a plus (+) or minus (-) sign to show relative standing within the rating categories.

Description of S&P's Short-Term Issue Credit Ratings

A-1 A short-term obligation rated 'A-1' is rated in the highest category by S&P. The obligor's capacity to meet its financial commitments on the obligation is strong. Within this category, certain obligations are designated with a plus sign (+). This indicates that the obligor's capacity to meet its financial commitments on these obligations is extremely strong.

A-2 A short-term obligation rated 'A-2' is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher rating categories. However, the obligor's capacity to meet its financial commitments on the obligation is satisfactory.

A-3 A short-term obligation rated 'A-3' exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to weaken an obligor's capacity to meet its financial commitments on the obligation.

B A short-term obligation rated 'B' is regarded as vulnerable and has significant speculative characteristics. The obligor currently has the capacity to meet its financial commitments; however, it faces major ongoing uncertainties that could lead to the obligor's inadequate capacity to meet its financial commitments.

C A short-term obligation rated 'C' is currently vulnerable to nonpayment and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitments on the obligation.

D A short-term obligation rated 'D' is in default or in breach of an imputed promise. For non-hybrid capital instruments, the 'D' rating category is used when payments on an obligation are not made on the date due, unless S&P believes that such payments will be made within any stated grace period. However, any stated grace period longer than five business days will be treated as five business days. The 'D' rating also will be used upon the filing of a bankruptcy petition or the taking of a similar action and where default on an obligation is a virtual certainty, for example due to automatic stay provisions. A rating on an obligation is lowered to 'D' if it is subject to a distressed debt restructuring.

Description of S&P's Municipal Short-Term Note Ratings

An S&P U.S. municipal note rating reflects S&P's opinion about the liquidity factors and market access risks unique to the notes. Notes due in three years or less will likely receive a note rating. Notes with an original maturity of more than three years will most likely receive a long-term debt rating. In determining which type of rating, if any, to assign, S&P's analysis will review the following considerations:

- Amortization schedule—the larger the final maturity relative to other maturities, the more likely it will be treated as a note; and
- Source of payment—the more dependent the issue is on the market for its refinancing, the more likely it will be treated as a note.

S&P's municipal short-term note ratings are as follows:

SP-1 Strong capacity to pay principal and interest. An issue determined to possess a very strong capacity to pay debt service is given a plus (+) designation.

SP-2 Satisfactory capacity to pay principal and interest, with some vulnerability to adverse financial and economic changes over the term of the notes.

SP-3 Speculative capacity to pay principal and interest.

D 'D' is assigned upon failure to pay the note when due, completion of a distressed debt restructuring, or the filing of a bankruptcy petition or the taking of similar action and where default on an obligation is a virtual certainty, for example due to automatic stay provisions.

Description of Fitch's Credit Ratings

Fitch's credit ratings relating to issuers are forward looking opinions on the relative ability of an entity or obligation to meet financial commitments. Credit ratings relating to securities and obligations of an issuer can include a recovery expectation. Credit ratings are used as indications of the likelihood of repayment in accordance with the terms of the issuance.

Fitch's credit rating scale for issuers and issues is expressed using the categories 'AAA' to 'BBB' (investment grade) and 'BB' to 'D' (speculative grade) with an additional +/- for AA through CCC levels indicating relative differences of probability of default or recovery for issues. The terms "investment grade" and "speculative grade" are market conventions and do not imply any recommendation or endorsement of a specific security for investment purposes. Investment grade categories indicate relatively low to moderate credit risk, while ratings in the speculative grade categories signal either a higher level of credit risk or that a default has already occurred.

Fitch may also disclose issues relating to a rated issuer that are not and have not been rated. Such issues are also denoted as 'NR' on its web page.

Fitch's credit ratings do not directly address any risk other than credit risk. Credit ratings do not deal with the risk of market value loss due to changes in interest rates, liquidity and/or other market considerations. However, market risk may be considered to the extent that it influences the ability of an issuer to pay or refinance a financial commitment. Ratings nonetheless do not reflect market risk to the extent that they influence the size or other conditionality of the obligation to pay upon a commitment (for example, in the case of payments linked to performance of an index).

Credit ratings are indications of the likelihood of repayment in accordance with the terms of the issuance. In limited cases, Fitch may include additional considerations (i.e. rate to a higher or lower standard than that implied in the obligation's documentation).

Description of Fitch's Long-Term Corporate Finance Obligations Ratings

AAA Highest credit quality. 'AAA' ratings denote the lowest expectation of credit risk. They are assigned only in cases of exceptionally strong capacity for payment of financial commitments. This capacity is highly unlikely to be adversely affected by foreseeable events.

AA Very high credit quality. 'AA' ratings denote expectations of very low credit risk. They indicate very strong capacity for payment of financial commitments. This capacity is not significantly vulnerable to foreseeable events.

A High credit quality. 'A' ratings denote expectations of low credit risk. The capacity for payment of financial commitments is considered strong. This capacity may, nevertheless, be more vulnerable to adverse business or economic conditions than is the case for higher ratings.

BBB Good credit quality. 'BBB' ratings indicate that expectations of credit risk are currently low. The capacity for payment of financial commitments is considered adequate, but adverse business or economic conditions are more likely to impair this capacity.

BB Speculative. ‘BB’ ratings indicate an elevated vulnerability to credit risk, particularly in the event of adverse changes in business or economic conditions over time; however, business or financial alternatives may be available to allow financial commitments to be met.

B Highly speculative. ‘B’ ratings indicate that material credit risk is present.

CCC Substantial credit risk. ‘CCC’ ratings indicate that substantial credit risk is present.

CC Very high levels of credit risk. ‘CC’ ratings indicate very high levels of credit risk.

C Exceptionally high levels of credit risk. ‘C’ ratings indicate exceptionally high levels of credit risk.

Ratings in the categories of ‘CCC’, ‘CC’ and ‘C’ can also relate to obligations or issuers that are in default. In this case, the rating does not opine on default risk but reflects the recovery expectation only.

Defaulted obligations typically are not assigned ‘RD’ or ‘D’ ratings, but are instead rated in the ‘CCC’ to ‘C’ rating categories, depending on their recovery prospects and other relevant characteristics. This approach better aligns obligations that have comparable overall expected loss but varying vulnerability to default and loss.

Description of Fitch’s Short-Term Ratings

A short-term issuer or obligation rating is based in all cases on the short-term vulnerability to default of the rated entity and relates to the capacity to meet financial obligations in accordance with the documentation governing the relevant obligation. Short-term deposit ratings may be adjusted for loss severity. Short-Term Ratings are assigned to obligations whose initial maturity is viewed as “short term” based on market convention (a long-term rating can also be used to rate an issue with short maturity). Typically, this means up to 13 months for corporate, sovereign, and structured obligations and up to 36 months for obligations in U.S. public finance markets.

Fitch’s short-term ratings are as follows:

F1 Highest short-term credit quality. Indicates the strongest intrinsic capacity for timely payment of financial commitments; may have an added “+” to denote any exceptionally strong credit feature.

F2 Good short-term credit quality. Good intrinsic capacity for timely payment of financial commitments.

F3 Fair short-term credit quality. The intrinsic capacity for timely payment of financial commitments is adequate.

B Speculative short-term credit quality. Minimal capacity for timely payment of financial commitments, plus heightened vulnerability to near term adverse changes in financial and economic conditions.

C High short-term default risk. Default is a real possibility.

RD Restricted default. Indicates an entity that has defaulted on one or more of its financial commitments, although it continues to meet other financial obligations. Typically applicable to entity ratings only.

D Default. Indicates a broad-based default event for an entity, or the default of a short-term obligation.

APPENDIX B – PROXY VOTING POLICIES AND PROCEDURES

Proxy Voting

Type: Operating Policy	Policy Number: 123.0	Responsible Department: Ethics and Compliance
Origination Date: 8/1/2015	Amended Date: 2/6/2024	Review Cycle: Annually
Approved By: Chief Compliance Officer		
Company: Penn Mutual Asset Management		

<p>Description</p> <p>PMAM provides day-to-day investment management services to clients, which may include the voting of securities held in their accounts. Under the Investment Advisers Act of 1940, the adviser has a duty of care and loyalty with respect to all services undertaken for clients, including proxy voting. Rule 206(4)-6 under the Advisers Act requires that an adviser must vote proxies in a manner consistent with clients’ best interest and must not place its interests above those of its clients when doing so. It requires the adviser to: (i) adopt and implement written policies and procedures that are reasonably designed to ensure that the adviser votes proxies in the best interest of its clients, and (ii) disclose to the clients how they may obtain information on how the adviser voted. In addition, Rule 204-2 requires the adviser to keep records of proxy voting and client requests for information.</p> <p>PMAM has adopted related procedures to address proxy voting. The following procedures are reasonably designed to ensure that PMAM votes securities held in those client accounts in the best interests of the client. PMAM has retained an independent firm (Service Provider) to assist it in voting the securities, if necessary. The Service Provider specializes in providing proxy advisory and voting services. These services include in-depth research, analysis, voting recommendations, as well as vote execution, reporting, auditing and consulting assistance for the handling of proxy voting responsibility and corporate governance. Securities generally will be voted in accordance with the guidelines set forth by the Service Provider, except as set forth below with respect to proxies of affiliated mutual funds, and as PMAM may otherwise determine in the exercise of its fiduciary duty to its clients. Except with respect to proxies of affiliated mutual funds, the appropriate Portfolio Manager will review all voting recommendations made by the Service Provider with respect to securities for which PMAM has voting authority, including recommendations on voting for or against proposals described in the guidelines. If the Portfolio Manager determines that it is in the interest of a client account to vote securities differently than the recommendation made by the Service Provider, the Portfolio Manager will fully document the reasons for voting the securities differently in a memorandum to the Chief Compliance Officer.</p> <p>Upon receipt of the memorandum, PMAM will direct the Service Provider to vote the securities in accordance with the determination made by the Portfolio Manager. In providing proxy advisory and voting services to PMAM, the Service Provider observes policies and procedures that address potential conflicts between the interests of PMAM client accounts and the interests of the Service Provider and its affiliates. PMAM relies, to a large extent, on the independence of the Service Provider, and the policies, procedures and practices it has in place, to avoid voting on any proposal that may be inappropriate because of conflict of interest. In addition, Portfolio Managers and the Chief Compliance Officer monitor the voting of securities that may present a conflict between the interests of a client and the interest of PMAM and its affiliates. PMAM is sensitized to the fact that any business or other relationship between PMAM (or any of its affiliates) and a company whose securities are to be voted could improperly influence a manager’s determination to vote the securities differently than recommended by the Service Provider. Except with respect to proxies of affiliated mutual funds, any potential conflict of interest identified by a Portfolio Manager is immediately referred to the Chief Compliance Officer for immediate resolution. With respect to proxies of an affiliated fund, such as the portfolios of the Funds, PMAM will vote such proxies in the same proportion as the vote of all other shareholders of the fund (i.e., “echo vote”), unless otherwise required by law. PMAM, acting on its own behalf or acting through the Service Provider, will provide a description of its proxy voting policies and procedures to its clients, and will inform its clients as to how they may obtain information on how PMAM voted their securities. PMAM, on its own behalf or acting through the Service Provider, will retain for a period of not less than six years its: (i) proxy voting policies and procedures, (ii) proxy statements that PMAM receives regarding client securities, (iii) records of votes casts on behalf of clients, (iv) any document prepared on behalf of PMAM that was material to making the determination of how to vote securities and (v) a copy of each written request for proxy voting information, and a copy of any written response made by or on behalf of PMAM to any request (oral or written) for proxy voting information.</p>
